Journal of Molecular Biology

Editor-in-Chief
P. Wright
Department of Molecular Biology, The Scripps Research Institute
10666 N. Torrey Pines Road, La Jolla, CA 92037, U.S.A.

Assistant Editor
J. Karn
MRC Laboratory of Molecular Biology
Hills Road, Cambridge CB2 2QH, U.K.

Founding Editor
Sir John Kendrew

Consulting Editor
Sydney Brenner

Editors

. *R. Fersht,* University Chemical Laboratory, Cambridge University, Lensfield Road, Cambridge CB2 1EW, U.K.
. *Gottesman,* Institute of Cancer Research, College of Physicians & Surgeons of Columbia University, 701 W. 168th Street, New York, NY 10032, U.S.A.
. *von Hippel,* Institute of Molecular Biology, University of Oregon, Eugene, OR 97403–1229, U.S.A.
. *Huber,* Max-Planck-Institut für Biochemie, 8033 Martinsried bei München, Germany.
. *Klug,* MRC Laboratory of Molecular Biology, Hills Road, Cambridge CB2 2QH, U.K.
. *Yaniv,* Department of Biotechnology, Pasteur Institute, 25 rue de Dr Roux, 75724 Paris Cedex 15, France.

Associate Editors

.-*H. Chua,* The Rockefeller University, 1230 York Avenue, New York, NY 10021, U.S.A.
. *E. Cohen,* Department of Pharmaceutical Chemistry, School of Pharmacy, University of California, San Francisco, CA 94143–0446, U.S.A.
. *J. DeRosier,* Rosenstiel Basic Medical Sciences Research Center, Brandeis University, Waltham, MA 02254, U.S.A.

Editorial Office

Harris, Journal of Molecular Biology, 10d St Edward's Passage, Cambridge CB2 3PJ, U.K.

URNAL OF MOLECULAR BIOLOGY: ISSN 0022–2836. Volumes 229–234, 1993, published twice a month on the
and 20th by Academic Press at 24–28 Oval Road, London NW1 7DX, England. Annual subscription price including
stage: £1008 U.K. and Europe and U.S.$1860 elsewhere. Personal subscription rate: £252 U.K. and Europe and U.S.
)9 elsewhere. Subscription orders should be sent to Academic Press Limited, Foots Cray, Sidcup, Kent DA14 5HP,
K. (Tel: 081–300 3322). Send notices of changes of address to the publisher at least 6–8 weeks in advance, including
h old and new addresses.

yers in Canada should add GST at the current rate of 7%.

ond class postage rate paid at Jamaica, NY 11431, U.S.A.

freight and mailing in the U.S.A. by Publications Expediting Inc., 200 Meacham Avenue, Elmont, NY 11003, U.S.A.

S.A. POSTMASTERS: send change of addresses to JOURNAL OF MOLECULAR BIOLOGY, c/o Publications
pediting, Inc., 200 Meacham Avenue, Elmont, NY 11003, U.S.A.
nted in U.K.

List of Contents Volume 223

Number 1, 5 January 1992

ommunications

ene Organization Deduced from the Complete equence of Liverwort *Marchantia polymorpha* itochondrial DNA. Primitive Form of Plant itochondrial Genome — **K. Oda, K. Yamato, E. Ohta, Y. Nakamura, M. Takemura, N. Nozato, K. Akashi, T. Kanegae, Y. Ogura, T. Kohchi and K. Ohyama** — 1–7

ar to Normal UGA Translation by the elenocysteine tRNA — **W-q. Li and M. Yarus** — 9–15

inigene Rescues Acetylcholinesterase Lethal utations in *Drosophila melanogaster* — **F. Hoffmann, D. Fournier and P. Spierer** — 17–22

TPase Activity of Bacteriophage T4 Sheath rotein — **I. I. Serysheva, A. I. Tourkin, I. V. Bartish and B. F. Poglazov** — 23–25

terdomain Salt Bridges Modulate igand-induced Domain Motion of the Sulfate eceptor Protein for Active Transport — **B. L. Jacobson, J. J. He, D. D. Lemon and F. A. Quiocho** — 27–30

rticles

eftward Ribosome Frameshifting at a Hungry odon — **J. A. Gallant and D. Lindsley** — 31–40

echanism of Post-segregational Killing by the *k/sok* System of Plasmid R1. Sok Antisense NA Regulates *hok* Gene Expression Indirectly rough the Overlapping *mok* Gene — **T. Thisted and K. Gerdes** — 41–54

irect Interaction Between Two *Escherichia coli* anscription Antitermination Factors, NusB and ibosomal Protein S10 — **S. W. Mason, J. Li and J. Greenblatt** — 55–66

ucleosome Arrays Inhibit Both Initiation and ongation of Transcripts by Bacteriophage T7 NA Polymerase — **T. E. O'Neill, M. Roberge and E. M. Bradbury** — 67–78

ecA Protein-promoted Homologous Pairing and rand Exchange between Intact and Partially ngle-stranded Duplex DNA — **S. A. Chow, S.-K. Chiu and B. C. Wong** — 79–93

nall Single-copy Region of Plastid DNA in the on-photosynthetic Angiosperm *Epifagus giniana* Contains Only Two Genes. Differences nong Dicots, Monocots and Bryophytes in Gene ganization at a Non-bioenergetic Locus — **K. H. Wolfe, C. W. Morden and J. D. Palmer** — 95–104

hibitory Effects of N and C-Terminal Truncated *cherichia coli recA* Gene Products on Functions the Wild-type *recA* Gene — **T. Horii, N. Ozawa, T. Ogawa and H. Ogawa** — 105–114

Terminal Truncated *Escherichia coli* RecA otein RecA5327 Has Enhanced Binding finities to Single- and Double-stranded DNAs — **S. Tateishi, T. Horii, T. Ogawa and H. Ogawa** — 115–129

rect Evidence for the Effect of Transcription on cal DNA Supercoiling *in Vivo* — **A. R. Rahmouni and R. D. Wells** — 131–144

ecificity of Origin Recognition by Replication itiator Protein in Plasmids of the pT181 Family Determined by a Six Amino Acid Residue Element — **P.-Z. Wang, S. J. Projan, V. Henriquez and R. P. Novick** — 145–158

pectation Maximization Algorithm for ntifying Protein-binding Sites with Variable ngths from Unaligned DNA Fragments — **L. R. Cardon and G. D. Stormo** — 159–170

Substructure of the Flagellar Basal Body of *Salmonella typhimurium*	**G. E. Sosinsky, N. R. Francis, M. J. B. Stallmeyer and D. J. DeRosier**	171–18
Transients in Orientation of a Fluorescent Cross-bridge Probe Following Photolysis of Caged Nucleotides in Skeletal Muscle Fibres	**J. W. Tanner, D. D. Thomas and Y. E. Goldman**	185–20
Effect of Dimerization on the Conformation of the Encapsidation Psi Domain of Moloney Murine Leukemia Virus RNA	**N. Tounekti, M. Mougel, C. Roy, R. Marquet, J.-L. Darlix, J. Paoletti, B. Ehresmann and C. Ehresmann**	205–22
Mutational Analysis of the Pseudoknot in the tRNA-like Structure of Turnip Yellow Mosaic Virus RNA. Aminoacylation Efficiency and RNA Pseudoknot Stability	**R. M. W. Mans, M. H. Van Steeg, P. W. G. Verlaan, C. W. A. Pleij and L. Bosch**	221–23
Sequence and Structure of the Catalytic RNA of Hepatitis Delta Virus Genomic RNA	**H.-N. Wu, Y.-J. Wang, C.-F. Hung, H.-J. Lee and M. M. C. Lai**	233–24
Model for the Differential Stabilities of Rhinovirus and Poliovirus to Mild Acidic pH, Based on Electrostatics Calculations	**J. Warwicker**	247–25
Structure Refinement of the Chromomycin Dimer–DNA Oligomer Complex in Solution	**X. Gao, P. Mirau and D. J. Patel**	259–27
Refined Solution Structure and Ligand-binding Properties of PDC-109 Domain b. A Collagen-binding Type II Domain	**K. L. Constantine, M. Madrid, L. Bányai, M. Trexler, L. Patthy and M. Llinás**	281–29
Computing the Geometry of a Molecule in Dihedral Angle Space Using n.m.r.-derived Constraints. A New Algorithm Based on Optimal Filtering	**P. Koehl, J.-F. Lefèvre and O. Jardetzky**	299–31
Structure of a Ternary Complex of an Allosteric Lactate Dehydrogenase from *Bacillus stearothermophilus* at 2·5 Å Resolution	**D. B. Wigley, S. J. Gamblin, J. P. Turkenburg, E. J. Dodson, K. Piontek, H. Muirhead and J. J. Holbrook**	317–33
Evolutionary Conservativeness of Electric Field in the Cu,Zn Superoxide Dismutase Active Site. Evidence for Co-ordinated Mutation of Charged Amino Acid Residues	**A. Desideri, M. Falconi, F. Polticelli, M. Bolognesi, K. Djinovic and G. Rotilio**	337–34
Energetic Contribution of Solvent-exposed Ion Pairs to Alpha-helix Structure	**P. C. Lyu, P. J. Gans and N. R. Kallenbach**	343–35
Circle Reopening in the *Tetrahymena* Ribozyme Resembles Site-specific Hydrolysis at the 3′ Splice Site	**J. Sanders and P. Towner**	351–36
Solution Studies of Elongation Factor Tu from the Extreme Halophile *Halobacterium marismortui*	**C. Ebel, F. Guinet, J. Langowski, C. Urbanke, J. Gagnon and G. Zaccai**	361–37
Crystallization Notes		
Crystallization and Preliminary X-ray Investigation of Proteinase A, a Non-pepsin-type Acid Proteinase from *Aspergillus niger* var. *macrosporus*	**M. Tanokura, H. Matsuzaki, S. Iwata, A. Nakagawa, T. Hamaya, T. Takizawa and K. Takahashi**	373–37
Crystallization and Preliminary Crystallographic Data on *Escherichia coli* TEM1 β-Lactamase	**C. Jelsch, F. Lenfant, J. M. Masson and J. P. Samama**	377–38
Crystallization of the Fab Fragments of Anti-peptide Monoclonal Antibodies and a Complex with Peptide	**R. E. Griest, P. D. Jeffrey, G. L. Taylor and A. R. Rees**	381–38

equence Notes

ene Conversions Within the Skeletal Myosin ultigene Family — L. A. Moore, W. E. Tidyman, M. J. Arrizubieta and E. Bandman — 383–387

uthor Index — 389

Number 2, 20 January 1992

ommunications

lectron Microscopy of the Actin–Myosin Head omplex in the Presence of ATP — L.-L. Frado and R. Craig — 391–397

rticles

echanism of Initiation of Transcription by *acillus subtilis* RNA Polymerase at Several romoters — F. W. Whipple and A. L. Sonenshein — 399–414

enetic and Functional Analysis of the Basic eplicon of pPS10, a Plasmid Specific for *seudomonas* Isolated from *Pseudomonas syringae utovar savastanoi* — C. Nieto, R. Giraldo, E. Fernández-Tresguerres and R. Diaz — 415–426

rystal Structure of the Alkaline Proteinase uvinase™ from *Bacillus lentus* at 1·4 Å esolution — C. Betzel, S. Klupsch, G. Papendorf, S. Hastrup, S. Branner and K. S. Wilson — 427–445

rystallization and Preliminary X-ray Analysis of omplexes of Peptide Inhibitors with Human ecombinant and Mouse Submandibular Renins — M. Badasso, C. Frazao, B. L. Sibanda, V. Dhanaraj, C. DeAlwis, J. B. Cooper, S. P. Wood, T. L. Blundell, K. Murakami, H. Miyazaki, P. M. Hobart, K. F. Geoghegan, M. J. Ammirati, A. J. Lanzetti, D. E. Danley, B. A. O'Connor, D. J. Hoover, J. Sueiras-Diaz, D. M. Jones and M. Szelke — 447–453

vestigations on the Dynamic Structures of denine- and Thymine-containing DNA — S. Brahms, V. Fritsch, J. G. Brahms and E. Westhof — 455–476

ree-dimensional Structure of the Bifunctional nzyme Phosphoribosylanthranilate Isomerase: doleglycerolphosphate Synthase from *Escherichia li* Refined at 2·0 Å Resolution — M. Wilmanns, J. P. Priestle, T. Niermann and J. N. Jansonius — 477–507

nergy-optimized Structure of Antifreeze Protein d Its Binding Mechanism — K.-C. Chou — 509–517

olecular Dynamics Simulation of the DNA iplex $d(TC)_5 \cdot d(GA)_5 \cdot d(C^+T)_5$ — C. A. Laughton and S. Neidle — 519–529

Trefoil Fold. Patterns of Structure and Sequence the Kunitz Inhibitors Interleukins-1β and 1α d Fibroblast Growth Factors — A. G. Murzin, A. M. Lesk and C. Chothia — 531–543

ssociation of a Native Dimer to a Molten obule Monomer. Effects of Pressure and Dilution the Association Equilibrium of Arc Repressor — J. L. Silva, C. F. Silveira, A. Correia, Jr and L. Pontes — 545–555

biquitous Soluble Mg^{2+}–ATPase Complex. Structural Study — J.-M. Peters, J. R. Harris, A. Lustig, S. Müller, A. Engel, S. Volker and W. W. Franke — 557–571

Crystallization Notes

Crystal Structure of the Complex between Carboxypeptidase A and the Biproduct Analog Inhibitor L-Benzylsuccinate at 2·0 Å Resolution — **S. Mangani, P. Carloni and P. Orioli** — 573–57

Two Crystal Forms of the Lentil Lectin Diffract to High Resolution — **R. Loris, J. Lisgarten, D. Maes, R. Pickersgill, F. Körber, C. Reynolds and L. Wyns** — 579–58

Erratum — 58

Author Index — 58

Number 3, 5 February 1992

Communications

N-Methyl-*N*-nitrosourea-induced Mutations in Human Cells. Effects of the Transcriptional Activity of the Target Gene — **F. Palombo, E. Kohfeldt, A. Calcagnile, P. Nehls and E. Dogliotti** — 587–59

Fidelity of Human Immunodeficiency Virus Type I Reverse Transcriptase in Copying Natural RNA — **A. Hübner, M. Kruhoffer, F. Grosse and G. Krauss** — 595–60

Proline *Cis-Trans* Isomers in Calbindin D_{9k} Observed by X-ray Crystallography — **L. A. Svensson, E. Thulin and S. Forsén** — 601–60

Articles

T4 Endonuclease VII Resolves Cruciform DNA with Nick and Counter-nick and Its Activity is Directed by Local Nucleotide Sequence — **S. Pottmeyer and B. Kemper** — 607–61

Base alterations in Yeast Induced by Alkylating Agents with Differing Swain–Scott Substrate Constants — **G. S.-F. Lee, K. S. Blonsky, D. Lee Van On, E. A. Savage, A. R. Morgan and R. C. von Borstel** — 617–62

Spectrum of Spontaneously Occurring Mutations in the *hprt* Gene of V79 Chinese Hamster Cells — **L.-H. Zhang, H. Vrieling, A. A. van Zeeland and D. Jenssen** — 627–63

Identification of a Nonapeptide Motif in the Vimentin Head Domain Involved in Intermediate Filament Assembly — **H. Herrmann, I. Hofmann and W. W. Franke** — 637–64

Site-directed Mutagenesis Studies on the Binding of the Globular Domain of Linker Histone H5 to the Nucleosome — **R. S. Buckle, J. D. Maman and J. Allan** — 651–65

Helical Reconstruction of Frozen–Hydrated Scallop Myosin Filaments — **P. Vibert** — 661–66

Metal Ion-induced Conformational Changes of Phosphorylated Fragments of Human Neurofilament (NF–M) Protein — **M. Hollósi, L. Ürge, A. Perczel, J. Kajtár, I. Teplán, L. Ötvös, Jr and G. D. Fasman** — 673–68

Crystal and Molecular Structure of Human Annexin V after Refinement. Implications for Structure, Membrane Binding and Ion Channel Formation of the Annexin Family of Proteins — **R. Huber, R. Berendes, A. Burger, M. Schneider, A. Karshikov, H. Luecke, J. Römisch and E. Paques** — 683–77

Crystal Structure of the Unique Parvalbumin Component from Muscle of the Leopard Shark (*Triakis semifasciata*). The First X-ray Study of an α-Parvalbumin — **F. Roquet, J.-P. Declercq, B. Tinant, J. Rambaud and J. Parello** — 705–77

efined Structure of Elongation Factor EF-Tu om *Escherichia coli* — M. Kjeldgaard and J. Nyborg — 721–742

etermination of the Nuclear Magnetic Resonance olution Structure of the DNA-binding Domain Residues 1 to 69) of the 434 Repressor and omparison with the X-ray Crystal Structure — D. Neri, M. Billeter and K. Wüthrich — 743–767

hermodynamics of Unfolding of the α-Amylase nhibitor Tendamistat. Correlations Between ccessible Surface Area and Heat Capacity — M. Renner, H.-J. Hinz, M. Scharf and J. W. Engels — 769–779

hermodynamics of DNA Branching — M. Lu, Q. Guo, L. A. Marky, N. C. Seeman and N. R. Kallenbach — 781–789

ocation of Potential Binding Sites on Deoxy emoglobin for the Design of Antigelling Agents — P. Manavalan, M. Prabhakaran and M. E. Johnson — 791–800

ole of Residue Glu152 in the Discrimination etween Transfer RNAs by Tyrosyl-tRNA ynthetase from *Bacillus stearothermophilus* — A. Vidal-Cros and H. Bedouelle — 801–810

equence Notes

MC Oxidoreductases. A Newly Defined Family of omologous Proteins with Diverse Catalytic ctivities — D. R. Cavener — 811–814

uthor Index — 815–816

Number 4, 20 February 1992

ommunications

ntramolecular dG·dG·dC Triplex Detected in *scherichia coli* Cells — Y. Kohwi, S. R. Malkhosyan and T. Kohwi-Shigematsu — 817–822

enetical and Biochemical Evidence for the nvolvement of the Coprotease Domain of *scherichia coli* RecA Protein in Recombination — C. Cazaux and M. Defais — 823–829

reformed Ribozyme Destroys Tumour Necrosis actor mRNA in Human Cells — M. Sioud, J. B. Natvig and O. Førre — 831–835

wo Independent Amsacrine-resistant Human yeloid Leukemia Cell Lines Share an Identical oint Mutation in the 170 kDa Form of Human opoisomerase II — M.-S. Lee, J. C. Wang and M. Beran — 837–843

rthogonal $\beta\beta$ Motifs in Proteins — R. Sowdhamini, N. Srinivasan, C. Ramakrishnan and P. Balaram — 845–851

ocalization of Bound Water in the Solution tructure of the Immunoglobulin Binding Domain f Streptococcal Protein G. Evidence for Solvent-duced Helical Distortion in Solution — G. M. Clore and A. M. Gronenborn — 853–856

rticles

pecific Interaction of the First Three Zinc Fingers f TFIIIA with the Internal Control Region of the *enopus* 5 S RNA Gene — X. Liao, K. R. Clemens, L. Tennant, P. E. Wright and J. M. Gottesfeld — 857–871

roximal Sequence Element Factor Binding and pecies Specificity in Vertebrate U6 snRNA romoters — K. A. Simmen, R. Waldschmidt, J. Bernués, H. D. Parry, K. H. Seifart and I. W. Mattaj — 873–884

Transcription Factor eUSF is an Essential Component of Isolated Transcription Complexes on the Duck Histone H5 Gene and it Mediates the Interaction of TFIID with a TATA-Deficient Promoter	**J. Bungert, I. Kober, F. Düring and K. H. Seifart**	885–89
Functional Analysis of Internal Transcribed Spacer 2 of *Saccharomyces cerevisiae* Ribosomal DNA	**C. A. F. M. van der Sande, M. Kwa, R. W. van Nues, H. van Heerikhuizen, H. A. Raué and R. J. Planta**	899–9
Identification of Cryptic *lox* Sites in the Yeast Genome by Selection for Cre-mediated Chromosome Translocations that Confer Multiple Drug Resistance	**B. Sauer**	911–9
Membrane Topology and Quaternary Structure of Cardiac Gap Junction Ion Channels	**M. Yeager and N. B. Gilula**	929–9
Basis of Unique Red Cell Membrane Properties in Hereditary Ovalocytosis	**A. E. Schofield, M. J. A. Tanner, J. C. Pinder, B. Clough, P. M. Bayley, G. B. Nash, A. R. Dluzewski, D. M. Reardon, T. M. Cox, R. J. M. Wilsor and W. B. Gratzer**	949–9
Oxidation State-dependent Conformational Changes in Cytochrome *c*	**A. M. Berghuis and G. D. Brayer**	959–9
Bacteriophage P1 Genes Involved in the Recognition and Cleavage of the Phage Packaging Site (*pac*)	**K. Skorupski, J. C. Pierce, B. Sauer and N. Sternberg**	977–9
Mutant Prohead RNAs in the *in Vitro* Packaging of Bacteriophage ϕ29 DNA–gp3	**J. Wichitwechkarn, D. Johnson and D. Anderson**	991–9
Conformation of DNA Packaged in Bacteriophage T7. Analysis by use of Ultraviolet Light-induced DNA–Capsid Cross-linking	**P. Serwer, S. J. Hayes and R. H. Watson**	999–10
Three-dimensional Structure of a Mutant Ribonuclease T_1 (Y45W) Complexed with Non-cognizable Ribonucleotide, 2′AMP and Its Comparison with a Specific Complex with 2′GMP	**T. Hakoshima, T. Itoh, K.-i. Tomita, K. Goda, S. Nishikawa, H. Morioka, S.-i. Uesugi, E. Ohtsuka and M. Ikehara**	1013–10
Structural Details of Ribonuclease H from *Escherichia coli* as Refined to an Atomic Resolution	**K. Katayanagi, M. Miyagawa, M. Matsushima, M. Ishikawa, S. Kanaya, H. Nakamura, M. Ikehara, T. Matsuzaki and K. Morikawa**	1029–10
Sequence Alignment Approach to Pick Up Conformationally Similar Protein Fragments	**A. S. Kolaskar and U. Kulkarni-Kale**	1053–10
Use of Binding Site Neighbor-effect Parameters to Evaluate the Interactions between Adjacent Ligands on a Linear Lattice. Effects on Ligand–Lattice Association	**A. R. Wolfe and T. Meehan**	1063–10
Supercoiled DNA Energetics and Dynamics by Computer Simulation	**T. Schlick and W. K. Olson**	1089–11
Molecular Dynamics Simulations of Helix Denaturation	**V. Daggett and M. Levitt**	1121–11
Thermodynamic Characterization of Cytochrome *c* at Low pH. Observation of the Molten Globule State and of the Cold Denaturation Process	**Y. Kuroda, S.-i. Kidokoro and A. Wada**	1139–11
Two-dimensional Crystals of *Escherichia coli* Maltoporin and Their Interaction with the Maltose-binding Protein	**K. A. Stauffer, A. Hoenger and A. Engel**	1155–1

rystallization Notes

'ystallization and Preliminary X-ray Diffraction udies of a Deglycosylated Glucose Oxidase from *enicillium amagasakiense* — **J. Hendle, H.-J. Hecht, H. M. Kalisz, R. D. Schmid and D. Schomburg** — 1167–1169

'ystallization and Preliminary X-ray Diffraction udies of Coxsackievirus B1 — **T. Li, A. Zhang, N. Iizuka, A. Nomoto and E. Arnold** — 1171–1175

'ystallization of β-Galactosidase from *Escherichia li* — **R. H. Jacobson and B. W. Matthews** — 1177–1182

'ystallization and Preliminary X-ray vestigation of a Ubiquitin Carrier Protein (E2) om *Arabidopsis thaliana* — **W. J. Cook, L. C. Jeffrey, M. L. Sullivan and R. D. Vierstra** — 1183–1186

uthor Index — 1187–1188

List of Contents Volume 224

Number 1, 5 March 1992

ommunications

anging the Specificity of the Sorting Receptor Luminal Endoplasmic Reticulum Proteins — **J. C. Semenza and H. R. B. Pelham** — 1–5

mputer Simulation of the Initial Proton ansfer Step in Human Carbonic Anhydrase I — **J. Åqvist and A. Warshel** — 7–14

rticles

gulation of Open Complex Formation at the *cherichia coli* Galactose Operon Promoters. nultaneous Interaction of RNA Polymerase, *gal* pressor and CAP/cAMP — **J. A. Goodrich and W. R. McClure** — 15–29

rameters Affecting Transcription Termination *Escherichia coli* RNA Polymerase. I. Analysis 13 Rho-independent Terminators — **R. Reynolds, R. M. Bermúdez-Cruz and M. J. Chamberlin** — 31–51

rameters Affecting Transcription Termination *Escherichia coli* RNA. II. Construction and alysis of Hybrid Terminators — **R. Reynolds and M. J. Chamberlin** — 53–63

ray Diffraction Studies on Oriented Gels of rtebrate Smooth Muscle Thin Filaments — **D. Popp and K. C. Holmes** — 65–76

gnal Sequences Containing Multiple Aromatic sidues — **S. L. Rusch and D. A. Kendall** — 77–85

lecular Analysis of the *Bacillus subtilis* cteriophage SPP1 Region Encompassing Genes o *6*. The Products of Gene *1* and Gene *2* are quired for *pac* Cleavage — **S. Chai, A. Bravo, G. Lüder, A. Nedlin, T. A. Trautner and J. C. Alonso** — 87–102

ree-dimensional Structure of T3 Connector rified from Overexpressing Bacteria — **J. M. Valpuesta, H. Fujisawa, S. Marco, J. M. Carazo and J. L. Carrascosa** — 103–112

ucture Determination and Refinement of vine Lens Leucine Aminopeptidase and its mplex with Bestatin — **S. K. Burley, P. R. David, R. M. Sweet, A. Taylor and W. N. Lipscomb** — 113–140

Three-dimensional Structure of Porcine Pancreatic Procarboxypeptidase A. A Comparison of the A and B Zymogens and their Determinants for Inhibition and Activation	**A. Guasch, M. Coll, F. X. Avilés and R. Huber**	141–15
Structure of the Complex Between Adenylate Kinase from *Escherichia coli* and the Inhibitor Ap_5A Refined at 1·9 Å Resolution. A Model for a Catalytic Transition State	**C. W. Müller and G. E. Schulz**	159–17
Refined Crystal Structure of Ascorbate Oxidase at 1·9 Å Resolution	**A. Messerschmidt, R. Ladenstein, R. Huber, M. Bolognesi, L. Avigliano, R. Petruzzelli, A. Rossi and A. Finazzi-Agró**	179–20
Conformational Interconversion in Protein Crystals	**L. Zhu, J. T. Sage, A. A. Rigos, D. Morikis and P. M. Champion**	207–21
Kinetic Coupling between Protein Folding and Prolyl Isomerization. I. Theoretical Models	**T. Kiefhaber, H.-H. Kohler and F. X. Schmid**	217–21
Kinetic Coupling between Protein Folding and Prolyl Isomerization. II. Folding of Ribonuclease A and Ribonuclease T_1	**T. Kiefhaber and F. X. Schmid**	231–21
Effects of Glycosylation on the Folding and Stability of Human, Recombinant and Cleaved α_1-Antitrypsin	**L. M. Powell and R. H. Pain**	241–21
Comparison of X-ray Structures of the Nucleosome Core Particle in Two Different Hydration States	**M.-M. Struck, A. Klug and T. J. Richmond**	253–21

Crystallization Notes

Newly Observed Binding Mode in Pancreatic Ribonuclease	**C. F. Aguilar, P. J. Thomas, A. Mills, D. S. Moss and R. A. Palmer**	265–21
Crystallization and Preliminary X-ray Investigation of *Escherichia coli* Porphobilinogen Deaminase	**P. M. Jordan, M. J. Warren, B. I. A. Mgbeje, S. P. Wood, J. B. Cooper, G. Louie, P. Brownlie, R. Lambert and T. L. Blundell**	269–21
Crystallization and Preliminary X-ray Diffraction Studies of Mitochondrial Short-chain Δ^3,Δ^2-Enoyl-CoA Isomerase from Rat Liver	**J. Ph. Zeelen, R. A. Pauptit, R. K. Wierenga, W.-H. Kunau and J. K. Hiltunen**	273–2
Crystallization and Preliminary Crystallographic Studies of the FAD Domain of Corn NADH : Nitrate Reductase	**G. Lu, W. Campbell, Y. Lindqvist and G. Schneider**	277–2
Crystallization and Preliminary X-ray Study of a Lipase from *Pseudomonas glumae*	**A. Cleasby, E. Garman, M. R. Egmond and M. Batenburg**	281–2
Crystallization and Initial X-ray Analysis of the C_2-subunit of Crustacyanin	**C. E. Wright, J. B. Rafferty, D. R. Flower, C. R. Groom, J. B. C. Findlay, A. C. T. North, S. E. V. Phillips and P. F. Zagalsky**	283–2

icles

uctural Analysis of Ternary Complexes of *herichia coli* RNA Polymerase. Individual nplexes Halted along Different Transcription ts Have Distinct and Unexpected Biochemical perties — B. Krummel and M. J. Chamberlin — 221–237

uctural Analysis of Ternary Complexes of *herichia coli* RNA Polymerase. xyribonuclease I Footprinting of Defined nplexes — B. Krummel and M. J. Chamberlin — 239–250

thesis and Degradation of the mRNA of the *1 mer* Operon — B. D. Gambill and A. O. Summers — 251–259

uence of Codon Context on UGA Suppression Readthrough — J. Kopelowitz, C. Hampe, R. Goldman, M. Reches and H. Engelberg-Kulka — 261–269

tral Domain of the Positive Control Protein A and Its Role in Transcriptional Activation — W. Cannon and M. Buck — 271–286

trol of Adenovirus Major Late Gene pression at Multiple Levels — S. Larsson, C. Svensson and G. Akusjärvi — 287–298

racterization of the F Plasmid Mating regation Gene *traN* and of a New F Transfer ion Locus *trbE* — S. Maneewannakul, P. Kathir and K. Ippen-Ihler — 299–311

agenesis of a Conserved Region of the Gene oding the FLP Recombinase of *Saccharomyces visiae*. A Role for Arginine 191 in Binding and tion — H Friesen and P. D. Sadowski — 313–326

BC: a Multisubunit GTP-dependent Restriction onuclease — E. Sutherland, L. Coe and E. A. Raleigh — 327–348

piani Ring 1 Gene in *Chironomus tentans*. uence Organization and Dynamics of a Coding isatellite — G. Paulsson, C. Höög, K. Bernholm and L. Wieslander — 349–361

dicting Protein Secondary Structure Using ral Net and Statistical Methods — P. Stolorz, A. Lapedes and Y. Xia — 363–377

cture of a *B*-DNA Decamer with a Central Step: C-G-A-T-T-A-A-T-C-G — J. R. Quintana, K. Grzeskowiak, K. Yanagi and R. E. Dickerson — 379–395

Three-dimensional Structures of Bulge-containing DNA Fragments	**L. Joshua-Tor, F. Frolow, E. Appella, H. Hope, D. Rabinovich and J. L. Sussman**	397–
Comparison of the Solution Conformations of Human [Zn_7]-metallothionein-2 and [Cd_7]-metallothionein-2 using Nuclear Magnetic Resonance Spectroscopy	**B. A. Messerle, A. Schäffer, M. Vašák, J. H. R. Kägi and K. Wüthrich**	433–
Crystal Structure of the 2 : 1 Complex Between d(GAAGCTTC) and the Anticancer Drug Actinomycin D	**S. Kamitori and F. Takusagawa**	445–
Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. I. Theory and Test by Simulated Diffraction Data	**A. Kidera and N. Gō**	457–
Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. II. Application to Human Lysozyme	**A. Kidera, K. Inaka, M. Matsushima and N. Gō**	477–
Membrane Protein Structure Prediction. Hydrophobicity Analysis and the Positive-inside Rule	**G. von Heijne**	487–
X-ray Structure Refinement and Comparison of Three Forms of Mitochondrial Aspartate Aminotransferase	**C. A. McPhalen, M. G. Vincent and J. N. Jansonius**	495–
Optimal Protocol and Trajectory Visualization for Conformational Searches of Peptides and Proteins	**R. Abagyan and P. Argos**	519–
RNase T_1 Mutant Glu46Gln Binds the Inhibitors 2′GMP and 2′AMP at the 3′ Subsite	**J. Granzin, R. Puras-Lutzke, O. Landt, H.-P. Grunert, U. Heinemann, W. Saenger and U. Hahn**	533–
Crystal Structures of Phosphate, Iodide and Iodate-inhibited Phospholipase C from *Bacillus cereus* and Structural Investigations of the Binding of Reaction Products and a Substrate Analogue	**S. Hansen, L. K. Hansen and E. Hough**	543–
Temperature Dependence of the Kinetics of the Urea-induced Dissociation of Human Plasma α_2-Macroglobulin into Half-molecules. A Minimum Rate at 15°C Indicates Hydrophobic Interaction between the Subunits	**B. Sjöberg, S. Pap and K. Mortensen**	551–

Crystallization Notes

Crystallization and Preliminary X-ray Diffraction Studies of the Cobalamin-binding Domain of Methionine Synthase from *Escherichia coli*	**C. L. Luschinsky, J. T. Drummond, R. G. Matthews and M. L. Ludwig**	557–
Preliminary Crystallographic Data for Stearoyl-acyl Carrier Protein Desaturase from Castor Seed	**G. Schneider, Y. Lindqvist, J. Shanklin and C. Somerville**	561–
Crystallization of an Endochitinase from *Hordeum vulgare* L. Seeds	**P. J. Hart, M. P. Ready and J. D. Robertus**	565–

Sequence Note

Genes Encoding a Histone H3.3-like Variant in *Arabidopsis* Contain Intervening Sequences	**N. Chaubet, B. Clement and C. Gigot**	569–

Author Index

Number 3, 5 June 1992

mmunications

tant Conformation of p53. Precise Epitope pping Using a Filamentous Phage Epitope rary	**C. W. Stephen and D. P. Lane**	577–583
fect of Active Site Residues in Barnase on tivity and Stability	**E. M. Meiering, L. Serrano and A. R. Fersht**	585–589

ticles

A Supercoiling Response of the σ^{54}-dependent *bsiella pneumoniae nifL* Promoter *in Vitro*	**S. Whitehall, S. Austin and R. Dixon**	591–607
lation and Characterization of LexA Mutant pressors with Enhanced DNA Binding Affinity	**P. Oertel-Buchheit, D. Porte, M. Schnarr and M. Granger-Schnarr**	609–620
lf-site Recombinations Mediated by Yeast e-specific Recombinases Flp and R	**M.-C. Serre, B. R. Evans, H. Araki, Y. Oshima and M. Jayaram**	621–642
lf-site Strand Transfer by Step-arrest Mutants Yeast Site-specific Recombinase Flp	**M.-C. Serre and M. Jayaram**	643–649
A Gene of Broad Host Range Plasmid RK2 codes a Novel DNA-binding Protein	**G. Jagura-Burdzy and C. M. Thomas**	651–660
High Degree of Macronuclear Chromosome ymorphism is Generated by Variable DNA arrangements in *Paramecium primaurelia* ing Macronuclear Differentiation	**F. Caron**	661–678
ding of an Antiviral Agent to a Sensitive and a sistant Human Rhinovirus. Computer ulation Studies with Sampling of Amino Acid e-chain Conformations. I. Mapping the tamers of Residue 188 of Viral Protein 1	**R. C. Wade and J. A. McCammon**	679–696
ding of an Antiviral Agent to a Sensitive and a sistant Human Rhinovirus. Computer ulation Studies with Sampling of Amino Acid e-chain Conformations. II. Calculation of e-energy Differences by Thermodynamic egration	**R. C. Wade and J. A. McCammon**	697–712
dicting Protein Secondary Structure Content. Tandem Neural Network Approach	**S. M. Muskal and S.-H. Kim**	713–727
A Curvature Does Not Require Bifurcated drogen Bonds or Pyrimidine Methyl Groups	**S. Diekmann, J. M. Mazzarelli, L. W. McLaughlin, E. von Kitzing and A. A. Travers**	729–738
ined Crystal Structure of a Recombinant munoglobulin Domain and a nplementarity-determining Region 1-grafted tant	**B. Steipe, A. Plückthun and R. Huber**	739–753
ton Nuclear Magnetic Resonance Assignments Structural Characterization of an ramolecular DNA Triplex	**R. Macaya, E. Wang, P. Schultze, V. Sklenář and J. Feigon**	755–773
stal Structure of Oxidized Flavodoxin from a l Alga *Chrondrus crispus* Refined at 1·8 Å olution. Description of the Flavin nonucleotide Binding Site	**K. Fukuyama, H. Matsubara and L. J. Rogers**	775–789
stal Structure of Yeast Cu,Zn Superoxide mutase. Crystallographic Refinement at 2·5 Å olution	**K. Djinovic, G. Gatti, A. Coda, L. Antolini, G. Pelosi, A. Desideri, M. Falconi, F. Marmocchi, G. Rotilio and M. Bolognesi**	791–809

X-ray Solution Scattering Reveals Conformational Changes upon Iron Uptake in Lactoferrin, Serum and Ovo-transferrins — **J. G. Grossmann, M. Neu, E. Pantos, F. J. Schwab, R. W. Evans, E. Townes-Andrews, P. F. Lindley, H. Appel, W.-G. Thies and S. S. Hasnain** — 811–8

Solution Structure of the Fibrin Binding Finger Domain of Tissue-type Plasminogen Activator Determined by ^{1}H Nuclear Magnetic Resonance — **A. K. Downing, P. C. Driscoll, T. S. Harvey, T. J. Dudgeon, B. O. Smith, M. Baron and I. D. Campbell** — 821–8

Energetics of the Strand Separation Transition in Superhelical DNA — **C. J. Benham** — 835–8

Docking by Least-squares Fitting of Molecular Surface Patterns — **D. J. Bacon and J. Moult** — 849–8

Three-dimensional Structure for the β_2 Adrenergic Receptor Protein Based on Computer Modeling Studies — **K. MaloneyHuss and T. P. Lybrand** — 859–8

Identification of a Protein-binding Surface by Differential Amide Hydrogen-exchange Measurements. Application to Bowman-Birk Serine-protease Inhibitor — **M. H. Werner and D. E. Wemmer** — 873–8

Mutation of Asparagine 111 of Rubisco from *Rhodospirillum rubrum* Alters the Carboxylase/Oxygenase Specificity — **P. Chène, A. G. Day and A. R. Fersht** — 891–8

Binding of the Yeast tRNA^{Met} Anticodon by the Cognate Methionyl-tRNA Synthetase Involves at Least Two Independent Peptide Regions — **L. Despons, B. Senger, F. Fasiolo and P. Walter** — 897–9

Crystallization Notes

Crystallization and Preliminary Diffraction Studies of Hydroxypyruvate Reductase (D-Glycerate Dehydrogenase) from *Hyphomicrobium methylovorum* — **J. D. Goldberg, P. Brick, T. Yoshida, T. Mitsunaga, T. Oshiro, M. Shimao and Y. Izumi** — 909–9

Preliminary Crystallographic Analysis of Murine Macrophage Inflammatory Protein 2 — **E. Lolis, R. M. Sweet, L. S. Cousens, P. Tekamp-Olson, B. A. Sherry and A. Cerami** — 913–9

Sequence Note

Ulysses Transposable Element of *Drosophila* Shows High Structural Similarities to Functional Domains of Retroviruses — **M. B. Evgen'ev, V. G. Corces and D.-H. Lankenau** — 917–9

Author Index — 925–9

Number 4, 20 June 1992

Communications

De novo Design, Synthesis and Study of Albebetin, a Polypeptide with a Predetermined Three-dimensional Structure. Probing the Structure at the Nanogram Level — **A. N. Fedorov, D. A. Dolgikh, V. V. Chemeris, B. K. Chernov, A. V. Finkelstein, A. A. Schulga, Y. B. Alakhov, M. P. Kirpichnikov and O. B. Ptitsyn** — 927–

From Adenylate Cyclase to Guanylate Cyclase. Mutational Analysis of a Change in Substrate Specificity — **A. Beuve and A. Danchin** — 933–

ermodynamic Consequences of the Removal of a sulphide Bridge from Hen Lysozyme — A. Cooper, S. J. Eyles, S. E. Radford and C. M. Dobson — 939–943

-optimization of Ribozyme Substrate Stacking d L-Arginine Binding — M. Yarus and I. Majerfeld — 945–949

rticles

lomere End-replication Problem and Cell Aging — M. Z. Levy, R. C. Allsopp, A. B. Futcher, C. W. Greider and C. B. Harley — 951–960

nomic Organization and Context of a ypanosome Variant Surface Glycoprotein Gene mily — T. P. Beals and J. C. Boothroyd — 961–971

quence Divergence among Members of a ypanosome Variant Surface Glycoprotein Gene mily — T. P. Beals and J. C. Boothroyd — 973–983

omoter Sequence Containing $(CT)_n \cdot (GA)_n$ peats is Critical for the Formation of the Nase I Hypersensitive Sites in the *Drosophila* 26 Gene — Q. Lu, L. L. Wallrath, B. D. Allan, R. L. Glaser, J. T. Lis and S. C. R. Elgin — 985–998

uctural Alterations of Double-stranded DNA in mplex with the Adenovirus DNA-binding otein. Implications for Its Function in DNA plication — M. H. Stuiver, W. G. Bergsma, A. C. Arnberg, H. van Amerongen, R. van Grondelle and P. C. van der Vliet — 999–1011

pological Analysis of the Hepatitis B Virus Core rticle by Cysteine–Cysteine Cross-linking — M. Nassal, A. Rieger and O. Steinau — 1013–1025

rification and Crystallization of Glycogen osphorylase from *Saccharomyces cerevisiae* — V. L. Rath, P. K. Hwang and R. J. Fletterick — 1027–1034

omatic–Aromatic Interactions in the Zinc nger Motif. Analysis of the Two-dimensional clear Magnetic Resonance Structure of a tant Domain — A. Jasanoff, M. Kochoyan, E. Fraenkel, J. P. Lee and M. A. Weiss — 1035–1047

brid System for Protein Secondary Structure ediction — X. Zhang, J. P. Mesirov and D. L. Waltz — 1049–1063

ctron Microscopy of Decorated Crystals for the termination of Crystallographic Rotation and anslation Parameters in Large Protein mplexes — A. Bacher, S. Weinkauf, L. Bachmann, K. Ritsert, W. Baumeister, R. Huber and R. Ladenstein — 1065–1073

ution Conformations and Aggregational perties of Synthetic Amyloid β-Peptides of heimer's Disease. Analysis of Circular chroism Spectra — C. J. Barrow, A. Yasuda, P. T. M. Kenny and M. G. Zagorski — 1075–1093

ree-dimensional Structure of a Recombinant riant of Human Pancreatic Secretory Trypsin nibitor (Kazal Type) — H. J. Hecht, M. Szardenings, J. Collins and D. Schomburg — 1095–1103

-operative Binding of the Globular Domain of stone H5 to DNA — P. H. Draves, P. T. Lowary and J. Widom — 1105–1121

ystallization Notes

rstallization and Preliminary X-ray Studies of Liganded Lysine, Arginine, Ornithine-binding otein from *Salmonella typhimurium* — C. Kang, S. Gokcen, G. Ferro-Luzzi Ames — 1123–1125

liminary X-ray Crystallographic Analysis of ercellular Adhesion Molecule-1 — P. R. Kolatkar, M. A. Oliveira, M. G. Rossmann, A. H. Robbins, S. K. Katti, H. Hoover-Litty, C. Forte, J. M. Greve, A. McClelland and N. H. Olson — 1127–1130

Crystallization and Preliminary X-ray Studies on the Co-repressor Binding Domain of the *Escherichia coli* Purine Repressor — **M. A. Schumacher, K. Y. Choi, H. Zalkin and R. G. Brennan** — 1131–11

Crystallization and Preliminary Crystallographic Study of Neuraminidase from *Micromonospora viridifaciens* — **G. Taylor, L. Dineley, M. Głowka and G. Laver** — 1135–11

Initiating a Crystallographic Study of a Class II Fructose-1,6-bisphosphate Aldolase — **J. H. Naismith, J. D. Ferrara, S. Bailey, K. Marshall, Z. Dauter, K. S. Wilson, J. Habash, S. J. Harrop, A. J. Berry and W. N. Hunter** — 1137–11

Sequence Note

Analysis of the Chicken Fast Myosin Heavy Chain Family. Localization of Isoform-specific Antibody Epitopes and Regions of Divergence — **L. A. Moore, M. J. Arrizubieta, W. E. Tidyman, L. A. Herman and E. Bandman** — 1143–11

Author Index — 1153–1

List of Contents Volume 226

Number 1, 5 July 1992

Communications

Preferential Interaction of Human Immunodeficiency Virus Reverse Transcriptase with Two Regions of Primer $tRNA^{Lys}$ as Evidenced by Footprinting Studies and Inhibition with Synthetic Oligoribonucleotides — **L. Sarih-Cottin, B. Bordier, K. Musier-Forsyth, M.-L. Andreola, P. J. Barr and S. Litvak**

Molecular Interactions in Myosin Assembly: Role of the 28-Residue Charge Repeat in the Rod — **S. J. Atkinson and M. Stewart** — 7

Atomic Interactions in Protein–Carbohydrate Complexes. Tryptophan Residues in the Periplasmic Maltodextrin Receptor for Active Transport and Chemotaxis — **J. C. Spurlino, L. E. Rodseth and F. A. Quiocho** — 15

A 9 Å Two-dimensional Projected Structure of Cholera Toxin B-subunit–G_{M1} Complexes Determined by Electron Crystallography — **G. Mosser, V. Mallouh and A. Brisson** — 23

Contribution of the Hydrophobic Effect to Globular Protein Stability — **C. N. Pace** — 29

Asp537, Asp812 are Essential and Lys631, His811 are Catalytically Significant in Bacteriophage T7 RNA Polymerase Activity — **P. A. Osumi-Davis, M. C. de Aguilera, R. W. Woody and A.-Y. Moon Woody** — 37

Articles

Formation of Open and Elongating Transcription Complexes by RNA Polymerase III — **G. A. Kassavetis, J. A. Blanco, T. E. Johnson and E. P. Geiduschek** — 47

How Lac Repressor Finds *lac* Operator *in Vitro* — **R. Fickert and B. Müller-Hill** — 59

Isorepressor of the *gal* Regulon in *Escherichia coli* — **M. J. Weickert and S. Adhya** — 69

Mutagenesis of the *Bacillus subtilis* "−12,−24" Promoter of the Levanase Operon and Evidence for the Existence of an Upstream Activating Sequence — **I. Martin-Verstraete, M. Débarbouillé, A. Klier and G. Rapoport** — 85

Aminolevulinate Couples *cycA* Transcription To anges in Heme Availability in *Rhodobacter haeroides*	**B. A. Schilke and T. J. Donohue**	101–115
combination Between Adenovirus Type 12 DNA d a Hamster Preinsertion Sequence in a Cell-free stem. Patch Homologies and Fractionation of iclear Extracts	**J. Tatzelt, B. Scholz, K. Fechteler, R. Jessberger and W. Doerfler**	117–126
iwinding of Heterologous DNA by RecA Protein ring the Search for Homologous Sequences	**E. Rould, K. Muniyappa and C. M. Radding**	127–139
ediction of Gene Structure	**R. Guigó, S. Knudsen, N. Drake and T. Smith**	141–157
olecular and Genomic Organization of Clusters of petitive DNA Sequences in *Caenorhabditis gans*	**G. Naclerio, G. Cangiano, A. Coulson, A. Levitt, V. Ruvolo and A. La Volpe**	159–168
w Resolution Structure of Microtubules in lution. Synchrotron X-ray Scattering and ectron Microscopy of Taxol-induced crotubules Assembled from Purified Tubulin in mparison with Glycerol and MAP-induced crotubules	**J. M. Andreu, J. Bordas, J. F. Diaz, J. García de Ancos, R. Gil, F. J. Medrano, E. Nogales, E. Pantos and E. Towns-Andrews**	169–184
-ray Crystal Structure of Canine yeloperoxidase at 3 Å Resolution	**J. Zeng and R. E. Fenna**	185–207
ystal Structure of the Factor for Inversion imulation FIS, at 2·0 Å Resolution	**D. Kostrewa, J. Granzin, D. Stock, H.-W. Choe, J. Labahn and W. Saenger**	209–226
ystal Structure Solution and Refinement of the misynthetic Cobalt-substituted Bovine ythrocyte Superoxide Dismutase at 2·0 Å esolution	**K. Djinovic, A. Coda, L. Antolini, G. Pelosi, A. Desideri, M. Falconi, G. Rotilio and M. Bolognesi**	227–238
500 ps Molecular Dynamics Simulation Study of terleukin-1β in Water. Correlation with Nuclear agnetic Resonance Spectroscopy and ystallography	**I. Chandrasekhar, G. M. Clore, A. Szabo, A. M. Gronenborn and B. R. Brooks**	239–250
wards an Understanding of the Arginine–partate Interaction	**J. B. O. Mitchell, J. M. Thornton, J. Singh and S. L. Price**	251–262
odulation of Thrombin–Hirudin Interaction by ecific Ion Effects	**R. De Cristofaro, J. W. Fenton II and E. Di Cera**	263–269
ystallization Notes		
ystallization and Preliminary X-ray Study of nor Glucoamylase from *Aspergillus awamori* riant X-100/D27	**A. M. Golubev, K. N. Neustroev, A. E. Aleshin and L. M. Firsov**	271–272
ystallization, Activity Assay and Preliminary -ray Diffraction Analysis of the Uncleaved Form the Serpin Antichymotrypsin	**A. Wei, H. Rubin, B. S. Cooperman, N. Schechter and D. W. Christianson**	273–276
ystallization of Sindbis Virus and its ucleocapsid	**S. C. Harrison, R. K. Strong, S. Schlesinger and M. J. Schlesinger**	277–280
ystallization and Preliminary X-ray ystallographic Analysis of *Mirabilis* Antiviral otein	**M. Miyano, K. Appelt, M. Arita, N. Habuka, J. Kataoka, H. Ago, H. Tsuge, M. Noma, V. Ashford and N-h. Xuong**	281–283

Communications

Binding of Proteins from Embryonic and Differentiated Cells to a Bidirectional Promoter Contained within a CpG Island	**C. Tyndall, F. Watt, P. L. Molloy, P. C. Vincent and M. Frommer**	289–29
Eukaryotic Initiation Factor 3 Does Not Prevent Association Through Physical Blockage of the Ribosomal Subunit–Subunit Interface	**S. Srivastava, A. Verschoor and J. Frank**	301–30
Kinking of RNA Helices by Bulged Bases, and the Structure of the Human Immunodeficiency Virus Transactivator Response Element	**F. A. Riordan, A. Bhattacharyya, S. McAteer and D. M. J. Lilley**	305–31
Formation of the Right before the Left Mature DNA End during Packaging–Cleavage of Bacteriophage T7 DNA Concatemers	**P. Serwer, R. H. Watson and S. J. Hayes**	311–31
Mutational Substitution of Residues Implicated by Crystal Structure in Binding the Substrate Glutathione to Human Glutathione S-transferase π	**T. H. Manoharan, A. M. Gulick, P. Reinemer, H. W. Dirr, R. Huber and W. E. Fahl**	319–32

Articles

Effect of Conformational Features on the Aminoacylation of tRNAs and Consequences on the Permutation of tRNA Specificities	**V. Perret, C. Florentz, J. D. Puglisi and R. Giegé**	323–33
Transcriptional Commitment of Mitochondrial RNA Polymerase from *Saccharomyces cerevisiae*	**T. K. Biswas**	335–34
Sequence-specific DNA Binding by a Two Zinc-finger Peptide from the *Drosophila melanogaster* Tramtrack Protein	**L. Fairall, S. D. Harrison, A. A. Travers and D. Rhodes**	349–36
Arginine Regulon of *Escherichia coli* K-12. A Study of Repressor–Operator Interactions and of *in Vitro* Binding Affinities *versus in Vivo* Repression	**D. Charlier, M. Roovers, F. Van Vliet, A. Boyen, R. Cunin, Y. Nakamura, N. Glansdorff and A. Piérard**	367–38
Binding of the Arginine Repressor of *Escherichia coli* K12 to its Operator Sites	**G. Tian, D. Lim, J. Carey and W. K. Maas**	387–39
Important 2′-hydroxyl Groups in Model Substrates for M1 RNA, the Catalytic RNA Subunit of RNase P from *Escherichia coli*	**J.-P. Perreault and S. Altman**	399–40
Ribosomal RNA Identity Elements for Ricin A-chain Recognition and Catalysis. Analysis with Tetraloop Mutants	**A. Glück, Y. Endo and I. G. Wool**	411–41
Electron Microscopic Study of (A)BC Excinuclease. DNA is Sharply Bent in the UvrB–DNA Complex	**Q. Shi, R. Thresher, A. Sancar and J. Griffith**	425–43
Morphological Pathway of Flagellar Assembly in *Salmonella typhimurium*	**T. Kubori, N. Shimamoto, S. Yamaguchi, K. Namba and S.-I. Aizawa**	433–44
Conformational Switching in the Flagellar Filament of *Salmonella typhimurium*	**S. Trachtenberg and D. J. DeRosier**	447–45
Three-dimensional Structure of a Cloning Vector. X-ray Diffraction Studies of Filamentous Bacteriophage M13 at 7 Å Resolution	**M. J. Glucksman, S. Bhattacharjee and L. Makowski**	455–46
Determination of Eukaryotic Protein Coding Regions Using Neural Networks and Information Theory	**R. Farber, A. Lapedes and K. Sirotkin**	471–47

ystal Structure of a erenil–d(CGCAAATTTGCG) Complex. An xample of Drug–DNA Recognition Based on quence-dependent Structural Features	**D. G. Brown, M. R. Sanderson, E. Garman and S. Neidle**	481–490
otein Interactions with Urea and Guanidinium loride. A Calorimetric Study	**G. I. Makhatadze and P. L. Privalov**	491–505
curate Modeling of Protein Conformation by utomatic Segment Matching	**M. Levitt**	507–533
der–Disorder Phenomena in Myelinated Nerve eaths. IV. The Disordering Effects of High vels of Local Anaesthetics on Rat Sciatic and otic Nerves	**L. Mateu, V. Luzzati, G. M. Villegas, M. Borgo and R. Vargas**	535–545
ppendix. A Comparison of the Novel Approach the Structure of Myelin with Previous eatments of the Same, or Similar, Problems	**V. Luzzati and L. Mateu**	546–548
uclear Magnetic Resonance Detection of Bound ater Molecules in the Active Site of *Lactobacillus sei* Dihydrofolate Reductase in Aqueous Solution	**I. P. Gerothanassis, B. Birdsall, C. J. Bauer, T. A. Frenkiel and J. Feeney**	549–554

ystallization Notes

urification and Crystallization of Human thepsin D	**M. Fusek, M. Baudys and P. Metcalf**	555–557
ystallization of κ-Bungarotoxin: Preliminary ray Data Obtained from the Venom-derived otein	**J. C. Sachettini, S. Patel, G. Scapin, J. J. Fiordalisi and G. A. Grant**	559–562
ystallographic Data for the 9000 Dalton Wheat on-specific Phospholipid Transfer Protein	**E. Pebay-Peyroula, C. Cohen-Addad, M. S. Lehmann and D. Marion**	563–564
ystallization of the NAD-dependent Malic uzyme from the Parasitic Nematode *Ascaris um*	**L. L. Clancy, G. S. J. Rao, B. C. Finzel, S. W. Muchmore, D. R. Holland, K. D. Watenpaugh, H. M. Krishnamurthy, R. M. Sweet, P. F. Cook, B. G. Harris and H. M. Einspahr**	565–569

ratum 571

uthor Index 573

mmunication

rminal Disorder: A Common Structural Feature the Axial Proteins of Bacterial Flagellum?	**F. Vonderviszt, R. Ishima, K. Akasaka and S.-I. Aizawa**	575–579

ticles

terdependence of Translation, Transcription and RNA Degradation in the *lacZ* Gene	**O. Yarchuk, N. Jacques, J. Guillerez and M. Dreyfus**	581–596
lture Conditions Differentially Affect the anslation of Individual *Escherichia coli* mRNAs	**N. Jacques, J. Guillerez and M. Dreyfus**	597–608
anslation Inhibition by an mRNA Coding gion Secondary Structure is Determined by Its oximity to the AUG Initiation Codon	**S. A. Liebhaber, F. Cash and S. S. Eshleman**	609–621

Positive Regulation of the Expression of the *Escherichia coli pts* Operon. Identification of the Regulatory Regions	**H. De Reuse, A. Kolb and A. Danchin**	623–63
Mechanism of Killer Gene Activation. Antisense RNA-dependent RNase III Cleavage Ensures Rapid Turn-over of the Stable Hok, SrnB and PndA Effector Messenger RNAs	**K. Gerdes, A. Nielsen, P. Thorsted and E. G. H. Wagner**	637–64
Functional Structures of the RecA Protein Found by Chimera Analysis	**T. Ogawa, A. Shinohara, H. Ogawa and J.-i. Tomizawa**	651–6
Cre-*lox* Recombination in *Escherichia coli* Cells. Mechanistic Differences from the *in Vitro* Reaction	**D. E. Adams, J. B. Bliska and N. R. Cozzarelli**	661–6
Stability of Coliphage λ DNA Replication Initiator, the λO Protein	**G. Węgrzyn, A. Pawłowicz and K. Taylor**	675–6
Inheritance of the Replication Complex by One of Two Daughter Copies During λ Plasmid Replication in *Escherichia coli*	**G. Węgrzyn and K. Taylor**	681–6
Alu RNA Transcripts in Human Embryonal Carcinoma Cells. Model of Post-transcriptional Selection of Master Sequences	**D. Sinnett, C. Richer, J.-M. Deragon and D. Labuda**	689–7
Activation of RecA Protein. The Open Helix Model for LexA Cleavage	**E. DiCapua, M. Cuillel, E. Hewat, M. Schnarr, P. A. Timmins and R. W. H. Ruigrok**	707–7
Association of AUUUA-binding Protein with A+U-rich mRNA during Nucleo-cytoplasmic Transport	**W. E. G. Müller, H. Slor, K. Pfeifer, P. Hühn, A. Bek, S. Orsulic, H. Ushijima and H. C. Schröder**	721–7
Cell Killing by the F Plasmid CcdB Protein Involves Poisoning of DNA–Topoisomerase II Complexes	**P. Bernard and M. Couturier**	735–7
The Rhombotin Gene Family Encode Related LIM-domain Proteins whose Differing Expression Suggests Multiple Roles in Mouse Development	**L. Foroni, T. Boehm, L. White, A. Forster, P. Sherrington, X. B. Liao, C. I. Brannan, N. A. Jenkins, N. G. Copeland and T. H. Rabbitts**	747–7
Quantitation of Molecular Densities by Cryo-electron Microscopy. Determination of the Radial Density Distribution of Tobacco Mosaic Virus	**M. F. Smith and J. P. Langmore**	763–7
Conformational Sub-states in *B*-DNA	**M. Poncin, B. Hartmann and R. Lavery**	775–7
Folding of Peptide Fragments Comprising the Complete Sequence of Proteins. Models for Initiation of Protein Folding. I. Myohemerythrin	**H. J. Dyson, G. Merutka, J. P. Waltho, R. A. Lerner and P. E. Wright**	795–8
Folding of Peptide Fragments Comprising the Complete Sequence of Proteins. Models for Initiation of Protein Folding. II. Plastocyanin	**H. J. Dyson, J. R. Sayre, G. Merutka, H.-C. Shin, R. A. Lerner and P. E. Wright**	819–8
Modeling of the Structure of Bacteriorhodopsin. A Molecular Dynamics Study	**F. Jähnig and O. Edholm**	837–8
High Resolution Functional Analysis of Antibody–Antigen Interactions	**L. Jin, B. M. Fendly and J. A. Wells**	851–8
Crystal Structure of *Escherichia coli* Malate Dehydrogenase. A Complex of the Apoenzyme and Citrate at 1·87 Å Resolution	**M. D. Hall, D. G. Levitt and L. J. Banaszak**	867–8
Structure–Function Relationships in the Low-affinity Mutant Haemoglobin Aalborg (Gly74 (E18)$\beta \rightarrow$ Arg)	**G. Fermi, M. F. Perutz, D. Williamson, P. Stein and D. T.-b. Shih**	883–8

ection of Phage Antibodies by Binding Affinity. micking Affinity Maturation — R. E. Hawkins, S. J. Russell and G. Winter — 889–896

ystallization Notes

ystallization of Recombinant Chitinase from the ned *chi*A Gene of *Serratia marcescens* — C. E. Vorgias, A. J. Kingswell, Z. Dauter and A. B. Oppenheim — 897–898

ystallization of the Complex of Actin with lsolin Segment 1 — H. G. Mannherz, J. Gooch, M. Way, A. G. Weeds and P. J. McLaughlin — 899–901

quence Note

quence of Lamprey Vitellogenin. Implications the Lipovitellin Crystal Structure — W. J. Sharrock, T. A. Rosenwasser, J. Gould, J. Knott, D. Hussey, J. I. Gordon and L. Banaszak — 903–907

rata — 909–910

thor Index — 911–912

Number 4, 20 August 1992

mmunications

quence of a Second Human KDEL Receptor — M. J. Lewis and H. R. B. Pelham — 913–916

fined 2·5 Å Structure of Murine Adenosine aminase at pH 6·0 — A. J. Sharff, D. K. Wilson, Z. Chang and F. A. Quiocho — 917–921

otein–Ligand Energetics Assessed Using Deoxy l Fluorodeoxy Sugars in Equilibrium Binding l High Resolution Crystallographic Studies — P. S. Vermersch, J. J. G. Tesmer and F. A. Quiocho — 923–929

nctional Analysis of the Intramolecular aperone. Mutational Hot Spots in the Subtilisin o-peptide and a Second-site Suppressor tation within the Subtilisin Molecule — T. Kobayashi and M. Inouye — 931–933

ticles

n-competitive Inhibition of Group I Intron NA Self-splicing by Aminoglycoside Antibiotics — U. von Ahsen, J. Davies and R. Schroeder — 935–941

NA Processing Modulates the Expression of the *DABC* Operon in *Pseudomonas aeruginosa* — M. Gamper, B. Ganter, M. R. Polito and D. Haas — 943–957

l-cycle Control of a Cloned Chromosomal Origin Replication from *Caulobacter crescentus* — G. T. Marczynski and L. Shapiro — 959–977

vel *Escherichia coli* Mutant, *dnaR*, ermosensitive in Initiation of Chromosome plication — Y. Sakakibara — 979–987

aR Function of the *prs* Gene of *Escherichia coli* Initiation of Chromosome Replication — Y. Sakakibara — 989–996

tations Affecting RNA–DNA Hybrid rmation of the ColE1 Replication Primer RNA. storation of RNA I Sensitivity to a py-number Mutant by Second-site Mutations — T. Fitzwater, Y.-L. Yang, X.-Y. Zhang and B. Polisky — 997–1008

romatin Structure of *Schizosaccharomyces pombe*. Nucleosome Repeat Length that is Shorter than Chromatosomal DNA Length — J. S. Godde and J. Widom — 1009–1025

Effect of Sequence Mutations on the Higher Order Structure of the Yeast 5 S rRNA	**D. I. Van Ryk and R. N. Nazar**	1027–10
Sporulation Regulatory Protein GerE from *Bacillus subtilis* Binds to and Can Activate or Repress Transcription from Promoters for Mother-cell-specific Genes	**L. Zheng, R. Halberg, S. Roels, H. Ichikawa, L. Kroos and R. Losick**	1037–10
Sequences of 20 Subunits of NADH : Ubiquinone Oxidoreductase from Bovine Heart Mitochondria. Application of a Novel Strategy for Sequencing Proteins Using the Polymerase Chain Reaction	**J. E. Walker, J. M. Arizmendi, A. Dupuis, I. M. Fearnley, M. Finel, S. M. Medd, S. J. Pilkington, M. J. Runswick and J. M. Skehel**	1051–10
New Triple-helical Model for the Shaft of the Adenovirus Fibre	**P. F. W. Stouten, C. Sander, R. W. H. Ruigrok and S. Cusack**	1073–10
Refined 2·3 Å X-ray Crystal Structure of Bovine Thrombin Complexes Formed with the Benzamidine and Arginine-based Thrombin Inhibitors NAPAP, 4-TAPAP and MQPA. A Starting Point for Improving Antithrombotics	**H. Brandstetter, D. Turk, H. W. Hoeffken, D. Grosse, J. Stürzebecher, P. D. Martin, B. F. P. Edwards and W. Bode**	1085–10
Structure of an Isolated Gramicidin A Double Helical Species by High-resolution Nuclear Magnetic Resonance	**S. M. Pascal and T. A. Cross**	1101–11
Crystal Structure Analysis, Refinement and Enzymatic Reaction Mechanism of *N*-Carbamoylsarcosine Amidohydrolase from *Arthrobacter sp.* at 2·0 Å Resolution	**M. J. Romão, D. Turk, F.-X. Gomis-Rüth, R. Huber, G. Schumacher, H. Möllering and L. Rüssmann**	1111–11
Three-dimensional Structure in Solution of Acyl-coenzyme A Binding Protein from Bovine Liver	**K. V. Andersen and F. M. Poulsen**	1131–11
Hydrogen Bonding in Globular Proteins	**D. F. Stickle, L. G. Presta, K. A. Dill and G. D. Rose**	1143–11
Molecular Structure of the *B*-DNA Dodecamer d(CGCAAATTTGCG)$_2$. An Examination of Propeller Twist and Minor-groove Water Structure at 2·2 Å Resolution	**K. J. Edwards, D. G. Brown, N. Spink, J. V. Skelly and S. Neidle**	1161–11
Structure of RecA–DNA Complexes Studied by Combination of Linear Dichroism and Small-angle Neutron Scattering Measurements on Flow-oriented Samples	**B. Nordén, C. Elvingson, M. Kubista, B. Sjöberg, H. Ryberg, M. Ryberg, K. Mortensen and M. Takahashi**	1175–11
Structure of DNA–RecA Complexes Studied by Residue Differential Linear Dichroism and Fluorescence Spectroscopy for a Genetically Engineered RecA Protein	**P. Hagmar, B. Nordén, D. Baty, M. Chartier and M. Takahashi**	1193–12
Crystal Structure of Cleaved Equine Leucocyte Elastase Inhibitor Determined at 1·95 Å Resolution	**U. Baumann, W. Bode, R. Huber, J. Travis and J. Potempa**	1207–12
Thermal Motions of Surface α-Helices in the D-Galactose Chemosensory Receptor. Detection by Disulfide Trapping	**C. L. Careaga and J. J. Falke**	1219–12
X-ray Structure of the DNase I–d(GGTATACC)$_2$ Complex at 2·3 Å Resolution	**S. A. Weston, A. Lahm and D. Suck**	1237–12
Contacts between Tet Repressor and *tet* Operator Revealed by New Recognition Specificities of Single Amino Acid Replacement Mutants	**R. Baumeister, V. Helbl and W. Hillen**	1257–12
A Neutron Solution Scattering Study of the Structure of Annexin-V and its Binding to Lipid Vesicles	**C. Ravanat, J. Torbet and J.-M. Freyssinet**	1271–12

ystallization Notes

/stallization and Preliminary Crystallographic aracterization of GTP Cyclohydrolase I from *cherichia coli* — **C. Schmid, R. Ladenstein, H. Luecke, R. Huber and A. Bacher** — 1279–1281

/stallization and Preliminary Crystallographic idies of Glucosamine-6-phosphate Deaminase m *Escherichia coli* K12 — **E. Horjales, M. M. Altamirano, M. L. Calcagno, Z. Dauter, K. Wilson, R. C. Garratt and G. Oliva** — 1283–1286

rification, Crystallization and Preliminary /stallographic Study of Neuraminidase from *brio cholerae* and *Salmonella typhimurium* LT2 — **G. Taylor, E. Vimr, E. Garman and G. Laver** — 1287–1290

/stallization and Preliminary X-ray Diffraction idies of Aspartic Proteinase from *Irpex lacteus* — **H. Kobayashi, K. Kasamo, H. Mizuno, H. Kim, I. Kusakabe and K. Murakami** — 1291–1293

quence Note

mary Structure of the Second Largest Subunit Human RNA Polymerase II (or B) — **J. Acker, M. Wintzerith, M. Vigneron and C. Kédinger** — 1295–1299

thor Index — 1301–1302

List of Contents Volume 227

Number 1, 5 September 1992

mmunications

ucture of Tobraviral Particles: A Model ggested from Sequence Conservation in braviral and Tobamoviral Coat Proteins — **M. G. Goulden, J. W. Davies, K. R. Wood and G. P. Lomonossoff** — 1–8

Nuclear Magnetic Resonance Studies of the eraction of Urea with Hen Lysozyme. Origins he Conformational Change Induced in Hen sozyme by *N*-Acetylglucosamine gosaccharides — **K. J. Lumb and C. M. Dobson** — 9–14

ticles

ect Binding of Small Nuclear bonucleoprotein G to the Sm Site of Small clear RNA. Ultraviolet Light Cross-linking of otein G to the AAU Stretch Within the Sm Site AUUUGUGG) of U1 Small Nuclear bonucleoprotein Reconstituted *in Vitro* — **V. Heinrichs, W. Hackl and R. Lührmann** — 15–28

e *Escherichia coli rpoB60* Mutation Blocks titermination by Coliphage HK022 *Q*-function — **B. L. Atkinson and M. E. Gottesman** — 29–37

TP Hydrolysis and the Displaced Strand are o Factors that Determine the Polarity of cA-promoted DNA Strand Exchange — **B. B. Konforti and R. W. Davis** — 38–53

aracterization of DNA-binding and and-exchange Stimulation Properties of y-RPA, Yeast Single-strand-DNA-binding Protein — **E. Alani, R. Thresher, J. D. Griffith and R. D. Kolodner** — 54–71

ect of Terminal Non-homology on ramolecular Recombination of Linear Plasmid bstrates in *Escherichia coli* — **C. Luisi-DeLuca and R. D. Kolodner** — 72–80

α-Tubulin Gene Family of Maize (*Zea mays* L.). Evidence for Two Ancient α-Tubulin Genes in Plants	**R. Villemur, C. M. Joyce, N. A. Haas, R. H. Goddard, S. D. Kopczak, P. J. Hussey, D. P. Snustad and C. D. Silflow**	81–
Tubulin Gene Expression in Maize (*Zea mays* L.). Change in Isotype Expression along the Developmental Axis of Seedling Root	**C. M. Joyce, R. Villemur, D. P. Snustad and C. D. Silflow**	97–1
G+C-rich Tract in 5′ End of Human Introns	**J. Engelbrecht, S. Knudsen and S. Brunak**	108–1
Structural Organization of the Genes Encoding the Small Nuclear RNAs U1 to U6 of *Tetrahymena thermophila* is Very Similar to that of Plant Small Nuclear RNA Genes	**H. Ørum, H. Nielsen and J. Engberg**	114–1
Refined Crystal Structure of the Influenza Virus N9 Neuraminidase–NC41 Fab Complex	**W. R. Tulip, J. N. Varghese, W. G. Laver, R. G. Webster and P. M. Colman**	122–1
Crystal Structures of two Mutant Neuraminidase–Antibody Complexes with Amino Acid Substitutions in the Interface	**W. R. Tulip, J. N. Varghese, R. G. Webster, W. G. Laver and P. M. Colman**	149–1
Structure Determination and Analysis of Yeast Iso-2-cytochrome *c* and a Composite Mutant Protein	**M. E. P. Murphy, B. T. Nall and G. D. Brayer**	160–1
Refined 1·8 Å Crystal Structure of the λ Repressor–Operator Complex	**L. J. Beamer and C. O. Pabo**	177–1
Domain Closure in Mitochondrial Aspartate Aminotransferase	**C. A. McPhalen, M. G. Vincent, D. Picot, J. N. Jansonius, A. M. Lesk and C. Chothia**	197–2
Three-dimensional Structure of Class π Glutathione S-Transferase from Human Placenta in Complex with S-Hexylglutathione at 2·8 Å Resolution	**P. Reinemer, H. W. Dirr, R. Ladenstein, R. Huber, M. Lo Bello, G. Federici and M. W. Parker**	214–2
Topology Fingerprint Approach to the Inverse Protein Folding Problem	**A. Godzik, A. Kolinski and J. Skolnick**	227–2
Structure of Scorpion Toxin Variant-3 at 1·2 Å Resolution	**B. Zhao, M. Carson, S. E. Ealick and C. E. Bugg**	239–2
Crystal Structure of a Chimeric Fab′ Fragment of an Antibody Binding Tumour Cells	**R. L. Brady, D. L. Edwards, R. E. Hubbard, J.-S. Jiang, G. Lange, S. M. Roberts, R. J. Todd, J. R. Adair, J. S. Emtage, D. J. King and D. C. Low**	253–2
Human Liver Cathepsin D. Purification, Crystallization and Preliminary X-ray Diffraction Analysis of a Lysosomal Enzyme	**S. Gulnik, E. T. Baldwin, N. Tarasova and J. Erickson**	265–2
Human Epidermal Growth Factor. High Resolution Solution Structure and Comparison with Human Transforming Growth Factor α	**U. Hommel, T. S. Harvey, P. C. Driscoll and I. D. Campbell**	271–2
Crystal Structure of Glycinamide Ribonucleotide Transformylase from *Escherichia coli* at 3·0 Å Resolution. A Target Enzyme for Chemotherapy	**P. Chen, U. Schulze-Gahmen, E. A. Stura, J. Inglese, D. L. Johnson, A. Marolewski, S. J. Benkovic and I. A. Wilson**	283–2
Molecular Basis of Co-operativity in Protein Folding. III. Structural Identification of Co-operative Folding Units and Folding Intermediates	**K. P. Murphy, V. Bhakuni, D. Xie and E. Freire**	293–3

-directed Mutagenesis of the GTP-binding nain of β-Tubulin — G. W. Farr and H. Sternlicht — 307–321

ive Site of Trypanothione Reductase. A Target Rational Drug Design — W. N. Hunter, S. Bailey, J. Habash, S. J. Harrop, J. R. Helliwell, T. Aboagye-Kwarteng, K. Smith and A. H. Fairlamb — 322–333

ıctural Data Suggest that the Active and ctive Forms of the RecA Filament are not ply Interconvertible — X. Yu and E. H. Egelman — 334–346

stallization Notes

stallization and Crystallographic racterization of the Iron–Sulfur-containing A-repair Enzyme Endonuclease III from *herichia coli* — C.-F. Kuo, D. E. McRee, R. P. Cunningham and J. A. Tainer — 347–351

stallization of a Type I 3-Dehydroquinase from *monella typhi* — C. W. G. Boys, S. M. Bury, L. Sawyer, J. D. Moore, I. G. Charles, A. R. Hawkins, R. Deka, C. Kleanthous and J. R. Coggins — 352–355

liminary X-ray Crystallographic Studies on ohol Dehydrogenase from *Drosophila* — E. J. Gordon, S. M. Bury, L. Sawyer, S. Atrian and R. Gonzalez-Duarte — 356–358

thor Index — 359

Number 2, 20 September 1992

mmunications

Ribonucleoprotein Assembly *in Vitro*. ntification of RNA–Protein and tein–Protein Interactions — R. L. Slobbe, W. Pluk, W. J. van Venrooij and G. J. M. Pruijn — 361–366

dularity of the Slit Protein. Characterization of onserved Carboxy-terminal Sequence in reted Proteins and a Motif Implicated in racellular Protein Interactions — J. M. Rothberg and S. Artavanis-Tsakonas — 367–370

dicting Protein Secondary Structure with a ırest-neighbor Algorithm — S. Salzberg and S. Cost — 371–374

racterization of "Native" Apomyoglobin by ecular Dynamics Simulation — C. L. Brooks, III — 375–380

passing Immunization. Human Antibodies n Synthetic Repertoires of Germline V_H Gene ments Rearranged *in Vitro* — H. R. Hoogenboom and G. Winter — 381–388

diction of the Activity and Stability Effects of -directed Mutagenesis on a Protein Core — W. F. van Gunsteren and A. E. Mark — 389–395

icles

MP–CRP Activator Complex and the CytR pressor Protein Bind Co-operatively to the *RP* Promoter in *Escherichia coli* and CytR tagonizes the cAMP–CRP-induced DNA bend — H. Pedersen, L. Søgaard-Andersen, B. Holst, P. Gerlach, E. Bremer and P. Valentin-Hansen — 396–406

Structure of the TFIIIA–5 S DNA Complex	**J. J. Hayes and T. D. Tullius**	407–
Ribose and Glucose–Galactose Receptors. Competitors in Bacterial Chemotaxis	**S. L. Mowbray**	418–
Structure of Tropomyosin at 9 Ångstroms Resolution	**F. G. Whitby, H. Kent, F. Stewart, M. Stewart, X. Xie, V. Hatch, C. Cohen and G. N. Phillips, Jr**	441–
Interchangeability of Related Proteins and Autonomy of Function. The Morphogenetic Proteins of Filamentous Phage f1 and IKe Cannot Replace One Another	**M. Russel**	453–
Mutational Analysis of the "Slippery-sequence" Component of a Coronavirus Ribosomal Frameshifting Signal	**I. Brierley, A. J. Jenner and S. C. Inglis**	463–
X-ray Diffraction Study of Di and Tetra-ligated T-state Hemoglobin from High Salt Crystals	**D. J. Abraham, R. A. Peascoe, R. S. Randad and J. Panikker**	480–
Structure of Porin Refined at 1·8 Å Resolution	**M. S. Weiss and G. E. Schulz**	493–
Solution Structure of a DNA Octamer Containing the Pribnow Box *via* Restrained Molecular Dynamics Simulation with Distance and Torsion Angle Constraints Derived from Two-dimensional Nuclear Magnetic Resonance Spectral Fitting	**U. Schmitz, I. Sethson, W. M. Egan and T. L. James**	510–
Loop Mutations Can Cause a Substantial Conformational Change in the Carboxy Terminus of the Ferritin Protein	**R. Jappelli, A. Luzzago, P. Tataseo, I. Pernice and G. Cesareni**	532–
α-Helix Stability in Proteins. I. Empirical Correlations Concerning Substitution of Side-chains at the N and C-caps and the Replacement of Alanine by Glycine or Serine at Solvent-exposed Surfaces	**L. Serrano, J. Sancho, M. Hirshberg and A. R. Fersht**	544–
α-Helix Stability in Proteins. II. Factors that Influence Stability at an Internal Position	**A. Horovitz, J. M. Matthews and A. R. Fersht**	560–

Crystallization Notes

Crystallization and Preliminary Crystallographic Data of a *Streptomyces scabies* Extracellular Esterase	**R. Green, J. L. Schottel, L. Swenson, Y. Wei and Z. S. Derewenda**	569–
Expression, Purification and Crystallization of the *Vibrio harveyi* Acyltransferase	**L. Swenson, S. R. Ferri, R. Green, A. M. Sharp, E. A. Meighen and Z. S. Derewenda**	572–
Preliminary Crystallographic Analyses of the N-Terminal Lobe of Recombinant Human Serum Transferrin	**Y. Wang, J. Chen, Y. Luo, W. D. Funk, A. B. Mason, R. C. Woodworth, R. T. A. MacGillivray and G. D. Brayer**	575–
Crystallization of Human β-Hexosaminidase B	**W. B. Church, L. Swenson, M. N. G. James and D. Mahuran**	577–
Crystallization and Preliminary X-ray Crystallographic Studies of Rusticyanin from *Thiobacillus ferrooxidans*	**A. Djebli, P. Proctor, R. C. Blake, II and M. Shoham**	581–
Crystallization and Preliminary X-ray Analysis of the Methane Monooxygenase Hydroxylase Protein from *Methylococcus capsulatus* (Bath)	**A. C. Rosenzweig, C. A. Frederick and S. J. Lippard**	583–

quence Notes

ree Different but Related Gene Clusters coding Gas Vesicles in Halophilic Archaea — C. Englert, K. Krüger, S. Offner and F. Pfeifer — 586–592

currence of an Actin-inserting Domain in Tensin — C. Weigt, A. Gaertner, A. Wegner, H. Korte and H. E. Meyer — 593–595

thor Index

Number 3, 5 October 1992

mmunication

Mutation in the Specificity Polypeptide of the pe I Restriction Endonuclease R·*Eco*K That ects Subunit Assembly — V. Zinkevich, P. Heslop, S. W. Glover, M. Weiserova, J. Hubácek and K. Firman — 597–601

icles

le of Integration Host Factor in Stimulating nscription from the σ^{54}-dependent *nifH* moter — E. Santero, T. R. Hoover, A. K. North, D. K. Berger, S. C. Porter and S. Kustu — 602–620

mains of the *Escherichia coli* Threonyl-tRNA thetase Translational Operator and their ation to Threonine tRNA Isoacceptors — C. Brunel, J. Caillet, P. Lesage, M. Graffe, J. Dondon, H. Moine, P. Romby, C. Ehresmann, B. Ehresmann, M. Grunberg-Manago and M. Springer — 621–634

nited Proteolysis Unmasks Specific A-binding of the Murine RNA Polymerase ecific Transcription Termination Factor TTFI — A. Smid, M. Finsterer and I. Grummt — 635–647

inition and Polarity of Action of DNA lication Terminators in *Bacillus subtilis* — M. T. Smith and R. G. Wake — 648–657

ecular Cloning and Analysis of the Gene coding the NADH Oxidase from *Streptococcus alis* 10C1. Comparison with NADH Peroxidase the Flavoprotein Disulfide Reductases — R. P. Ross and A. Claiborne — 658–671

Ring, S Ring and Proximal Rod of the Flagellar al Body of *Salmonella typhimurium* are nposed of Subunits of a Single Protein, FliF — T. Ueno, K. Oosawa and S.-I. Aizawa — 672–677

ect Crossbridges, Relaxed by Spin-labeled eleotide, Show Well-ordered 90° State by X-ray raction and Electron Microscopy, but Spectra Electron Paramagnetic Resonance Probes ort Disorder — M. K. Reedy, C. Lucaveche, N. Naber and R. Cooke — 678–697

ucture of Striated Microtubule-associated Fibers Flagellar Roots. Comparison of Native and onstituted States — H. Patel, K.-F. Lechtreck, M. Melkonian and E. Mandelkow — 698–710

plified Methods for Construction, Assessment Rapid Screening of Peptide Libraries in teriophage — R. B. Christian, R. N. Zuckermann, J. M. Kerr, L. P. Wang and B. A. Malcolm — 711–718

uctural Requirements for Viroid Processing by ase T1 — G. Steger, T. Baumstark, M. Mörchen, M. Tabler, M. Tsagris, H. L. Sänger and D. Riesner — 719–737

Crystal and Molecular Structure of the *A*-DNA Dodecamer d(CCGTACGTACGG). Choice of Fragment Helical Axis	**C. A. Bingman, G. Zon and M. Sundaralingam**	738–7
Determination of a High-quality Nuclear Magnetic Resonance Solution Structure of the Bovine Pancreatic Trypsin Inhibitor and Comparison with Three Crystal Structures	**K. D. Berndt, P. Güntert, L. P. M. Orbons and K. Wüthrich**	757–7
Repertoire of Human Germline V_H Sequences Reveals about Fifty Groups of V_H Segments with Different Hypervariable Loops	**I. M. Tomlinson, G. Walter, J. D. Marks, M. B. Llewelyn and G. Winter**	776–7
Structural Repertoire of the Human V_H Segments	**C. Chothia, A. M. Lesk, E. Gherardi, I. M. Tomlinson, G. Walter, J. D. Marks, M. B. Llewelyn and G. Winter**	799–8
The Crystal and Molecular Structure of the *Rhizomucor miehei* Triacylglyceride Lipase at 1·9 Å Resolution	**Z. S. Derewenda, U. Derewenda and G. G. Dodson**	818–8
X-ray Structure Determination of Telokin, the C-Terminal Domain of Myosin Light Chain Kinase, at 2·8 Å Resolution	**H. M. Holden, M. Ito, D. J. Hartshorne and I. Rayment**	840–8
The Fine Structure of Two DNA Dodecamers Containing the cAMP Responsive Element Sequence and Its Inverse. Nuclear Magnetic Resonance and Molecular Simulation Studies	**O. Mauffret, B. Hartmann, O. Convert, R. Lavery and S. Fermandjian**	852–8
Contact Potential that Recognizes the Correct Folding of Globular Proteins	**V. N. Maiorov and G. M. Crippen**	876–8
Analysis of the Heat Capacity Dependence of Protein Folding	**A.-S. Yang, K. A. Sharp and B. Honig**	889–9
Prediction of Protein Folding Pathways	**G. Chelvanayagam, Z. Reich, R. Bringas and P. Argos**	901–9
Structure of a Hinge-bending T4 Lysozyme Mutant, Ile3→Pro	**M. M. Dixon, H. Nicholson, L. Shewchuck, W. A. Baase and B. W. Matthews**	917–9
Crystallization Notes		
Preliminary Crystallographic Studies of Urease from Jack Bean and from *Klebsiella aerogenes*	**E. Jabri, M. H. Lee, R. P. Hausinger and P. A. Karplus**	934–9
Crystallization and Preliminary X-ray Diffraction Study of *Lathyrus ochrus* Isolectin II Complexed to the Human Lactotransferrin N2 Fragment	**Y. Bourne, M.-P. Nèsa, P. Rougé, J. Mazurier, D. Legrand, G. Spik, J. Montreuil and C. Cambillau**	938–9
Crystallization and Preliminary X-ray Study of the Cathepsin B Complexed with CA074, a Selective Inhibitor	**A. Yamamoto, T. Kaji, K. Tomoo, T. Ishida, M. Inoue, M. Murata and K. Kitamura**	942–9
Crystallization and X-ray Examination of Bovine Adrenodoxin	**A. Marg, R.-J. Kuban, J. Behlke, R. Dettmer and K. Ruckpaul**	945–9
Sequence Notes		
Amino Acid Sequence of Yeast Hemoglobin. A Two-domain Structure	**H. Iwaasa, T. Takagi and K. Shikama**	948–9
Tunicate Muscle Actin Genes. Structure and Organization as a Gene Cluster	**T. Kusakabe, K. W. Makabe and N. Satoh**	955–9
Large ATP Synthase Operon of the Red Alga *Antithamnion* sp. Resembles the Corresponding Operon in Cyanobacteria	**M. Kostrzewa and K. Zetsche**	961–9

ne Structure of Human CD59 and emonstration that Discrete mRNAs are enerated by Alternative Polyadenylation — M. Tone, L. A. Walsh and H. Waldmann — 971–976

rata — 977–978

uthor Index — 979–980

Number 4, 20 October 1992

ommunications

utagenicity of a Unique Apurinic/Apyrimidimic e in Mammalian Cells — A. Gentil, J. B. Cabral-Neto, R. Mariage-Samson, A. Margot, J. L. Imbach, B. Rayner and A. Sarasin — 981–984

imulation of the Phage λ pL Promoter by tegration Host Factor Requires the Carboxy rminus of the α-Subunit of RNA Polymerase — H. Giladi, K. Igarashi, A. Ishihama and A. B. Oppenheim — 985–990

mino Acid Preferences of Small Proteins. plications for Protein Stability and Evolution — S. H. White — 991–995

ticles

sitive and Negative Effects of DNA Bending on tivation of Transcription from a Distant Site — F. Claverie-Martin and B. Magasanik — 996–1008

netic Control of 5 S RNA Gene Transcription — C. W. Seidel and L. J. Peck — 1009–1018

veral Regions of a tRNA Precursor Determine *Escherichia coli* RNase P Cleavage Site — S. G. Svärd and L. A. Kirsebom — 1019–1031

aracterization of Assembly Intermediates of ADH : Ubiquinone Oxidoreductase (Complex I) cumulated in *Neurospora* Mitochondria by Gene sruption — U. Nehls, T. Friedrich, A. Schmiede, T. Ohnishi and H. Weiss — 1032–1042

uctural Basis for the Destabilization of F-Actin Phosphate Release Following ATP Hydrolysis — A. Orlova and E. H. Egelman — 1043–1053

nibition of Bacteriophage λ Development by the *A* Gene of Broad-Host-Range Plasmid RK2 — L. H. Saltman, K.-S. Kim and D. H. Figurski — 1054–1067

enovirus VARNA1 Gene B Block Promoter ment Sequences Required for Transcription and Interaction with Transcription Factors — C. I. Bandea, M.-W. H. Wu and G.-J. Wu — 1068–1085

lecular Genetic Analysis of Bacteriophage P22 ne *3* Product, a Protein Involved in the tiation of Headful DNA Packaging — S. Casjens, L. Sampson, S. Randall, K. Eppler, H. Wu, J. B. Petri and H. Schmieger — 1086–1099

clear Magnetic Resonance Studies of the ernal Dynamics in Apo, $(Cd^{2+})_1$ and $(Ca^{2+})_2$ bindin D_{9k}. The Rates of Amide Proton change with Solvent — N. J. Skelton, J. Kördel, M. Akke and W. J. Chazin — 1100–1117

clear Magnetic Resonance Solution Structure of α-Neurotoxin from the Black Mamba *ndroaspis polylepis polylepis*) — L. R. Brown and K. Wüthrich — 1118–1135

ray Analysis of Substrate Analogs in the Ricin hain Active Site — A. F. Monzingo and J. D. Robertus — 1136–1145

Three-dimensional Solution Structure of an Insulin Dimer. A Study of the B9(Asp) Mutant of Human Insulin Using Nuclear Magnetic Resonance, Distance Geometry and Restrained Molecular Dynamics	**A. M. M. Jørgensen, S. M. Kristensen, J. J. Led and P. Balschmidt**	1146–116
Fluorine-19 Nuclear Magnetic Resonance as a Probe of the Solution Structure of Mutants of 5-Fluorouracil-substituted *Escherichia coli* Valine tRNA	**W.-C. Chu, V. Feiz, W. B. Derrick and J. Horowitz**	1164–117
Correlations Between Fluorine-19 Nuclear Magnetic Resonance Chemical Shift and the Secondary and Tertiary Structure of 5-Fluorouracil-substituted tRNA	**W.-C. Chu, A. Kintanar and J. Horowitz**	1173–118
Domain Structure and Domain–Domain Interactions in the Carboxy-terminal Heparin Binding Region of Fibronectin	**V. Novokhatny, F. Schwarz, D. Atha and K. Ingham**	1182–119
Structure of Native and Apo Carbonic Anhydrase II and Structure of Some of Its Anion–Ligand Complexes	**K. Håkansson, M. Carlsson, L. A. Svensson and A. Liljas**	1192–120
Binding of the Dye Congo Red to the Amyloid Protein Pig Insulin Reveals a Novel Homology amongst Amyloid-forming Peptide Sequences	**W. G. Turnell and J. T. Finch**	1205–12
Conformational and Thermodynamic Properties of Supercoiled DNA	**A. V. Vologodskii, S. D. Levene, K. V. Klenin, M. Frank-Kamenetskii and N. R. Cozzarelli**	1224–12
Stability of a Model β-Sheet in Water	**D. J. Tobias, S. F. Sneddon and C. L. Brooks III**	1244–12

Crystallization Notes

Crystallization and Preliminary X-ray Analysis of the Complex between a Mouse Fab Fragment and a Single IgG-Binding Domain from Streptococcal Protein G	**J. P. Derrick, G. J. Davies, Z. Dauter, K. S. Wilson and D. B. Wigley**	1253–12
Crystallization and Preliminary X-ray Investigation of Bovine Liver Mitochondrial Aldehyde Dehydrogenase	**T. D. Hurley and H. Weiner**	1255–12
Crystallization and Preliminary X-ray Crystallographic Analysis of Lipase from *Pseudomonas cepacia*	**K. K. Kim, K. Y. Hwang, H. S. Jeon, S. Kim, R. M. Sweet, C. H. Yang and S. W. Suh**	1258–12
Purification, Crystallization and Preliminary X-ray Analysis of the 3-Phosphoglycerate Kinase from *Bacillus stearothermophilus*	**G. J. Davies, S. J. Gamblin, J. A. Littlechild and H. C. Watson**	1263–12
Crystallization and Initial Crystallographic Results for Pepstatin A Inhibited Bovine Cathepsin D	**F. Bieber, V. Brachvogel, R. Arni, M. Fusek and P. Metcalf**	1265–1

Sequence Note

Complete Nucleotide Sequence and Structural Organization of Rat Cardiac Troponin T Gene. A Single Gene Generates Embryonic and Adult Isoforms *via* Developmentally Regulated Alternative Splicing	**J.-P. Jin, Q.-Q. Huang, H.-I. Yeh and J. J.-C. Lin**	1269–1

Author Index 1277–1

List of Contents Volume 228

Number 1, 5 November 1992

ɔmmunications

ɔlling-circle Replication of a High-copy BPV-1 asmid	S. Dasgupta, J. Zabielski, M. Simonsson and S. Burnett	1–6
otein Folding within the Cell Is Influenced by ntrolled Rates of Polypeptide Elongation	T. Crombie, J. C. Swaffield and A. J. P. Brown	7–12
e Interdependence of Protein Surface pography and Bound Water Molecules Revealed Surface Accessibility and Fractal Density easures	L. A. Kuhn, M. A. Siani, M. E. Pique, C. L. Fisher, E. D. Getzoff and J. A. Tainer	13–22

ticles

ecific Interactions Between the IclR Repressor the Acetate Operon of *Escherichia coli* and its erator	D. Nègre, J.-C. Cortay, A. Galinier, P. Sauve and A. J. Cozzone	23–29
ɔning and Analysis of the Entire *Escherichia coli s* Gene. *ams* is Identical to *hmp1* and Encodes a 4 kDa Protein that Migrates as a 180 kDa otein	S. Casarégola, A. Jacq, D. Laoudj, G. McGurk, S. Margarson, M. Tempête, V. Norris and I. B. Holland	30–40
aracterization of the Nucleic Acid-binding tivities of the Isolated Amino-terminal Head main of the Intermediate Filament Protein mentin Reveals its Close Relationship to the NA-binding Regions of some Prokaryotic ngle-stranded DNA-binding Proteins	P. Traub, E. Mothes, R. Shoeman, S. Kühn and A. Scherbarth	41–57
netic Analysis of *cosB*, the Binding Site for rminase, the DNA Packaging Enzyme of cteriophage λ	D. Cue and M. Feiss	58–71
netic Analysis of Mutations Affecting rminase, the Bacteriophage λ DNA Packaging zyme, that Suppress Mutations in *cosB*, the rminase Binding Site	D. Cue and M. Feiss	72–87
le of MotA Transcription Factor in cteriophage T4 DNA Replication	K. H. Benson and K. N. Kreuzer	88–100
itational Analysis of the Bacteriophage P1 Late ɔmoter Sequence P_s	H. Lehnherr, A. Guidolin and W. Arber	101–107
ray Structure Determination and Comparison of o Crystal Forms of a Variant (Asn115Arg) of Alkaline Protease from *Bacillus alcalophilus* fined at 1·85 Å Resolution	H. Sobek, H.-J. Hecht, W. Aehle and D. Schomburg	108–117
ution Structure of $[d(GCGTATACGC)]_2$	J.-W. Cheng, S.-H. Chou, M. Salazar and B. R. Reid	118–137
ution Structure of $[d(ATGAGCGAATA)]_2$ jacent G : A Mismatches Stabilized by ɔss-strand Base-stacking and B_{II} Phosphate ɔups	S.-H. Chou, J.-W. Cheng and B. R. Reid	138–155
ɔmonuclear Three-dimensional NOE–NOE clear Magnetic Resonance Spectra for Structure termination of Proteins in Solution	J. Habazettl, M. Schleicher, J. Otlewski and T. A. Holak	156–169
aluation of the Sequence Template Method for ɔtein Structure Prediction. Discrimination of the $\alpha)_8$-Barrel Fold	S. D. Pickett, M. A. S. Saqi and M. J. E. Sternberg	170–187

Three-dimensional Structure of an Fv from a Human IgM Immunoglobulin	**Z.-c. Fan, L. Shan, L. W. Guddat, X.-m. He, W. R. Gray, R. L. Raison and A. B. Edmundson**	188–2
Crystallization, Structure Determination and Least-squares Refinement to 1·75 Å Resolution of the Fatty-acid-binding Protein Isolated from *Manduca sexta* L	**M. M. Benning, A. F. Smith, M. A. Wells and H. M. Holden**	208–2
Anatomy and Evolution of Proteins Displaying the Viral Capsid Jellyroll Topology	**G. Chelvanayagam, J. Heringa and P. Argos**	220–2
Crystal Packing in Six Crystal Forms of Pancreatic Ribonuclease	**M.-P. Crosio, J. Janin and M. Jullien**	243–2
Thermodynamic Stoichiometries of Participation of Water, Cations and Anions in Specific and Non-specific Binding of *lac* Repressor to DNA. Possible Thermodynamic Origins of the "Glutamate Effect" on Protein–DNA Interactions	**J.-H. Ha, M. W. Capp, M. D. Hohenwalter, M. Baskerville and M. T. Record Jr**	252–2
Key Residues in the Allosteric Transition of *Bacillus stearothermophilus* Pyruvate Kinase Identified by Site-directed Mutagenesis	**D. Walker, W. N. Chia and H. Muirhead**	265–2
New Algorithm to Model Protein–Protein Recognition Based on Surface Complementarity. Applications to Antibody–Antigen Docking	**P. H. Walls and M. J. E. Sternberg**	277–2

Crystallization Notes

Crystallization and Preliminary X-ray Investigation of Phosphoribosylaminoimidazole-succinocarboxamide Synthase from the Yeast *Saccharomyces cerevisiae*	**A. I. Grebenko, V. M. Levdikov, V. V. Barynin, W. R. Melik-Adamyan and A. N. Myasnikov**	298–2
Crystallization and Preliminary Crystallographic Analysis of Aspartate-β-semialdehyde Dehydrogenase from *Escherichia coli*	**G. Kryger, G. A. Petsko, J. Ouyang and R. E. Viola**	300–3
Crystallization and Preliminary Crystallographic Investigation of Methanol Dehydrogenase from *Methylobacterium extorquens* AM1	**M. Ghosh, K. Harlos, C. C. F. Blake, I. Richardson and C. Anthony**	302–3
The Expression, Purification and Crystallization of the ε Subunit of the F_1 Portion of the ATPase of *Escherichia coli*	**R. Codd, G. B. Cox, J. M. Guss, R. G. Solomon and D. Webb**	306–3
Crystallization of the A-Domain of the Mannitol Transport Protein Enzyme II^{mtl}	**L. A. Lammers, B. W. Dijkstra, R. P. van Weeghel, H. H. Pas and G. T. Robillard**	310–3

Author Index 3

Number 2, 20 November 1992

Communications

Numerous Group I Introns with Variable Distributions in the Ribosomal DNA of a Lichen Fungus	**P. T. DePriest and M. D. Been**	315–3
An Accurate Method for Determining the Helical Repeat of DNA in Solution Reveals Differences to the Crystal Structures of Two *B*-DNA Decamers	**M. Niederweis, T. Lederer and W. Hillen**	322–3

romatin Reconstitution on Small DNA Rings. DNA Thermal Flexibility of Single icleosomes	**A. Hamiche and A. Prunell**	327–337
olecular Mechanism for Ligand Stabilization in e Mollusc Myoglobin Possessing the Distal Val sidue	**Y. Yamamoto, K. Iwafune, R. Chûjô, Y. Inoue, K. Imai and T. Suzuki**	338–342
Peptide Model for Proline Isomerism in the nfolded State of Staphylococcal Nuclease	**D. P. Raleigh, P. A. Evans, M. Pitkeathly and C. M. Dobson**	343–346
sence of the Thermal Transition in o-α-Lactalbumin in the Molten Globule State. Study by Differential Scanning Microcalorimetry	**K. Yutani, K. Ogasahara and K. Kuwajima**	347–350
lding on the Ribosome of *Escherichia coli* yptophan Synthase β Subunit Nascent Chains obed with a Conformation-dependent noclonal Antibody	**A. N. Fedorov, B. Friguet, L. Djavadi-Ohaniance, Y. B. Alakhov and M. E. Goldberg**	351–358
neral Mutagenesis/Gene Expression Procedure the Construction of Variant Immunoglobulin mains in *Escherichia coli*. Production of the nce-Jones Protein REI_v *via* Fusion to Lactamase	**H. Kolmar, E. Ferrando, F. Hennecke, J. Wippler and H.-J. Fritz**	359–365

ticles

ssenger RNA Secondary Structure and anslational Coupling in the *Escherichia coli* eron Encoding Translation Initiation Factor 3 and the Ribosomal Proteins, L35 and L20	**P. Lesage, C. Chiaruttini, M. Graffe, J. Dondon, M. Milet and M. Springer**	366–386
Factor with Sp1 DNA-binding Specificity mulates *Xenopus* U6 snRNA *in Vivo* anscription by RNA Polymerase III	**A. Lescure, G. Tebb, I. W. Mattaj, A. Krol and P. Carbon**	387–394
Vitro Analysis of Mutant LexA Proteins with Increased Rate of Specific Cleavage	**K. L. Roland, M. H. Smith, J. A. Rupley and J. W. Little**	395–408
rly Stages in RecA Protein-catalyzed Pairing. alysis of Coaggregate Formation and Non-mologous DNA Contacts	**J. M. Pinsince and J. D. Griffith**	409–420
ucture of the Pericentric Long Arm Region of Human Y Chromosome	**K. F. Cooper, R. B. Fisher and C. Tyler-Smith**	421–432
NA Sequence Analysis of 66 kb of the Human HC Class II Region Encoding a Cluster of Genes Antigen Processing	**S. Beck, A. Kelly, E. Radley, F. Khurshid, R. P. Alderton and J. Trowsdale**	433–441
cleosome Core Binding Region of Chromosomal otein HMG-17 Acts as an Independent nctional Domain	**M. P. Crippa, P. J. Alfonso and M. Bustin**	442–449
o tRNA-binding Sites in Addition to A and P es on Eukaryotic Ribosomes	**M. V. Rodnina and W. Wintermeyer**	450–459
ostitutions of Hydrophobic Amino Acids duce the Amyloidogenicity of Alzheimer's ease βA4 Peptides	**C. Hilbich, B. Kisters-Woike, J. Reed, C. L. Masters and K. Beyreuther**	460–473
ucture of the Myosin Filaments of Relaxed and gor Vertebrate Striated Muscle Studied by pid Freezing Electron Microscopy	**R. Craig, L. Alamo and R. Padrón**	474–487
aracterization of Bacteriophage T7 RNA ymerase by Linker Insertion Mutagenesis	**L. Gross, W.-J. Chen and W. T. McAllister**	488–505
ostitution of a Single Bacteriophage T3 Residue Bacteriophage T7 RNA Polymerase at Position Results in a Switch in Promoter Specificity	**C. A. Raskin, G. Diaz, K. Joho and W. T. McAllister**	506–515

Structure of the U2 Strain of Tobacco Mosaic Virus Refined at 3·5 Å Resolution Using X-ray Fiber Diffraction	**R. Pattanayek and G. Stubbs**	516–5
Is the Bacteriophage Lambda Lysozyme an Evolutionary Link or a Hybrid between the C and V-type Lysozymes? Homology Analysis and Detection of the Catalytic Amino Acid Residues	**L. Jespers, E. Sonveaux and J. Fastrez**	529–5
Similarities and Differences between Human Cyclophilin A and Other β-Barrel Structures. Structural Refinement at 1·63 Å Resolution	**H. Ke**	539–5
High Resolution Crystal Structures and Comparisons of T-State Deoxyhaemoglobin and Two Liganded T-State Haemoglobins T(α-osy) Haemoglobin and T(met)Haemoglobin	**R. Liddington, Z. Derewenda, E. Dodson, R. Hubbard and G. Dodson**	551–5
Crystal Structure of the *Bacillus lentus* Alkaline Protease, Subtilisin BL, at 1·4 Å Resolution	**D. W. Goddette, C. Paech, S. S. Yang, J. R. Mielenz, C. Bystroff, M. E. Wilke and R. J. Fletterick**	580–5
Structure of Oxidized Bacteriophage T4 Glutaredoxin (Thioredoxin). Refinement of Native and Mutant Proteins	**H. Eklund, M. Ingelman, B.-O. Söderberg, T. Uhlin, P. Nordlund, M. Nikkola, U. Sonnerstam, T. Joelson and K. Petratos**	596–6
Adjacent Zinc-finger Motifs in Multiple Zinc-finger Peptides from SW15 Form Structurally Independent, Flexibly Linked Domains	**T. Nakaseko, D. Neuhaus, A. Klug and D. Rhodes**	619–6
Solution Structures of Two Zinc-finger Domains from SW15 Obtained Using Two-dimensional ^{1}H Nuclear Magnetic Resonance Spectroscopy. A Zinc-finger Structure with a Third Strand of β-Sheet	**D. Neuhaus, Y. Nakaseko, J. W. R. Schwabe and A. Klug**	637–6
Roles of Structural Domains in the Morphology and Surface Anchoring of the Tetragonal Paracrystalline Array of *Aeromonas hydrophila*. Biochemical Characterization of the Major Structural Domain	**S. Thomas, J. W. Austin, W. D. McCubbin, C. M. Kay and T. J. Trust**	652–6
Structural Consequences of Sequence Patterns in the Fingerprint Region of the Nucleotide Binding Fold. Implications for Nucleotide Specificity	**P. J. Baker, K. L. Britton, D. W. Rice, A. Rob and T. J. Stillman**	662–6
Three-dimensional Structure of the High-potential Iron–Sulfur Protein Isolated from the Purple Phototrophic Bacterium *Rhodocyclus tenuis* Determined and Refined at 1·5 Å Resolution	**I. Rayment, G. Wesenberg, T. E. Meyer, M. A. Cusanovich and H. M. Holden**	672–6
Crystallization Notes		
Preliminary Crystallographic Study of Bluetongue Virus Capsid Protein, VP7	**A. K. Basak, D. I. Stuart and P. Roy**	687–6
Crystallization and Preliminary X-ray Diffraction Studies of a Peroxidase from Barley Grain	**A. Henriksen, J. F. W. Petersen, A. Svensson, J. Hejgaard, K. G. Welinder and M. Gajhede**	690–
Crystallization and Preliminary X-ray Diffraction Analysis of the Catalytic Domain of Cex, an Exo-β-1,4-glucanase and β-1,4-xylanase from the Bacterium *Cellulomonas fimi*	**S. Bedarkar, N. R. Gilkes, D. G. Kilburn, E. Kwan, D. R. Rose, R. C. Miller, Jr, R. A. J. Warren and S. G. Withers**	693–
Crystallization of Recombinant Chitobiase from *Serratia marcescens*	**I. Tews, Z. Dauter, A. B. Oppenheim and C. E. Vorgias**	696–

quence Notes

Myoglobin Evolved from Indoleamine -dioxygenase — **T. Suzuki and T. Takagi** — 698–700

e P-glycoprotein Gene Family of *Caenorhabditis gans*. Cloning and Characterization of Genomic d Complementary DNA Sequences — **C. R. Lincke, I. The, M. van Groenigen and P. Borst** — 701–711

thor Index — 713–714

Number 3, 5 December 1992

mmunications

thematical Characterization of Chaos Game presentation. New Algorithms for Nucleotide quence Analysis — **C. Dutta and J. Das** — 715–719

nstruction of a Microphage Variant of amentous Bacteriophage — **L. Specthrie, E. Bullitt, K. Horiuchi, P. Model, M. Russel and L. Makowski** — 720–724

rrolidine Ring Puckering in *cis* and *trans*-proline sidues in Proteins and Polypeptides. Different ckers are Favoured in Certain Situations — **E. J. Milner-White, L. H. Bell and P. H. Maccallum** — 725–734

lical Structure of P Pili from *Escherichia coli*. idence from X-ray Fiber Diffraction and nning Transmission Electron Microscopy — **M. Gong and L. Makowski** — 735–742

icles

alysis of the Role of Phosphate Oxygens in the oup I Intron from *Tetrahymena* — **E. L. Christian and M. Yarus** — 743–758

ucture of RNA and DNA Chains in Paused nscription Complexes Containing *Escherichia* RNA Polymerase — **D. N. Lee and R. Landick** — 759–777

de of Action of Topoisomerase II-targeting nts at a Specific DNA Sequence. Uncoupling DNA Binding, Cleavage and Religation Events — **B. S. Sørensen, J. Sinding, A. H. Andersen, J. Alsner, P. B. Jensen and O. Westergaard** — 778–786

ferential Binding of Wild-type and a Mutant oA Protein to *oriR* Sequence Suggests a Model the Initiation of Plasmid R1 Replication — **R. Giraldo and R. Díaz** — 787–802

Vitro Evolution of Intrinsically Bent DNA — **B. A. Beutel and L. Gold** — 803–812

tational Spectra in Human B-cells. ntaneous, Oxygen and Hydrogen oxide-induced Mutations at the *hprt* Gene — **A. R. Oller and W. G. Thilly** — 813–826

ucture Analysis of the 5′ External Transcribed cer of the Precursor Ribosomal RNA From *charomyces cerevisiae* — **L.-C. C. Yeh and J. C. Lee** — 827–839

e of the SpoIIID Switch Protein during *illus subtilis* Sporulation Depends on the her-cell Sigma Factor, σ^K — **R. Halberg and L. Kroos** — 840–849

rahymena Gene Encodes a Protein that is nologous with the Liver-specific F-antigen and ociated with Membranes of the Golgi paratus and Transport Vesicles — **R. Hummel, P. Nørgaard, P. H. Andreasen, S. Neve, K. Skjødt, D. Tornehave and K. Kristiansen** — 850–861

Selection of High Affinity RNA Ligands to the Bacteriophage R17 Coat Protein	**D. Schneider, C. Tuerk and L. Gold**	862–8
Conformational Changes of a Viral Capsid Protein. Thermodynamic Rationale for Proteolytic Regulation of Bacteriophage T4 Capsid Expansion, Co-operativity, and Super-stabilization by Soc Binding	**A. C. Steven, H. L. Greenstone, F. P. Booy, L. W. Black and P. D. Ross**	870–8
Terminating a Macromolecular Helix. Structural Model for the Minor Proteins of Bacteriophage M13	**L. Makowski**	885–8
Crystal Structure of a Sweet Tasting Protein Thaumatin I, at 1·65 Å Resolution	**C. M. Ogata, P. F. Gordon, A. M. de Vos and S.-H. Kim**	893–9
Taming Cut-off Induced Artifacts in Molecular Dynamics Studies of Solvated Polypeptides. The Reaction Field Method	**H. Schreiber and O. Steinhauser**	909–9
Analysis of Sequence Variation among Legume Lectins. A Ring of Hypervariable Residues Forms the Perimeter of the Carbohydrate-binding Site	**N. M. Young and R. P. Oomen**	924–9
Isolation, Crystallization, Crystal Structure Analysis and Refinement of B-Phycoerythrin from the Red Alga *Porphyridium sordidum* at 2·2 Å Resolution	**R. Ficner, K. Lobeck, G. Schmidt and R. Huber**	935–9
Recognition of Distantly Related Protein Sequences Using Conserved Motifs and Neural Networks	**D. Frishman and P. Argos**	951–9
Unique Side-chain Conformation Encoding for Chirality and Azimuthal Orientation in the Molecular Packing of Skin Collagen	**E. P. Katz and C. W. David**	963–9

Crystallization Notes

Crystallization and Preliminary X-ray Analysis of a Fungal Endoglucanase I	**G. Davies, S. Tolley, K. Wilson, M. Schülein, H. F. Wöldike and G. Dodson**	970–9
Preliminary Crystallographic Studies of the Amino Terminal Half of Human Lactoferrin in Its Iron-saturated and Iron-free Forms	**C. L. Day, G. E. Norris, B. F. Anderson, J. W. Tweedie and E. N. Baker**	973–9
Crystallization of Murine Major Histocompatibility Complex Class I H-2K^b with Single Peptides	**E. A. Stura, M. Matsumura, D. H. Fremont, Y. Saito, P. A. Peterson and I. A. Wilson**	975–9
Purification, Crystallization and Preliminary X-ray Analysis of Toxic Shock Syndrome Toxin-1 from *Staphylococcus aureus*	**E. F. Passalacqua, R. D. Brehm, K. Ravi Acharya and H. S. Tranter**	983–9
Single Crystals of Bovine Heart Cytochrome *c* Oxidase at Fully Oxidized Resting, Fully Reduced and CO-bound Fully Reduced States Are Isomorphous with Each Other	**K. Shinzawa-Itoh, H. Yamashita, S. Yoshikawa, Y. Fukumoto, T. Abe and T. Tsukihara**	987–9
Crystallization and Preliminary X-ray Diffraction Studies of Pancreatic Spasmolytic Polypeptide	**M. A. Gorman, A. De and P. S. Freemont**	991–9
Crystallization and Preliminary Crystallographic Study of an Octa-heme Cytochrome c_3 from *Desulfovibrio desulfuricans* Norway	**M. Czjzek, F. Guerlesquin, V. Roig, F. Payan, M. Bruschi and R. Haser**	995–9

quence Notes

cleotide Sequence and Organization of an -uptake Gene Cluster from *Rhizobium minosarum* bv. viciae Containing a bredoxin-like Gene and Four Additional Open ading Frames — **L. Rey, E. Hidalgo, J. Palacios and T. Ruiz-Argüeso** — 998–1002

ican Swine Fever Virus Encodes a Gene with tensive Homology to Type II DNA poisomerases — **S. A. Baylis, L. K. Dixon, S. Vydelingum and G. L. Smith** — 1003–1010

yl-CoA-binding Protein/Diazepam-binding ibitor Gene and Pseudogenes. A Typical usekeeping Gene Family — **S. Mandrup, R. Hummel, S. Ravn, G. Jensen, P. H. Andreasen, N. Gregersen, J. Knudsen and K. Kristiansen** — 1011–1022

thor Index — 1023–1024

Number 4, 20 December 1992

mmunications

nptothecin Inhibits Both the Cleavage and igation Reactions of Eukaryotic DNA poisomerase I — **E. Kjeldsen, J. Q. Svejstrup, I. I. Gromova, J. Alsner and O. Westergaard** — 1025–1030

dulation of Ultraviolet Light Mutational spots by Cellular Stress — **S. Seetharam and M. M. Seidman** — 1031–1036

e Pairing Geometry in GA Mismatches pends Entirely on the Neighboring Sequence — **J.-W. Cheng, S.-H. Chou and B. R. Reid** — 1037–1041

icles

en, Eight and Nine-membered Anticodon Loop ants of $tRNA_2^{Arg}$ which Cause +1 meshifting. Tolerance of DHU Arm and Other ondary Mutations — **T. M. F. Tuohy, S. Thompson, R. F. Gesteland and J. F. Atkins** — 1042–1054

thetase Competition and tRNA Context ermine the *in Vivo* Identity of tRNA criminator Mutants — **J. M. Sherman, K. Rogers, M. J. Rogers and D. Söll** — 1055–1062

ography of Transcription Factor Complexes on *Saccharomyces cerevisiae* 5 S RNA Gene — **B. R. Braun, B. Bartholomew, G. A. Kassavetis and E. P. Geiduschek** — 1063–1077

ictural Requirements for the Processing of *herichia coli* 5 S Ribosomal RNA by RNase E *Vitro* — **R. S. Cormack and G. A. Mackie** — 1078–1090

ctional Analysis of Box II Mutations in Yeast -specific Recombinases Flp and R. Significance mino Acid Conservation within the Int Family the Yeast Sub-family — **J. Lee, M.-C. Serre, S.-H. Yang, I. Whang, H. Araki, Y. Oshima and M. Jayaram** — 1091–1103

rlocking of Plasmid DNAs due to *Lac* ressor–Operator Interaction — **H.-Y. Wu, K. Lau and L. F. Liu** — 1104–1114

Induces a Bend Within the Transcription or IIIA-binding Region of the 5 S RNA Gene — **J. Nickol and D. C. Rau** — 1115–1123

tures of Spliceosome Evolution and Function rred from an Analysis of the Information at nan Splice Sites — **R. M. Stephens and T. D. Schneider** — 1124–1136

Structure-related Properties of the Mutagenic Lesion 6-*O*-Methylguanine in DNA	**C.-W. Wong, N.-W. Tan and B. F. L. Li**	1137–11
Organization and Ordered Expression of *Caulobacter* Genes Encoding Flagellar Basal Body Rod and Ring Proteins	**A. Dingwall, J. D. Garman and L. Shapiro**	1147–11
Role of B13 Glu in Insulin Assembly. The Hexamer Structure of Recombinant Mutant (B13 Glu → Gln) Insulin	**G. A. Bentley, J. Brange, Z. Derewenda, E. J. Dodson, G. G. Dodson, J. Markussen, A. J. Wilkinson, A. Wollmer and B. Xiao**	1163–11
Calmodulin Structure Refined at 1·7 Å Resolution	**R. Chattopadhyaya, W. E. Meador, A. R. Means and F. A. Quiocho**	1177–11
Nuclear Magnetic Resonance Solution Structure of Hirudin(1-51) and Comparison with Corresponding Three-dimensional Structures Determined using the Complete 65-Residue Hirudin Polypeptide Chain	**T. Szyperski, P. Güntert, S. R. Stone and K. Wüthrich**	1193–12
Impact of Protein–Protein Contacts on the Conformation of Thrombin-bound Hirudin Studied by Comparison with the Nuclear Magnetic Resonance Solution Structure of Hirudin(1-51)	**T. Szyperski, P. Güntert, S. R. Stone, A. Tulinsky, W. Bode, R. Huber and K. Wüthrich**	1206–12
Structure of Cobalt Carbonic Anhydrase Complexed with Bicarbonate	**K. Håkansson and A. Wehnert**	1212–12
Determination of the Solution Structures of Domains II and III of Protein G from *Streptococcus* by ^{1}H Nuclear Magnetic Resonance	**L.-Y. Lian, J. P. Derrick, M. J. Sutcliffe, J. C. Yang and G. C. K. Roberts**	1219–12
Secondary Structure Changes Stabilize the Reactive-centre Cleaved Form of SERPINs. A study by ^{1}H Nuclear Magnetic Resonance and Fourier Transform Infrared Spectroscopy	**S. J. Perkins, K. F. Smith, A. S. Nealis, P. I. Haris, D. Chapman, C. J. Bauer and R. A. Harrison**	1235–12
Crystallization Notes		
Crystallization and Preliminary X-ray Studies of the Pectate Lyase from *Bacillus subtilis*	**J. Jenkins, W. Nasser, M. Scott, R. Pickersgill, J.-C. Vignon and J. Robert-Baudouy**	1255–12
Purification and Crystallization of the Light Harvesting LH1 Complex from *Rhodobacter sphaeroides*	**R. S. Nunn, P. J. Artymiuk, P. J. Baker, D. W. Rice and C. N. Hunter**	1259–12
Crystallization and Preliminary X-ray Analysis of Three Serotypes of Foot-and-Mouth Disease Virus	**S. Curry, R. Abu-Ghazaleh, W. Blakemore, E. Fry, T. Jackson, A. King, S. Lea, D. Logan, J. Newman and D. Stuart**	1263–1
Crystallization and Preliminary X-ray Analysis of Human Angiogenin	**K. Ravi Acharya, V. Subramanian, R. Shapiro, J. F. Riordan and B. L. Vallee**	1269–1
Crystallization and Preliminary X-ray Diffraction Analysis of a Plant Ribonuclease from the Seeds of the Bitter Gourd *Momordica charantia*	**A. De and G. Funatsu**	1271–1
Erratum		1
Announcement		1
Author Index		1277–1

Keyword Index

nidulans
Chromatin Structure of *Schizosaccharomyces pombe*. A Nucleosome Repeat Length that is Shorter than the Chromatosomal DNA Length, **226**, 1009–1025.

***niger* proteinase A**
Crystallization and Preliminary X-ray Investigation of Proteinase A, a Non-pepsin-type Acid Proteinase from *Aspergillus niger* var. *macrosporus*, **223**, 373–375.

BC excinuclease
Electron Microscopic Study of (A)BC Excinuclease. DNA is Sharply Bent in the UvrB–DNA Complex, **226**, 425–432.

C transporter
DNA Sequence Analysis of 66 kb of the Human MHC Class II Region Encoding a Cluster of Genes for Antigen Processing, **228**, 433–441.

-*N*-acetylchitotriose
Refinement of an Enzyme Complex with Inhibitor Bound at Partial Occupancy. Hen Egg-white Lysozyme and tri-*N*-acetylchitotriose at 1·75 Å Resolution, **224**, 613 628.

:tylcholinesterase
Minigene Rescues Acetylcholinesterase Lethal Mutations in *Drosophila melanogaster*, **223**, 17–22.

in
Temperature Dependence and Arrhenius Activation Energy of F-actin Velocity Generated *in Vitro* by Skeletal *Myosin*, **224**, 1029–1038.
Crystallization of the Complex of Actin with Gelsolin Segment 1, **226**, 899–901.
Occurrence of an Actin-inserting Domain in Tensin, **227**, 593–594.
Amino Acid Sequence of Yeast Hemoglobin. A Two-domain Structure, **227**, 948–954.
Tunicate Muscle Actin Genes. Structure and Organization as a Gene Cluster, **227**, 955–960.
Structural Basis for the Destabilization of F-Actin by Phosphate Release Following ATP Hydrolysis, **227**, 1043–1053.

inomycin
Crystal Structure of the 2:1 Complex Between d(GAAGCTTC) and the Anticancer Drug Actinomycin D, **225**, 445–456.

omyosin
Transients in Orientation of a Fluorescent Cross-bridge Probe Following Photolysis of Caged Nucleotides in Skeletal Muscle Fibres, **223**, 185–203.
Electron Microscopy of the Actin–Myosin Head Complex in the Presence of ATP, **223**, 391–397.

'l-coenzyme A binding protein
Three-dimensional *Structure* in Solution of Acyl-coenzyme A Binding Protein from Bovine Liver, **226**, 1131–1141.
Acyl-CoA-binding Protein/Diazepam-binding Inhibitor Gene and Pseudogenes. A Typical Housekeeping Gene Family, **228**, 1011–1022.

'ltransferase
Expression, Purification and Crystallization of the *Vibrio harveyi* Acyltransferase, **227**, 572–574.

:nosine deaminase
Refined 2·5 Å Structure of Murine Adenosine Deaminase at pH 6·0, **226**, 917–921.

:novirus
Control of Adenovirus Major Late Gene Expression at Multiple Levels, **225**, 287–298.
Structural Alterations of Double-stranded DNA in Complex with the Adenovirus DNA-binding Protein. Implications for its Function in DNA Replication, **225**, 999–1011.
Recombination Between Adenovirus Type 12 DNA and a Hamster Preinsertion Sequence in a Cell-free System. Patch Homologies and Fractionation of Nuclear Extracts, **226**, 117–126.
New Triple-helical Model for the Shaft of the Adenovirus Fibre, **226**, 1073–1084.

Adenovirus VA RNA
Adenovirus VARNA1 Gene B Block Promoter Element Sequences Required for Transcription and for Interaction with Transcription Factors, **227**, 1068–1085.

Adenovirus VA RNA_I
Control of Adenovirus Major Late Gene Expression at Multiple Levels, **225**, 287–298.

Adenylate cyclase
From Adenylate Cyclase to Guanylate Cyclase. Mutational Analysis of a Change in Substrate Specificity, **225**, 933–938.

Adenylate kinase
Structure of the Complex Between Adenylate Kinase from *Escherichia coli* and the Inhibitor Ap_5A Refined at 1·9 Å Resolution. A Model for a Catalytic Transition State., **224**, 159–177.

Adhesion pili
Helical Structure of P Pili from *Escherichia coli*. Evidence from X-ray Fiber Diffraction and Scanning Transmission Electron Microscopy, **228**, 735–742.

Adrenodoxin
Crystallization and X-ray Examination of Bovine Adrenodoxin, **227**, 945–947.

Aeromonas
Biochemical Characterization of the Major Structural Domain, **228**, 652–661.

Affinity chromatography
General Mutagenesis/Gene Expression Procedure for the Construction of Variant Immunoglobulin Domains in *Escherichia coli*. Production of the Bence-Jones Protein REI_v *via* Fusion to β-Lactamase, **228**, 351–358.

African Swine Fever Virus
African Swine Fever Virus Encodes a Gene with Extensive Homology to Type II DNA Topoisomerases, **228**, 1003–1010.

Agarose gel electrophoresis
Formation of the Right before the Left Mature DNA End during Packaging–Cleavage of Bacteriophage T7 DNA Concatemers, **226**, 311–317.

Aggregation gene
Characterization of the F Plasmid Mating Aggregation Gene *traN* and of a New F Transfer Region Locus *trbE*, **225**, 299–311.

Agrin
Characterization of a Conserved Carboxy-terminal Sequence in Secreted Proteins and a Motif Implicated in Extracellular Protein Interactions, **227**, 367–370.

Alcohol dehydrogenase
Preliminary X-ray Crystallographic Studies on Alcohol Dehydrogenase from *Drosophila*, **227**, 356–358.

Aldehyde dehydrogenase
Crystallization and Preliminary X-ray Investigation of Bovine Liver Mitochondrial Aldehyde Dehydrogenase, **227**, 1255–1257.

Alignment code
Unique Side-chain Conformation Encoding for Chirality and Azimuthal Orientation in the Molecular Packing of Skin Collagen, **228**, 963–969.

Alkaline phosphatase
Signal Sequences Containing Multiple Aromatic Residues, **224**, 77–85.

Membrane Protein Spanning Segments as Export Signals, **224**, 539–543.

Alkaline protease

X-ray Structure Determination and Comparison of Two Crystal Forms of a Variant (Asn115Arg) of the Alkaline Protease from *Bacillus alcalophilus* Refined at 1·85 Å Resolution, **228**, 108–117.

Alkalophilic bacterium

Crystal Structure of the Alkaline Proteinase Savinase™ from *Bacillus lentus* at 1·4 Å Resolution, **223**, 427–445.

Allostery

Structure of a Ternary Complex of an Allosteric Lactate Dehydrogenase from *Bacillus stearothermophilus* at 2·5 Å Resolution, **223**, 317–335.

Purification and Crystallization of Glycogen Phosphorylase from *Saccharomyces cerevisiae*, **225**, 1027–1034.

Crystallization and Preliminary Crystallographic Studies of Glucosamine-6-phosphate Deaminase from *Escherichia coli* K12, **226**, 1283–1286.

X-ray Diffraction Study of Di and Tetra-ligated T-state Hemoglobin from High Salt Crystals, **227**, 480–492.

Key Residues in the Allosteric Transition of *Bacillus stearothermophilus* Pyruvate Kinase Identified by Site-directed Mutagenesis, **228**, 265–276.

Alphavirus

Crystallization of Sindbis Virus and its Nucleocapsid, **226**, 277–280.

Alu DNA

Alu RNA Transcripts in Human Embryonal Carcinoma Cells. Model of Post-transcriptional Selection of Master Sequences, **226**, 689–706.

Alzheimer's disease

Metal Ion-induced Conformational Changes of Phosphorylated Fragments of Human Neurofilament (NF-M) Protein, **223**, 673–682.

Solution Conformations and Aggregational Properties of Synthetic Amyloid β-Peptides of Alzheimer's Disease. Analysis of Circular Dichroism Spectra, **225**, 1075–1093.

Amber suppressor

Synthetase Competition and tRNA Context Determine the *in Vivo* Identity of tRNA Discriminator Mutants, **228**, 1055–1062.

Amidohydrolase

Crystal Structure Analysis, Refinement and Enzymatic Reaction Mechanism of *N*-Carbamoylsarcosine Amidohydrolase from *Arthrobacter sp.* at 2·0 Å Resolution, **226**, 1111–1130.

Aminoacylation

Mutational Analysis of the Pseudoknot in the tRNA-like Structure of Turnip Yellow Mosaic Virus RNA. Aminoacylation Efficiency and RNA Pseudoknot Stability, **223**, 221–232.

Effect of Conformational Features on the Aminoacylation of tRNAs and Consequences on the Permutation of tRNA Specificities, **226**, 323–333.

Aminoacyl-tRNA synthetase

Domains of the *Escherichia coli* Threonyl-tRNA Synthetase Translational Operator and their Relation to Threonine tRNA Isoacceptors, **227**, 621–634.

Synthetase Competition and tRNA Context Determine the *in Vivo* Identity of tRNA Discriminator Mutants, **228**, 1055–1062.

ams

Cloning and Analysis of the Entire *Escherichia coli ams* Gene. *arms* is Identical to *hmp1* and Encodes a 114 kDa Protein that Migrates as a 180 kDa Protein, **228**, 30–40.

Amsacrine

Two Independent Amsacrine-resistant Human Myeloid Leukemia Cell Lines Share an Identical Point Mutation in the 170 kDa Form of Human Topoisomerase II, **223**, 837–843.

Amyloid protein

Binding of the Dye Congo Red to the Amyloid Protein Pig Insulin Reveals a Novel Homology amongst Amyloid-forming Peptide Sequences, **227**, 1205–1223.

Substitutions of Hydrophobic Amino Acids Reduce the Amyloidogenicity of Alzheimer's Disease βA4 Peptides, **228**, 460–473.

Anaesthetics

Order–Disorder Phenomena in Myelinated Nerve Sheath IV. The Disordering Effects of High Levels of Local Anaesthetics on Rat Sciatic and Optic Nerves, **22** 535–548.

Angiogenin

Crystallization and Preliminary X-ray Analysis Human Angiogenin, **228**, 1269–1270.

Annexin

Crystal and Molecular *Structure* of Human Annexin after Refinement. Implications for Structure, Membrane Binding and Ion Channel Formation of the Annexin Family of Proteins, **223**, 683–704.

A Neutron Solution Scattering Study of the *Structure* Annexin-V and its Binding to Lipid Vesicles, **22** 1271–1278.

Antibody

Crystallization and Preliminary Crystallographic Data *Escherichia coli* TEM1 β-Lactamase, **223**, 377–380.

Analysis of the Chicken Fast Myosin Heavy Chain Fami Localization of Isoform-specific Antibody Epitop and Regions of Divergence, **225**, 1143–1151.

Selection of Phage Antibodies by Binding Affinity. Mim king Affinity Maturation, **226**, 889–896.

Refined Crystal Structure of the Influenza Virus N9 Ne aminidase–NC41 Fab Complex, **227**, 122–148.

Crystal Structures of two Mutant Neuraminidase–An body Complexes with Amino Acid Substitutions in Interface, **227**, 149–159.

Crystal Structure of a Chimeric Fab′ Fragment′ of Antibody Binding Tumour Cells, **227**, 253–264.

Structural Repertoire of the Human V_H Segments, **2** 799–817.

X-ray Structure Determination of Telokin, the C-termi Domain of Myosin Light Chain Kinase, at 2·8 Resolution, **227**, 840–851.

Crystallization and Preliminary X-ray Analysis of Complex between a Mouse Fab Fragment and a Sin IgG-Binding Domain from Streptococcal Protein **227**, 1253–1254.

General Mutagenesis/Gene Expression Procedure for Construction of Variant Immunoglobulin Domains *Escherichia coli*. Production of the Bence-Jones P tein REI_v *via* Fusion to β-Lactamase, **228**, 351–358

Antibody affinity

Selection of Phage Antibodies by Binding Affinity. Mim king Affinity Maturation, **226**, 889–896.

Antibody complexes

New Algorithm to Model Protein–Protein Recognit Based on Surface Complementarity. Applications Antibody–Antigen Docking, **228**, 277–297.

Folding on the Ribosome of *Escherichia coli* Tryptop Synthase β Subunit Nascent Chains Probed with Conformation-dependent Monoclonal Antibody, **2** 359–365.

Antibody Fab

Crystal Structure of a Chimeric Fab′ Fragment′ of Antibody Binding Tumour Cells, **227**, 253–264.

Crystallization and Preliminary X-ray Analysis of Complex between a Mouse Fab Fragment and a Sir IgG-Binding Domain from Streptococcal Protein **227**, 1253–1254.

Antibody fab fragments

Crystallization of the Fab Fragments of Anti-pep Monoclonal Antibodies and a Complex with Pept **223**, 381–382.

Antibody Fv

Three-dimensional Structure of an Fv from a Human Immunoglobulin, **228**, 188–207.

tibody Fv-fragment
Improving the Antigen Affinity of an Antibody Fv-fragment by Protein Design, **224**, 913–918.

tibody heavy chain variable region
The Repertoire of Human Germline V_H Sequences Reveals about Fifty Groups of V_H Segments with Different Hypervariable Loops, **227**, 776–798.

tibody humanization
Crystal Structure of a Chimeric Fab′ Fragment′ of an Antibody Binding Tumour Cells, **227**, 253–264.

tibody hypervariable loop
Antibody Framework Residues Affecting the Conformation of the Hypervariable Loops, **224**, 487–500.

tibody hypervariable regions
Structural Repertoire of the Human V_H Segments, **227**, 799–817.

tibody IgA protease
General Mutagenesis/Gene Expression Procedure for the Construction of Variant Immunoglobulin Domains in *Escherichia coli*. Production of the Bence-Jones Protein REI_v *via* Fusion to β-Lactamase, **228**, 351–358.

tibody IgG binding domain
Localization of Bound Water in the Solution Structure of the Immunoglobulin Binding Domain of Streptococcal Protein G. Evidence for Solvent-induced Helical Distortion in Solution, **223**, 853–856.

tibody IgG binding domains
Determination of the Solution Structures of Domains II and III of Protein G from *Streptococcus* by ^1H Nuclear Magnetic Resonance, **228**, 1219–1234.

tibody IgM
Three-dimensional Structure of an Fv from a Human IgM Immunoglobulin, **228**, 188–207.

tibody maturation
Selection of Phage Antibodies by Binding Affinity. Mimicking Affinity Maturation, **226**, 889–896.

tibody structure
Crystallization of the Fab Fragments of Anti-peptide Monoclonal Antibodies and a Complex with Peptide, **223**, 381–382.
Antibody Framework Residues Affecting the Conformation of the Hypervariable Loops, **224**, 487–500.
Improving the Antigen Affinity of an Antibody Fv-fragment by Protein Design, **224**, 913–918.
Refined Crystal Structure of a Recombinant Immunoglobulin Domain and a Complementarity-determining Region 1-grafted Mutant, **225**, 739–753.
High Resolution Functional Analysis of Antibody–Antigen Interactions, **226**, 851–865.
Crystal Structures of two Mutant Neuraminidase–Antibody Complexes with Amino Acid Substitutions in the Interface, **227**, 149–159.
Structural Repertoire of the Human V_H Segments, **227**, 799–817.

tifreeze protein
Energy-optimized *Structure* of Antifreeze Protein and Its Binding Mechanism, **223**, 509–517.

tigelling agents
Location of Potential Binding Sites on Deoxy Hemoglobin for the Design of Antigelling Agents, **223**, 791–800.

timicrobial peptides
Extreme Divergence of a Novel Wheat Thionin Generated by a Mutational Burst Specifically Affecting the Mature Protein Domain of the Precursor, **224**, 1003–1009.

tisense RNA
Mechanism of Post-segregational Killing by the *hok/sok* System of Plasmid R1. Sok Antisense RNA Regulates *hok* Gene Expression Indirectly Through the Overlapping *mok* Gene, **223**, 41–54.
Mechanism of Killer Gene Activation. Antisense RNA-dependent RNase III Cleavage Ensures Rapid Turnover of the Stable Hok, SrnB and PndA Effector Messenger RNAs, **226**, 637–649.

Antithrombotics
Refined 2·3 Å X-ray Crystal Structure of Bovine Thrombin Complexes Formed with the Benzamidine and Arginine-based Thrombin Inhibitors NAPAP, 4-TAPAP and MQPA. A Starting Point for Improving Antithrombotics, **226**, 1085–1099.

Aplysia
Solution ^1H *Nuclear Magnetic Resonance* Determination of Hydrogen Bonding of the E10 (66) Arg Side-chain to the Bound Ligand in *Aplysia* Cyano-met Myoglobin, **224**, 891–897.

Arabidopsis
Genes Encoding a Histone H3.3-like Variant in *Arabidopsis* Contain Invervening Sequences, **225**, 569–574.

Arginase
Crystallization and Oligomeric Structure of Rat Liver Arginase, **224**, 1175–1177.

Arginine deiminase
RNA Processing Modulates the Expression of the *arcDABC* Operon in *Pseudomonas aeruginosa*, **226**, 943–957.

Arginine-aspartate interaction
Mutagenesis of a Conserved Region of the Gene Encoding the FLP Recombinase of *Saccharomyces cerevisiae*. A Role for Arginine 191 in Binding and Ligation, **225**, 313–326.
Towards an Understanding of the Arginine–Aspartate Interaction, **226**, 251–262.

Arrhenius energy
Temperature Dependence and Arrhenius Activation Energy of F-actin Velocity Generated *in Vitro* by Skeletal *Myosin*, **224**, 1029–1038.

Artificial intelligence
Prediction of Gene Structure, **226**, 141–157.

Ascaris suum
Crystallization of the NAD-dependent Malic Enzyme from the Parasitic Nematode *Ascaris suum*, **226**, 565–569.

Ascorbate oxidase
Refined *Crystal Structure* of Ascorbate Oxidase at 1·9 Å Resolution, **224**, 179–205.

Aspartate aminotransferase
X-ray Structure Refinement and Comparison of Three Forms of Mitochondrial Aspartate Aminotransferase, **225**, 495–517.

Aspartate–β–semialdehyde dehydrogenase
Crystallization and Preliminary Crystallographic Analysis of Aspartate–β–semialdehyde Dehydrogenase from *Escherichia coli*, **228**, 300–301.

Aspartic proteinase
Human Liver Cathepsin D. Purification, Crystallization and Preliminary X-ray Diffraction Analysis of a Lysosomal Enzyme, **227**, 265–270.
Crystallization and Initial Crystallographic Results for Pepstatin A Inhibited Bovine Cathepsin D, **227**, 1265–1268.

Assembly
Characterization of Assembly Intermediates of NADH : Ubiquinone Oxidoreductase (Complex I) Accumulated in *Neurospora* Mitochondria by Gene Disruption, **227**, 1032–1042.

ATPγS
ATP Hydrolysis and the Displaced Strand are Two Factors that Determine the Polarity of RecA-promoted DNA Strand Exchange, **227**, 38–53.

ATP synthase
Large ATP Synthase Operon of the Red Alga *Antithamnion* sp. Resembles the Corresponding Operon in Cyanobacteria, **227**, 961–970.
The Expression, Purification and Crystallization of the ε Subunit of the F_1 Portion of the ATPase of *Escherichia coli*, **228**, 306–309.

ATPase
Electron Microscopy of the Actin–Myosin Head Complex in the Presence of ATP, **223**, 391–397.
Ubiquitous Soluble Mg^{2+}–ATPase Complex. A *Structural* Study, **223**, 557–571.
Chloroplast ATPase Genes in the Diatom *Odontella sinensis* Reflect Cyanobacterial Characters in Structure and Arrangement, **224**, 529–536.
The Expression, Purification and Crystallization of the ε Subunit of the F_1 Portion of the ATPase of *Escherichia coli*, **228**, 306–309.

Autoantigen
Ro Ribonucleoprotein Assembly *In Vitro*. Identification of RNA–Protein and Protein–Protein Interactions, **227**, 361–366.

B. alcalophilus
X-ray Structure Determination and Comparison of Two Crystal Forms of a Variant (Asn115Arg) of the Alkaline Protease from *Bacillus alcalophilus* Refined at 1·85 Å Resolution, **228**, 108–117.

Bacillus stearothermophilus
Structure of a Ternary Complex of an Allosteric Lactate Dehydrogenase from *Bacillus stearothermophilus* at 2·5 Å Resolution, **223**, 317–335.
Purification, Crystallization and Preliminary X-ray Analysis of the 3-phosphoglycerate Kinase from *Bacillus stearothermophilus*, **227**, 1263–1264.
Key Residues in the Allosteric Transition of *Bacillus stearothermophilus* Pyruvate Kinase Identified by Site-directed Mutagenesis, **228**, 265–276.

Bacillus subtilis
Mechanism of Initiation of Transcription by *Bacillus subtilis* RNA Polymerase at Several Promoters, **223**, 399–414.
Developmental Regulation of Transcription of the *Bacillus subtilis ftsAZ* Operon, **224**, 967–979.
Sporulation Regulatory Protein GerE from *Bacillus subtilis* Binds to and Can Activate or Repress Transcription from Promoters for Mother-cell-specific Genes, **226**, 1037 1050.
Definition and Polarity of Action of DNA Replication Terminators in *Bacillus subtilis*, **227**, 648–657.
Fate of the SpoIIID Switch Protein during *Bacillus subtilis* Sporulation Depends on the Mother-cell Sigma Factor, σ^K, **228**, 840–849.
Crystallization and Preliminary X-ray Studies of the Pectate Lyase from *Bacillus subtilis*, **228**, 1255–1258.

Bacterial transport
Ribose and Glucose–Galactose Receptors. Competitors in Bacterial Chemotaxis, **227**, 418–440.

Bacteriophage
Conformation of DNA Packaged in Bacteriophage T7. Analysis by use of Ultraviolet Light-induced DNA–Capsid Cross-linking, **223**, 999–1011.
Molecular Analysis of the *Bacillus subtilis* Bacteriophage SPP1 Region Encompassing Genes *1* to *6*. The Products of Gene *1* and Gene *2* are Required for *pac* Cleavage, **224**, 87–102.
Bacteriophage P22 Portal Protein is Part of the Gauge that Regulates Packing Density of Intravirion DNA, **224**, 1055–1074.
Identification of a Gene in *Bacillus subtilis* Bacteriophage SPP1 Determining the Amount of Packaged DNA, **225**, 81–92.
Mutant Conformation of p53. Precise Epitope Mapping Using a Filamentous Phage Epitope Library, **225**, 577–583.
Formation of the Right before the Left Mature DNA End during Packaging–Cleavage of Bacteriophage T7 DNA Concatemers, **226**, 311–317.
Three-dimensional Structure of a Cloning Vector. X-ray Diffraction Studies of Filamentous Bacteriophage M13 at 7 Å Resolution, **226**, 455–470.
Selection of Phage Antibodies by Binding Affinity. Mimicking Affinity Maturation, **226**, 889–896.
Simplified Methods for Construction, Assessment and Rapid Screening of Peptide Libraries in Bacteriophage, **227**, 711–718.
Construction of a Microphage Variant of Filamentous Bacteriophage, **228**, 720–724.

Bacteriophage capsid assembly
Mutations That Eliminate the Requirement for the Vi... tex Protein in Bacteriophage T4 Capsid Assembly, **224**, 601–611.

Bacteriophage f1
Mutational Analysis of an Inherently Defective *Translation* Initiation Site, **224**, 1039–1054.

Bacteriophage filamentous
Mutant Conformation of p53. Precise Epitope Mapping Using a Filamentous Phage Epitope Library, **22**... 577–583.
Bypassing Immunisation. Human Antibodies from Synthetic Repertoires of Germ Line V_H-Gene Segments Rearranged *in vitro*, **227**, 381–388.
Interchangeability of Related Proteins and Autonomy of Function. The Morphogenetic Proteins of Filamentous Phage f1 and IKe Cannot Replace One Another, **22**... 453–462.

Bacteriophage HK022
The *Escherichia coli rpoB60* Mutation Blocks Antitermination by Coliphage HK022 *Q*-function, **22**... 29–37.

Bacteriophage lytic growth
Mutational Analysis of the Bacteriophage P1 Late Promoter Sequence P_s, **228**, 101–107.

Bacteriophage M13
Three-dimensional Structure of a Cloning Vector. X-ray Diffraction Studies of Filamentous Bacteriophage M... at 7 Å Resolution, **226**, 455–470.
Terminating a Macromolecular Helix. Structural Model for the Minor Proteins of Bacteriophage M13, **22**... 885–892.

Bacteriophage M13 minor proteins
Terminating a Macromolecular Helix. Structural Model for the Minor Proteins of Bacteriophage M13, **22**... 885–892.

Bacteriophage morphogenesis
Interchangeability of Related Proteins and Autonomy of Function. The Morphogenetic Proteins of Filamentous Phage f1 and IKe Cannot Replace One Another, **22**... 453–462.

Bacteriophage λ
Supercoiling, Integration Host Factor, and a Dual Promoter System, Participate in the Control of Bacteriophage α pL Promoter, **224**, 937–948.
Stability of Coliphage λ DNA Replication Initiator, λO Protein, **226**, 675–680.
Inheritance of the Replication Complex by One of the Daughter Copies During λ Plasmid Replication in *Escherichia coli*, **226**, 681–688.
Stimulation of the Phage λ pL Promoter by Integration Host Factor Requires the Carboxy Terminus of the Subunit of RNA Polymerase, **227**, 985–990.
Genetic Analysis of *cosB*, the Binding Site for Terminase, the DNA Packaging Enzyme of Bacteriophage λ, **22**... 58–71.
Genetic Analysis of Mutations Affecting Terminase, a Bacteriophage λ DNA Packaging Enzyme, that Suppress Mutations in *cosB*, the Terminase Binding **228**, 72–87.
Is the Bacteriophage Lambda Lysozyme an Evolutionary Link or a Hybrid between the C and V-type Lysozymes? Homology Analysis and Detection of the Catalytic Amino Acid Residues, **228**, 529–538.

Bacteriophage P1
Bacteriophage P1 Genes Involved in the Recognition and Cleavage of the Phage Packaging Site (*pac*), **22**... 977–989.

Molecular Analysis of the *Bacillus subtilis* Bacteriophage SPP1 Region Encompassing Genes *1* to *6*. The Products of Gene *1* and Gene *2* are Required for *pac* Cleavage, **224**, 87–102.
Cre-*lox* Recombination in *Escherichia coli* Cells. Mechanistic Differences from the *in Vitro* Reaction, **226**, 661–673.
Mutational Analysis of the Bacteriophage P1 Late Promoter Sequence P_s, **228**, 101–107.

eriophage P22
Bacteriophage P22 Portal Protein is Part of the Gauge that Regulates Packing Density of Intravirion DNA, **224**, 1055–1074.
Molecular Genetic Analysis of Bacteriophage P22 Gene *3* Product, a Protein Involved in the Initiation of Headful DNA Packaging, **227**, 1086–1099.

eriophage R17
Selection of High Affinity RNA Ligands to the Bacteriophage R17 Coat Protein, **228**, 862–869.

eriophage SPP1
Molecular Analysis of the *Bacillus subtilis* Bacteriophage SPP1 Region Encompassing Genes *1* to *6*. The Products of Gene *1* and Gene *2* are Required for *pac* Cleavage, **224**, 87–102.
Identification of a Gene in *Bacillus subtilis* Bacteriophage SPP1 Determining the Amount of Packaged DNA, **225**, 81–92.

eriophage structural proteins
Construction of a Microphage Variant of Filamentous Bacteriophage, **228**, 720–724.

eriophage T3
Three-dimensional *Structure* of T3 Connector Purified from Overexpressing Bacteria, **224**, 103–112.

eriophage T4
GTPase Activity of Bacteriophage T4 Sheath Protein, **223**, 23–25.
Cryoelectron Microscopic Visualization of Functional Subassemblies of the Bacteriophage T4 DNA Replication Complex, **224**, 395–412.
Mutations That Eliminate the Requirement for the Vertex Protein in Bacteriophage T4 Capsid Assembly, **224**, 601–611.
Role of MotA Transcription Factor in Bacteriophage T4 DNA Replication, **228**, 88–100.
Conformational Changes of a Viral Capsid Protein. Thermodynamic Rationale for Proteolytic Regulation of Bacteriophage T4 Capsid Expansion, Co-operativity, and Super-stabilization by Soc Binding, **228**, 870–884.

eriophage T7
Isolation and Characterization of Mutant Bacteriophage T7 RNA Polymerases, **224**, 307–318.
Model for the Mechanism of Bacteriophage T7 RNAP *Transcription* Initiation and Termination, **224**, 319–334.
Asp537, Asp812 are Essential and Lys631, His811 are Catalytically Significant in Bacteriophage T7 RNA Polymerase Activity, **226**, 37–45.

eriophage ϕ29
Mutant Prohead RNAs in the *in Vitro* Packaging of Bacteriophageϕ29 DNA–gp3, **223**, 991–998.

eriorhodopsin
Electrostatic Calculations of the pK_a Values of Ionizable Groups in Bacteriorhodopsin, **224**, 473–486.

ey
Crystallization of an Endochitinase from *Hordeum vulgare* L. Seeds, **225**, 565–567.
Crystallization and Preliminary X-ray Diffraction Studies of a Peroxidase from Barley Grain, **228**, 690–692.

ıase
Co-operative Interactions during Protein Folding, **224**, 733–740.
α-Helix Stability in Proteins. I. Empirical Correlations Concerning Substitution of Side-chains at the N and C-caps and the Replacement of Alanine by Glycine or Serine at Solvent-exposed Surfaces, **227**, 544–559.
α-Helix Stability in Proteins. II. Factors that Influence Stability at an Internal Position, **227**, 560–568.

B-cell
The Rhombotin Gene Family Encode Related LIM-domain Proteins whose Differing Expression Suggests Multiple Roles in Mouse Development, **226**, 747–761.

Berenil
Crystal Structure of a Berenil–d(CGCAAATTTGCG) Complex. An Example of Drug–DNA Recognition Based on Sequence-dependent Structural Features, **226**, 481–490.

Bestatin
Structure Determination and Refinement of Bovine Lens Leucine Aminopeptidase and its Complex with Bestatin, **224**, 113–140.

Biantennary glycan
Crystallization and Preliminary X-ray Diffraction Study of *Lathyrus ochrus* Isolectin II Complexed to the Human Lactotransferrin N2 Fragment, **227**, 938–941.

Bicarbonate
Structure of Cobalt Carbonic Anhydrase Complexed with Bicarbonate, **228**, 1212–1218.

Mg^{2+}-binding site
Structural Details of Ribonuclease H from *Escherichia coli* as Refined to an Atomic Resolution, **223**, 1029–1052.
Important 2′-hydroxyl Groups in Model Substrates for M1 RNA, the Catalytic RNA Subunit of RNase P from *Escherichia coli*, **226**, 399–409.

Bioluminescence
Crystallization of *Photobacterium leiognathi* Non-fluorescent Flavoprotein, an Unusual Flavoprotein with Limited Sequence Identity to Bacterial Luciferase, **224**, 523–526.

Birefringence
Substitutions of Hydrophobic Amino Acids Reduce the Amyloidogenicity of Alzheimer's Disease βA4 Peptides, **228**, 460–473.

Fructose-1,6-bisphosphate aldolase
Initiating a Crystallographic Study of a Class II Fructose-1,6-bisphosphate Aldolase, **225**, 1137–1141.

Bisulfite
Structure of Native and Apo Carbonic Anhydrase II and Structure of some of Its Anion–Ligand Complexes, **227**, 1192–1204.

Blue copper oxidase
Refined *Crystal Structure* of Ascorbate Oxidase at 1·9 Å Resolution, **224**, 179–205.

Bovine α-chymotrypsin
Crystal and Molecular *Structure* of the Bovine α-Chymotrypsin–Eglin *c* Complex at 2·0 Å Resolution, **225**, 107–123.

Bovine pancreatic trypsin inhibitor
Kinetic Roles and Conformational Properties of the Non-native Two-disulphide Intermediates in the Refolding of Bovine Pancreatic Trypsin Inhibitor, **224**, 905–911.
Determination of a High-quality Nuclear Magnetic Resonance Solution Structure of the Bovine Pancreatic Trypsin Inhibitor and Comparison with Three Crystal Structures, **227**, 757–775.

Bovine papilloma virus-1
Rolling-circle Replication of a High-copy BPV-1 Plasmid, **228**, 1–6.

Bowman-Birk inhibitor
Identification of a Protein-binding Surface by Differential Amide Hydrogen-exchange Measurements. Application to bowman-Birk serine-protease Inhibitor, **225**, 873–889.

κ-bungarotoxin
Crystallization of κ-Bungarotoxin: Preliminary X-ray Data Obtained from the Venom-derived Protein, **226**, 559–562.

Bungarus multicinctus
Crystallization of κ-Bungarotoxin: Preliminary X-ray Data Obtained from the Venom-derived Protein, **226**, 559–562.

Caenorhabditis elegans
Molecular and Genomic Organization of Clusters of Repetitive DNA Sequences in *Caenorhabditis elegans*, **226**, 159–168.
The P-glycoprotein Gene Family of *Caenorhabditis elegans*. Cloning and Characterization of Genomic and Complementary DNA Sequences, **228**, 701–711.

Caged ATP
Transients in Orientation of a Fluorescent Cross-bridge Probe Following Photolysis of Caged Nucleotides in Skeletal Muscle Fibres, **223**, 185–203.

Calbindin
Proline *Cis–Trans* Isomers in Calbindin D_{9k} Observed by X-ray Crystallography, **223**, 601–606.

Calcium binding protein
Crystal Structure of the Alkaline Proteinase Savinase™ from *Bacillus lentus* at 1·4 Å Resolution, **223**, 427–445.
Crystal and Molecular *Structure* of Human Annexin V after Refinement. Implications for Structure, Membrane Binding and Ion Channel Formation of the Annexin Family of Proteins, **223**, 683–704.
Crystal Structure of the Unique Parvalbumin Component from Muscle of the Leopard Shark (*Triakis semifasciata*). The First X-ray Study of an α-Parvalbumin, **223**, 705–720.
X-ray *Crystal Structure* of Canine Myeloperoxidase at 3 Å Resolution, **226**, 185–207.
Nuclear Magnetic Resonance Studies of the Internal Dynamics in Apo, $(Cd^{2+})_1$ and $(Ca^{2+})_2$ Calbindin D_{9k}. The Rates of Amide Proton Exchange with Solvent, **227**, 1100–1117.

Calorimetry
Contribution of Hydration and Non-covalent Interactions to the Heat Capacity Effect on Protein Unfolding, **224**, 715–723.
Thermodynamic Consequences of the Removal of a Disulphide Bridge from Hen Lysozyme, **225**, 939–943.
Protein Interactions with Urea and Guanidinium Chloride. A Calorimetric Study, **226**, 491–505.
Domain Structure and Domain–Domain Interactions in the Carboxy-terminal Heparin Binding Region of Fibronectin, **227**, 1182–1191.
Absence of the Thermal Transition in Apo-α-Lactalbumin in the Molten Globule State. A Study by Differential Scanning Microcalorimetry, **228**, 347–350.
Conformational Changes of a Viral Capsid Protein. Thermodynamic Rationale for Proteolytic Regulation of Bacteriophage T4 Capsid Expansion, Co-operativity, and Super-stabilization by Soc Binding, **228**, 870–884.

cAMP
Upstream Curved Sequences Influence the Initiation of *Transcription* at the *Escherichia coli* Galactose Operon, **224**, 293–306.
Positive Regulation of the Expression of the *Escherichia coli pts* Operon. Identification of the Regulatory Regions, **226**, 623–635.

Camptothecin
Camptothecin Inhibits Both the Cleavage and Religation Reactions of Eukaryotic DNA Topoisomerase I, **228**, 1025–1030.

Candida albicans
Crystallization of the Exo(1,3)-β-Glucanase from *Candida albicans*, **225**, 217–218.

Candida norvogensis
Amino Acid Sequence of Yeast Hemoglobin. A Two-domain Structure, **227**, 948–954.

Carbonic anhydrase
Computer Simulation of the Initial Proton Transfer S
in Human Carbonic Anhydrase I, **224**, 7–14.
Structure of Native and Apo Carbonic Anhydrase II
Structure of some of Its Anion–Ligand Comple
227, 1192–1204.
Structure of Cobalt Carbonic Anhydrase Complexed w
Bicarbonate, **228**, 1212–1218.

Carboxylase/oxygenase
Mutation of Asparagine 111 of Rubisco from *Rhodospi*
lum rubrum Alters the Carboxylase/Oxygenase Sp
ficity, **225**, 891–896.

Carboxypeptidase A
Crystal Structure of the Complex between Carboxype
dase A and the Biproduct Analog Inhibitor L-Ben
succinate at 2·0 Å Resolution, **223**, 573–578.

Carcinogenesis
Mutagenicity of a Unique Apurinic/Apyrimidinic Site
Mammalian Cells, **227**, 981–984.

Catabolite activator protein
Regulation of Open Complex Formation at the *Esch*
chia coli Galactose Operon Promoters. Simultane
Interaction of RNA Polymerase, *gal* Repressor
CAP/cAMP, **224**, 15–29.
Positive Regulation of the Expression of the *Escheri*
coli pts Operon. Identification of the Regulato
Regions, **226**, 623–635.

Catalysis
The Folding of an Enzyme. I. Theory of Prote
Engineering Analysis of Stability and Pathway of
tein Folding, **224**, 771–782.
Mutational Substitution of Residues Implicated
Crystal Structure in Binding the Substrate Glutath
to Human Glutathione S-transferase π, **226**, 319–
Is the Bacteriophage Lambda Lysozyme an Evolutio
Link or a Hybrid between the C and V-type L
zymes? Homology Analysis and Detection of the C
lytic Amino Acid Residues, **228**, 529–538.

Catalytic RNA
Sequence and Structure of the Catalytic RNA of Hepa
Delta Virus Genomic RNA, **223**, 233–245.
Circle Reopening in the *Tetrahymena* Ribozyme Res
bles Site-specific Hydrolysis at the 3′ Splice Site,
351–360.
Important 2′-hydroxyl Groups in Model Substrates fo
RNA, the Catalytic RNA Subunit of RNase P f
Escherichia coli, **226**, 399–409.
Non-competitive Inhibition of Group I Intron RNA
splicing by Aminoglycoside Antibiotics, **226**, 935–
Several Regions of a tRNA Precursor Determine
Escherichia coli RNase P Cleavage Site, **22**
1019–1031.
Analysis of the Role of Phosphate Oxygens in the Gro
Intron from *Tetrahymena*, **228**, 743–758.

Cathepsin
Purification and Crystallization of Human Cathepsi
226, 555–557.
Crystallization and Preliminary X-ray Study of the C
epsin B Complexed with CA074, a Selective Inhib
227, 942–944.

Cathepsin D
Human Liver Cathepsin D. Purification, Crystalliza
and Preliminary X-ray Diffraction Analysis of a L
somal Enzyme, **227**, 265–270.
Crystallization and Initial Crystallographic Results
Pepstatin A Inhibited Bovine Cathepsin D, **2**
1265–1268.

Caulobacter crescentus
Cell-cycle Control of a Cloned Chromosomal Origi
Replication from *Caulobacter crescentus*, **226**, 959–

CD59
Gene Structure of Human CD59 and Demonstration
Discrete mRNAs are Generated by Alternative Pc
denylation, **227**, 971–976.

A
Strand-specific LINE-1 *Transcription* in Mouse F9 Cells Originates from the Youngest Phylogenetic Subgroup of LINE-1 Elements, **224**, 559–574.
Genes Encoding a Histone H3.3-like Variant in *Arabidopsis* Contain Invervening Sequences, **225**, 569–574.
Primary Structure of the Second Largest Subunit of Human RNA Polymerase II (or B), **226**, 1295–1299.

aging
Telomere End-replication Problem and Cell Aging, **225**, 951–960.

cycle
Cell-cycle Control of a Cloned Chromosomal Origin of Replication from *Caulobacter crescentus*, **226**, 959–977.

ılase
Crystallization and Preliminary X-ray Analysis of a Fungal Endoglucanase I, **228**, 970–972.

ılomonas fimi
Crystallization and Preliminary X-ray Diffraction Analysis of the Catalytic Domain of Cex, an Exo-β-1,4-glucanase and β-1,4-xylanase from the Bacterium *Cellulomonas fimi*, **228**, 693–695.

romere
Structure of the Pericentric Long Arm Region of the Human Y Chromosome, **228**, 421–432.

ɔs Game
Mathematical Characterization of Chaos Game Representation. New Algorithms for Nucleotide Sequence Analysis, **228**, 715–719.

ɔerone
Functional Analysis of the Intramolecular Chaperone. Mutational Hot Spots in the Subtilisin Pro-peptide and a Second-site Suppressor Mutation within the Subtilisin Molecule, **226**, 931–933.

notaxis
Substructure of the Flagellar Basal Body of *Salmonella typhimurium*, **223**, 171–184.
Thermal Motions of Surface α-Helices in the D-Galactose Chemosensory Receptor. Detection by Disulfide Trapping, **226**, 1219–1235.
Ribose and Glucose–Galactose Receptors. Competitors in Bacterial Chemotaxis, **227**, 418–440.

ese hamster ovary cells
Localization and DNA Sequence of a Replication Origin in the Rhodopsin Gene Locus of Chinese Hamster Cells, **224**, 343–358.

inase
Crystallization of Recombinant Chitinase from the Cloned *chi*A Gene of *Serratia marcescens*, **226**, 897–898.

roacetaldehyde
Intramolecular dG·dG·dC Triplex Detected in *Escherichia coli* Cells, **223**, 817–822.

era
A 9 Å Two-dimensional Projected *Structure* of Cholera Toxin B-subunit–G_{M1} Complexes Determined by Electron *Crystallography*, **226**, 23–28.
Purification, *Crystallization* and Preliminary Crystallographic Study of Neuraminidase from *Vibrio cholerae* and *Salmonella typhimurium* LT2, **226**, 1287–1290.

ine
GMC Oxidoreductases. A Newly Defined Family of Homologous Proteins with Diverse Catalytic Activities, **223**, 811–814.

ɔmatin
Nucleosome Arrays Inhibit Both Initiation and Elongation of Transcripts by Bacteriophage T7 RNA Polymerase, **223**, 67–78.
Site-directed Mutagenesis Studies on the Binding of the Globular Domain of Linker Histone H5 to the Nucleosome, **223**, 651–659.
Comparison of *X-ray Structures* of the Nucleosome Core Particle in Two Different Hydration States, **224**, 253–264.
Chromatin Reconstitution on Small DNA Rings. IV. DNA Supercoiling and Nucleosome Sequence Preference, **224**, 981–1001.
Promoter Sequence Containing $(CT)_n \cdot (GA)_n$ Repeats is Critical for the Formation of the DNase I Hypersensitive Sites in the *Drosophila hsp26* Gene, **225**, 985–998.
Co-operative Binding of the Globular Domain of Histone H5 to DNA, **225**, 1105–1121.
Chromatin Structure of *Schizosaccharomyces pombe*. A Nucleosome Repeat Length that is Shorter than the Chromatosomal DNA Length, **226**, 1009–1025.
Chromatin Reconstitution on Small DNA Rings. V. DNA Thermal Flexibility of Single Nucleosomes, **228**, 327–337.
Nucleosome Core Binding Region of Chromosomal Protein HMG-17 Acts as an Independent Functional Domain, **228**, 442–449.

Chromophyte alga
Chloroplast ATPase Genes in the Diatom *Odontella sinensis* Reflect Cyanobacterial Characters in Structure and Arrangement, **224**, 529–536.

Chromosome
Identification of Cryptic *lox* Sites in the Yeast Genome by Selection for Cre-mediated Chromosome Translocations that Confer Multiple Drug Resistance, **223**, 911–928.
Molecular Analysis of *Saccharomyces cerevisiae* Chromosome I. On the Number of Genes and the Identification of Essential Genes Using Temperature-sensitive-lethal Mutations, **225**, 53–65.
Telomere End-replication Problem and Cell Aging, **225**, 951–960.

Chromosome macronuclear
A High Degree of Macronuclear Chromosome Polymorphism is Generated by Variable DNA Rearrangements in *Paramecium primaurelia* during Macronuclear Dif ferentiation, **225**, 661–678.

Circular dichroism spectroscopy
Metal Ion-induced Conformational Changes of Phosphorylated Fragments of Human Neurofilament (NF-M) Protein, **223**, 673–682.
Secretion of T Cell Receptor Fragments From Recombinant *Escherichia coli* Cells, **224**, 885–890.
Nuclear Magnetic Resonance and Circular Dichroism Studies of a Triple-helical Peptide with a Glycine Substitution, **225**, 1–4.
Solution Conformations and Aggregational Properties of Synthetic Amyloid β-Peptides of Alzheimer's Disease. Analysis of Circular Dichroism Spectra, **225**, 1075–1093.
Structure of an Isolated Gramicidin A Double Helical Species by High-resolution Nuclear Magnetic Reson ance, **226**, 1101–1109.

***cis*⇌*trans* isomerase**
Similarities and Differences between Human Cyclophilin A and Other β-Barrel Structures. Structural Refinement at 1·63 Å Resolution, **228**, 539–550.

Cladonia chlorophaea
Numerous Group I Introns with Variable Distributions in the Ribosomal DNA of a Lichen Fungus, **228**, 315–321.

Clavulanate
Inhibition of β-Lactamase by Clavulanate. Trapped Intermediates in Cryocrystallographic Studies, **224**, 1103–1113.

Co operativity
cAMP–CRP Activator Complex and the CytR Repressor Protein Bind Co-operatively to the *cytRP* Promoter in *Escherichia coli* and CytR Antagonizes the cAMP–CRP-induced DNA bend, **227**, 396–406.

Coaggregates
Early Stages in RecA Protein-catalyzed Pairing. Analysis of Coaggregate Formation and Non-homologous DNA Contacts, **228**, 409–420.

Cobalamin
Crystallization and Preliminary X-ray Diffraction Studies of the Cobalamin-binding Domain of Methionine Synthase from *Escherichia coli*, **225**, 557–560.

Cobalt
Crystal Structure Solution and Refinement of the Semisynthetic Cobalt-substituted Bovine Erythrocyte Superoxide Dismutase at 2·0 Å Resolution, **226**, 227–238.
Structure of Cobalt Carbonic Anhydrase Complexed with Bicarbonate, **228**, 1212–1218.

Coenzyme A
Crystallization and Preliminary X-ray Diffraction Studies of Mitochondrial Short-chain Δ^3,Δ^2-Enoyl-CoA Isomerase from Rat Liver, **224**, 273–275.

Colicin
Refined Structure of the Pore-forming Domain of Colicin A at 2·4 Å Resolution, **224**, 639–657.

Collagen
Refined Solution Structure and Ligand-binding Properties of PDC-109 Domain b. A Collagen-binding Type II Domain, **223**, 281–298.
Liquid Crystallinity in Condensed Type I Collagen Solutions. A Clue to the Packing of Collagen in Extracellular Matrices, **224**, 861–873.
Nuclear Magnetic Resonance and Circular Dichroism Studies of a Triple-helical Peptide with a Glycine Substitution, **225**, 1–4.
Unique Side-chain Conformation Encoding for Chirality and Azimuthal Orientation in the Molecular Packing of Skin Collagen, **228**, 963–969.

Complement
Gene Structure of Human CD59 and Demonstration that Discrete mRNAs are Generated by Alternative Polyadenylation, **227**, 971–976.

Complex I
Characterization of Assembly Intermediates of NADH : Ubiquinone Oxidoreductase (Complex I) Accumulated in *Neurospora* Mitochondria by Gene Disruption, **227**, 1032–1042.

Congo Red
Binding of the Dye Congo Red to the Amyloid Protein Pig Insulin Reveals a Novel Homology amongst Amyloid-forming Peptide Sequences, **227**, 1205–1223.

Conjugation
Characterization of the F Plasmid Mating Aggregation Gene *traN* and of a New F Transfer Region Locus *trbE*, **225**, 299–311.
Mutational Substitution of Residues Implicated by *Crystal Structure* in Binding the Substrate Glutathione to Human Glutathione S-transferase π, **226**, 319–322.

Cooperativity
Use of Binding Site Neighbor-effect Parameters to Evaluate the Interactions between Adjacent Ligands on a Linear Lattice. Effects on Ligand–Lattice Association, **223**, 1063–1087.
Co-operative Binding of the Globular Domain of Histone H5 to DNA, **225**, 1105–1121.
Arginine Regulon of *Escherichia coli* K-12. A Study of Repressor–Operator Interactions and of *in Vitro* Binding Affinities *versus in Vivo* Repression, **226**, 367–386.
Morphological Pathway of Flagellar *ssembly* in *Salmonella typhimurium*, **226**, 433–446.
Molecular Basis of Co-operativity in Protein Folding. III. Structural Identification of Cooperative Folding Units and Folding Intermediates, **227**, 293–306.
cAMP–CRP Activator Complex and the CytR Repressor Protein Bind Co-operatively to the *cytRP* Promoter in *Escherichia coli* and CytR Antagonizes the cAMP–CRP-induced DNA bend, **227**, 396–406.

Copper
Crystal Structure of Yeast Cu,Zn Superoxide Dismutase. *Crystallographic* Refinement at 2·5 Å Resolution, **225**, 791–809.
Crystal Structure Solution and Refinement of the Semisynthetic Cobalt-substituted Bovine Erythrocyte Superoxide Dismutase at 2·0 Å Resolution, **226**, 227–238.

Copper-binding protein
Crystallization and Preliminary X-ray Crystallogra… Studies of Rusticyanin from *Thiobacillus ferrooxid…* **227**, 581–582.

cos
Genetic Analysis of *cosB*, the Binding Site for Termin… the DNA Packaging Enzyme of Bacteriophage λ, … 58–71.
Genetic Analysis of Mutations Affecting Terminase, … Bacteriophage λ DNA Packaging Enzyme, that S… press Mutations in *cosB*, the Terminase Binding S… **228**, 72–87.

Coxsackieviruses
Crystallization and Preliminary X-ray Diffraction Stu… of Coxsackievirus B1, **223**, 1171–1175.

Cre
Identification of Cryptic *lox* Sites in the Yeast Genom… Selection for Cre-mediated Chromosome Tr… locations that Confer Multiple Drug Resistance, … 911–928.
The Fine Structure of Two DNA Dodecamers Contai… the cAMP Responsive Element Sequence and … Inverse. Nuclear Magnetic Resonance and Molec… Simulation Studies, **227**, 852–875.

Crossbridges
Insect Crossbridges, Relaxed by Spin-labeled Nucleo… Show Well-ordered 90° State by X-ray Diffraction … Electron Microscopy, but Spectra of Electron P… magnetic Resonance Probes Report Disorder, … 678–697.

CRP-protein
cAMP–CRP Activator Complex and the CytR Repre… Protein Bind Co-operatively to the *cytRP* Promot… *Escherichia coli* and CytR Antagonizes the cA… CRP-induced DNA bend, **227**, 396–406.

Crustacyanin
Crystallization and Initial X-ray Analysis of … C_2-subunit of Crustacyanin, **224**, 283–284.

Crystal structure
Crystallization and Preliminary X-ray Investigatio… Proteinase A, a Non-pepsin-type Acid Proteinase … *Aspergillus niger* var. *macrosporus*, **223**, 373–375.
Crystallization and Preliminary Crystallographic Dat… *Escherichia coli* TEM1 β-Lactamase, **223**, 377–380…
Crystal Structure of the Alkaline Protei… Savinase™ from *Bacillus lentus* at 1·4 Å Resolu… **223**, 427–445.
Crystallization and Preliminary X-ray Analysis of C… plexes of Peptide Inhibitors with Human Reco… nant and Mouse Submandibular Renins, **223**, 447–…
Three-dimensional Structure of the Bifunctional Enz… Phosphoribosylanthranilate Isomerase : Indolegl… olphosphate Synthase from *Escherichia coli* Refine… 2·0 Å Resolution, **223**, 477–507.
Crystal Structure of the Complex between Carboxyp… dase A and the Biproduct Analog Inhibitor L-Ben… succinate at 2·0 Å Resolution, **223**, 573–578.
Two Crystal Forms of the Lentil Lectin Diffract to … Resolution, **223**, 579–581.
Proline *Cis–Trans* Isomers in Calbindin D_{9k} Observe… X-ray Crystallography, **223**, 601–606.
Crystal and Molecular *Structure* of Human Annex… after Refinement. Implications for Structure, M… brane Binding and Ion Channel Formation of… Annexin Family of Proteins, **223**, 683–704.
Refined Structure of Elongation Factor EF-Tu fr… *Escherichia coli*, **223**, 721–742.
Three-dimensional *Structure* of a Mutant Ribonuclease… (Y45W) Complexed with Non-cognizable Ribonu… tide, 2′AMP, and Its Comparison with a Specific C… plex with 2′GMP, **223**, 1013–1028.
Structural Details of Ribonuclease H from *Escherichi…* as Refined to an Atomic Resolution, **223**, 1029–1…
Crystallization and Preliminary X-ray Diffraction St… of Coxsackievirus B1, **223**, 1171–1175.

Crystallization and Preliminary X-ray Investigation of a Ubiquitin Carrier Protein (E2) from *Arabidopsis thaliana*, **223**, 1183–1186.
X-ray Diffraction Studies on Oriented Gels of Vertebrate Smooth Muscle Thin Filaments, **224**, 65–76.
Structure Determination and Refinement of Bovine Lens Leucine Aminopeptidase and its Complex with Bestatin, **224**, 113–140.
Three-dimensional Structure of Porcine Pancreatic Procarboxypeptidase A. A Comparison of the A and B Zymogens and their Determinants for Inhibition and Activation, **224**, 141–157.
Structure of the Complex Between Adenylate Kinase from *Escherichia coli* and the Inhibitor Ap A Refined at 1·9 Å Resolution. A Model for a Catalytic Transition State., **224**, 159–177.
Conformational Interconversion in Protein Crystals, **224**, 207–215.
Comparison of *X-ray Structures* of the Nucleosome Core Particle in Two Different Hydration States, **224**, 253–264.
Crystallization and Preliminary X-ray Investigation of *Escherichia coli* Porphobilinogen Deaminase, **224**, 269–271.
Crystallization and Preliminary Crystallographic Studies of the FAD Domain of Corn NADH:Nitrate Reductase, **224**, 277–279.
Crystallization and Initial X-ray Analysis of the C_2-subunit of Crustacyanin, **224**, 283–284.
Haemoglobin of the Antarctic Fish *Pagothenia bernacchii*. Amino Acid Sequence, Oxygen Equilibria and Crystal Structure of its Carbonmonoxy Derivative, **224**, 449–460.
Crystallization and Preliminary Crystallographic Data of Purple Acid Phosphatase from Red Kidney Bean, **224**, 511–513.
Refined Structure of the Pore-forming Domain of Colicin A at 2·4 Å Resolution, **224**, 639–657.
Crystal Structure of α-Dendrotoxin from the Green Mamba Venom and its Comparison with the Structure of Bovine Pancreatic Trypsin Inhibitor, **224**, 671–683.
His92Ala Mutation in Ribonuclease T_1 Induces Segmental Flexibility. *An X-ray Study*, **224**, 701–713.
Three-dimensional Structure of Recombinant Human Granulocyte-macrophage colony-stimulating Factor, **224**, 1075–1085.
Inhibition of β-Lactamase by Clavulanate. Trapped Intermediates in Cryocrystallographic Studies, **224**, 1103–1113.
Refined Structure of the Complex between Guanylate Kinase and its Substrate GMP at 2·0 Å Resolution, **224**, 1127–1141.
Design and Structural Analysis of Alternative Hydrophobic Core Packing Arrangements in Bacteriophage T4 Lysozyme, **224**, 1143–1159.
X-ray Diffraction by Crystals of Beef Heart Ubiquinol:Cytochrome *c* Oxidoreductase, **224**, 1161–1166.
Crystallization and Preliminary X-ray Analysis of Pig Kidney DOPA Decarboxylase, **224**, 1167–1170.
Crystallization and Oligomeric Structure of Rat Liver Arginase, **224**, 1175–1177.
Cubic Phases of Lipid-containing Systems. The Structure of Phase Q^{223} (Space Group *Pm*3n). An X-ray Scattering Study, **225**, 137–145.
Isoform Purification of Gastric Lipases. Towards Crystallization, **225**, 147–153.
1·7 Å X-ray Structure of the Periplasmic Ribose Receptor from *Escherichia coli*, **225**, 155–175.
Crystallization of the Exo(1,3)-β-Glucanase from *Candida albicans*, **225**, 217–218.
Structure of a *B*-DNA Decamer with a Central T-A Step: C-G-A-T-T-A-A-T-C-G, **225**, 379–395.
Three-dimensional *Structures* of Bulge-containing DNA Fragments, **225**, 397–431.
Crystal Structure of the 2:1 Complex Between d(GAAGCTTC) and the Anticancer Drug Actinomycin D, **225**, 445–456.
X-ray Structure Refinement and Comparison of Three Forms of Mitochondrial Aspartate Aminotransferase, **225**, 495–517.
The RNase T_1 Mutant Glu46Gln Binds the Inhibitors 2′GMP and 2′AMP at the 3′ Subsite, **225**, 533–542.
Crystal Structures of Phosphate, Iodide and Iodate-inhibited Phospholipase C from *Bacillus cereus* and Structural Investigations of the Binding of Reaction Products and a Substrate Analogue, **225**, 543–549.
Crystallization and Preliminary X-ray Diffraction Studies of the Cobalamin-binding Domain of Methionine Synthase from *Escherichia coli*, **225**, 557–560.
Preliminary Crystallographic Data for Stearoyl-acyl Carrier Protein Desaturase from Castor Seed, **225**, 561–564.
Crystallization of an Endochitinase from *Hordeum vulgare* L. Seeds, **225**, 565–567.
Crystal Structure of Oxidized Flavodoxin from a Red Alga *Chondrus crispus* Refined at 1·8 Å Resolution. Description of the Flavin Mononucleotide Binding Site, **225**, 775–789.
X-ray Solution Scattering Reveals Conformational Changes upon Iron Uptake in Lactoferrin, Serum and Ovo-transferrins, **225**, 811–819.
Preliminary Crystallographic Analysis of Murine Macrophage Inflammatory Protein 2, **225**, 913–915.
Purification and Crystallization of Glycogen Phosphorylase from *Saccharomyces cerevisiae*, **225**, 1027–1034.
Three-dimensional Structure of a Recombinant Variant of Human Pancreatic Secretory Trypsin Inhibitor (Kazal Type), **225**, 1095–1103.
Crystallization and Preliminary X-ray Studies of the Liganded Lysine, Arginine, Ornithine-binding Protein from *Salmonella typhimurium*, **225**, 1123–1125.
Preliminary X-ray *Crystallographic* Analysis of Intercellular Adhesion Molecule-1, **225**, 1127–1130.
Crystallization and Preliminary Crystallographic Study of Neuraminidase from *Micromonospora viridifaciens*, **225**, 1135–1136.
Initiating a Crystallographic Study of a Class II Fructose-1,6-bisphosphate Aldolase, **225**, 1137–1141.
Crystallization, Activity Assay and Preliminary X-ray Diffraction Analysis of the Uncleaved Form of the Serpin Antichymotrypsin, **226**, +273–276.
X-ray *Crystal Structure* of Canine Myeloperoxidase at 3 Å Resolution, **226**, 185–207.
Crystal Structure of the Factor for Inversion Stimulation FIS, at 2·0 Å Resolution, **226**, 209–226.
Crystal Structure Solution and Refinement of the Semisynthetic Cobalt-substituted Bovine Erythrocyte Superoxide Dismutase at 2·0 Å Resolution, **226**, 227–238.
Crystallization and Preliminary X-ray Study of Minor Glucoamylase from *Aspergillus awamori* Variant X-100/D27, **226**, 271–272.
Crystal Structure of a Berenil–d(CGCAAATTTGCG) Complex. An Example of Drug–DNA Recognition Based on Sequence-dependent Structural Features, **226**, 481–490.
Purification and Crystallization of Human Cathepsin D, **226**, 555–557.
Crystallization of κ-Bungarotoxin: Preliminary X-ray Data Obtained from the Venom-derived Protein, **226**, 559–562.
Crystallographic Data for the 9000 Dalton Wheat Non-specific Phospholipid Transfer Protein, **226**, 563–564.
Structure–Function Relationships in the Low-affinity Mutant Haemoglobin Aalborg (Gly74 (E18)β→Arg), **226**, 883–888.
Crystallization of Recombinant Chitinase from the Cloned *chi*A Gene of *Serratia marcescens*, **226**, 897–898.
Crystallization of the Complex of Actin with Gelsolin Segment 1, **226**, 899–901.
Refined 2·5 Å Structure of Murine Adenosine Deaminase at pH 6·0, **226**, 917–921.

Protein–Ligand Energetics Assessed Using Deoxy and Fluorodeoxy Sugars in Equilibrium Binding and High Resolution *Crystallographic Studies*, **226**, 923–929.

Refined 2·3 Å X-ray Crystal Structure of Bovine Thrombin Complexes Formed with the Benzamidine and Arginine-based Thrombin Inhibitors NAPAP, 4-TAPAP and MQPA. A Starting Point for Improving Antithrombotics, **226**, 1085–1099.

Molecular Structure of the *B*-DNA Dodecamer $d(CGCAAATTTGCG)_2$. An Examination of Propeller Twist and Minor-groove Water *Structure* at 2·2 Å Resolution, **226**, 1161–1173.

Crystal Structure of Cleaved Equine Leucocyte Elastase Inhibitor Determined at 1·95 Å Resolution, **226**, 1207–1218.

The *X-ray Structure* of the DNase I-d $(GGTATACC)_2$ Complex at 2·3 Å Resolution, **226**, 1237–1256.

Crystallization and Preliminary Crystallographic Characterization of GTP Cyclohydrolase I from *Escherichia coli*, **226**, 1279–1281.

Refined Crystal Structure of the Influenza Virus N9 Neuraminidase–NC41 Fab Complex, **227**, 122–148.

Structure Determination and Analysis of Yeast Iso-2-cytochrome *c* and a Composite Mutant Protein, **227**, 160–176.

Refined 1·8 Å Crystal Structure of the λ Repressor–Operator Complex, **227**, 177–196.

Three-dimensional Structure of Class π Glutathione S-Transferase from Human Placenta in Complex with S-Hexylglutathione at 2·8 Å Resolution, **227**, 214–226.

Structure of Scorpion Toxin Variant-3 at 1·2 Å Resolution, **227**, 239–252.

Active Site of Trypanothione Reductase. A Target for Rational Drug Design, **227**, 322–333.

X-ray Diffraction Study of Di and Tetra-ligated T-state Hemoglobin from High Salt Crystals, **227**, 480–492.

Preliminary Crystallographic Analyses of the N-Terminal Lobe of Recombinant Human Serum Transferrin, **227**, 575–576.

Crystallization and Preliminary X-ray Study of the Cathepsin B Complexed with CA074, a Selective Inhibitor, **227**, 942–944.

Binding of the Dye Congo Red to the Amyloid Protein Pig Insulin Reveals a Novel Homology amongst Amyloid-forming Peptide Sequences, **227**, 1205–1223.

X-ray Structure Determination and Comparison of Two Crystal Forms of a Variant (Asn115Arg) of the Alkaline Protease from *Bacillus alcalophilus* Refined at 1·85 Å Resolution, **228**, 108–117.

Three-dimensional Structure of an Fv from a Human IgM Immunoglobulin, **228**, 188–207.

Crystal Packing in Six Crystal Forms of Pancreatic Ribonuclease, **228**, 243–251.

Similarities and Differences between Human Cyclophilin A and Other β-Barrel Structures. Structural Refinement at 1·63 Å Resolution, **228**, 539–550.

The Crystal Structure of the *Bacillus lentus* Alkaline Protease, Subtilisin BL, at 1·4 Å Resolution, **228**, 580–595.

Crystal Structure of a Sweet Tasting Protein Thaumatin I, at 1·65 Å Resolution, **228**, 893–908.

Isolation, Crystallization, Crystal Structure Analysis and Refinement of B-Phycoerythrin from the Red Alga *Porphyridium sordidum* at 2·2 Å Resolution, **228**, 935–950.

Structure of Cobalt Carbonic Anhydrase Complexed with Bicarbonate, **228**, 1212–1218.

Crystallization

Crystallization and Preliminary X-ray Investigation of Proteinase A, a Non-pepsin-type Acid Proteinase from *Aspergillus niger* var. *macrosporus*, **223**, 373–375.

Crystallization and Preliminary Crystallographic Data on *Escherichia coli* TEM1 β-Lactamase, **223**, 377–380.

Crystallization of the Fab Fragments of Anti-peptide Monoclonal Antibodies and a Complex with Peptide, **223**, 381–382.

Crystallization and Preliminary X-ray Analysis of C
plexes of Peptide Inhibitors with Human Reco
nant and Mouse Submandibular Renins, **223**, 447–

Two Crystal Forms of the Lentil Lectin Diffract to E
Resolution, **223**, 579–581.

Crystallization and Preliminary X-ray Diffraction Stu
of a Deglycosylated Glucose Oxidase from *Penicill
amagasakiense*, **223**, 1167–1169.

Crystallization and Preliminary X-ray Diffraction Stu
of Coxsackievirus B1, **223**, 1171–1175.

Crystallization of β-Galactosidase from *Escherichia*
223, 1177–1182.

Crystallization and Preliminary X-ray Investigation
Ubiquitin Carrier Protein (E2) from *Arabidopsis
liana*, **223**, 1183–1186.

Crystallization and Preliminary X-ray Investigatio
Escherichia coli Porphobilinogen Deaminase, 22
269–271.

Crystallization and Preliminary X-ray Diffraction Stu
of Mitochondrial Short-chain Δ^3,Δ^2-Enoyl-CoA
merase from Rat Liver, **224**, 273–275.

Crystallization and Preliminary Crystallographic Stu
of the FAD Domain of Corn NADH:Nitrate Re
tase, **224**, 277–279.

Crystallization and Preliminary X-ray Study of a Li
from *Pseudomonas glumae*, **224**, 281–282.

Crystallization and Initial X-ray Analysis of
C_2-subunit of Crustacyanin, **224**, 283–284.

Crystallization and Preliminary Crystallographic Dat
Purple Acid Phosphatase from Red Kidney Bean,
511–513.

Crystallization and Preliminary X-ray Diffraction Stu
of a Protective Cloned 28 kDa Glutathione S-tran
ase from *Schistosoma mansoni*, **224**, 515–518.

Crystallization of the Seryl-tRNA Synthetase–tRNA
Complex from *Thermus thermophilus*, **224**, 519–52

Crystallization of the B800–820 Light-harvesting Com
from *Rhodopseudomonas acidophila*, Strain 7750,
527–528.

Contribution of Hydration and Non-covalent Interact
to the Heat Capacity Effect on Protein Unfolding,
715–723.

Crystallization and Preliminary X-ray Analysis of
Kidney DOPA Decarboxylase, **224**, 1167–1170.

Crystallization of Aspartyl-tR
Synthetase-$tRNA^{Asp}$ Complex from *Escherichia c
and First Crystallographic Results, **224**, 1171–117

Purification and Crystallization of *Lactobacillus ca
Folylpolyglutamate Synthetase Expressed in *Esch
chia coli*, **224**, 1179–1180.

Effect of Additives on the Crystallization of Glutam
Dehydrogenase from *Clostridium symbiosum*. Evide
for a Ligand-induced Conformational Change, 22
1181–1184.

Isoform Purification of Gastric Lipases. Towards Crys
lization, **225**, 147–153.

Pre-nucleation *Crystallization* Studies on Aminoa
tRNA Synthetases by Dynamic Light-scattering,
185–191.

Crystallization of the Exo(1,3)-β-Glucanase from *Canc
albicans*, **225**, 217–218.

Crystallization and Preliminary X-ray Diffraction Stu
of the Cobalamin-binding Domain of Methionine S
thase from *Escherichia coli*, **225**, 557–560.

Preliminary Crystallographic Data for Stearoyl-acyl C
rier Protein Desaturase from Castor Seed, 22
561–564.

Crystallization of an Endochitinase from *Hordeum vulg
L. Seeds, **225**, 565–567.

Crystallization and Preliminary Diffraction Studies
Hydroxypyruvate Reductase (D-Glycerate Dehyc
genase) from *Hyphomicrobium methylovorum*, 22
909–911.

Preliminary Crystallographic Analysis of Murine Macrophage Inflammatory Protein 2, **225**, 913–915.
Electron Microscopy of Decorated *Crystals* for the Determination of Crystallographic Rotation and Translation Parameters in Large Protein Complexes, **225**, 1065–1073.
Preliminary X-ray *Crystallographic* Analysis of Intercellular Adhesion Molecule-1, **225**, 1127–1130.
Crystallization and Preliminary X-ray Studies on the Corepressor Binding Domain of the *Escherichia coli* Purine Repressor, **225**, 1131–1133.
Initiating a Crystallographic Study of a Class II Fructose-1,6-bisphosphate Aldolase, **225**, 1137–1141.
Crystallization and Preliminary X-ray Study of Minor Glucoamylase from *Aspergillus awamori* Variant X-100/D27, **226**, 271–272.
Crystallization and Preliminary X-ray Crystallographic Analysis of *Mirabilis* Antiviral Protein, **226**, 281–283.
Crystallographic Data for the 9000 Dalton Wheat Non-specific Phospholipid Transfer Protein, **226**, 563–564.
Crystallization of the NAD-dependent Malic Enzyme from the Parasitic Nematode *Ascaris suum*, **226**, 565–569.
Crystallization of Recombinant Chitinase from the Cloned *chi*A Gene of *Serratia marcescens*, **226**, 897–898.
Crystallization of the Complex of Actin with Gelsolin Segment 1, **226**, 899–901.
Crystallization and Preliminary Crystallographic Characterization of GTP Cyclohydrolase I from *Escherichia coli*, **226**, 1279–1281.
Crystallization and Preliminary Crystallographic Studies of Glucosamine-6-phosphate Deaminase from *Escherichia coli* K12, **226**, 1283–1286.
Crystallization and Preliminary X-ray Diffraction Studies of Aspartic Proteinase from *Irpex lacteus*, **226**, 1291–1293.
Human Liver Cathepsin D. Purification, Crystallization and Preliminary X-ray Diffraction Analysis of a Lysosomal Enzyme, **227**, 265–270.
Crystallization and Crystallographic Characterization of the Iron–Sulfur containing DNA-repair Enzyme Endonuclease III from *Escherichia coli*, **227**, 347–351.
Crystallization of a Type I 3-Dehydroquinase from *Salmonella typhi*, **227**, 352–355.
Crystallization and Preliminary Crystallographic Data of a *Streptomyces scabies* Extracellular Esterase, **227**, 569–571.
Expression, Purification and Crystallization of the *Vibrio harveyi* Acyltransferase, **227**, 572–574.
Crystallization of Human β-Hexosaminidase B, **227**, 577–580.
Crystallization and Preliminary X-ray Crystallographic Studies of Rusticyanin from *Thiobacillus ferrooxidans*, **227**, 581–582.
Crystallization and Preliminary X-ray Analysis of the Methane Monooxygenase Hydroxylase Protein from *Methylococcus capsulatus* (Bath), **227**, 583–585.
Crystallization and Preliminary X-ray Diffraction Study of *Lathyrus ochrus* Isolectin II Complexed to the Human Lactotransferrin N2 Fragment, **227**, 938–941.
Crystallization and Preliminary X-ray Study of the Cathepsin B Complexed with CA074, a Selective Inhibitor, **227**, 942–944.
Crystallization and X-ray Examination of Bovine Adrenodoxin, **227**, 945–947.
Crystallization and Preliminary X-ray Analysis of the Complex between a Mouse Fab Fragment and a Single IgG-Binding Domain from Streptococcal Protein G, **227**, 1253–1254.
Crystallization and Preliminary X-ray Investigation of Bovine Liver Mitochondrial Aldehyde Dehydrogenase, **227**, 1255–1257.
Crystallization and Preliminary X-ray Crystallographic Analysis of Lipase from *Pseudomonas cepacia*, **227**, 1258–1262.
Purification, Crystallization and Preliminary X-ray Analysis of the 3-phosphoglycerate Kinase from *Bacillus stearothermophilus*, **227**, 1263–1264.
Crystallization and Initial Crystallographic Results for Pepstatin A Inhibited Bovine Cathepsin D, **227**, 1265–1268.
Crystallization and Preliminary X-ray Investigation of Phosphoribosylaminoimidazolesuccinocarboxamide Synthase from the Yeast *Saccharomyces cerevisiae*, **228**, 298–299.
Crystallization and Preliminary Crystallographic Analysis of Aspartate-β-semialdehyde Dehydrogenase from *Escherichia coli*, **228**, 300–301.
Crystallization and Preliminary Crystallographic Investigation of Methanol Dehydrogenase from *Methylobacterium extorquens* AM1, **228**, 302–305.
The Expression, Purification and Crystallization of the ε Subunit of the F_1 Portion of the ATPase of *Escherichia coli*, **228**, 306–309.
Crystallization of the A-Domain of the Mannitol Transport Protein Enzyme II^{mtl}, **228**, 310–312.
Preliminary Crystallographic Study of Bluetongue Virus Capsid Protein, VP7, **228**, 687–689.
Crystallization and Preliminary X-ray Diffraction Studies of a Peroxidase from Barley Grain, **228**, 690–692.
Crystallization and Preliminary X-ray Diffraction Analysis of the Catalytic Domain of Cex, an Exo-β-1,4-glucanase and β-1,4-xylanase from the Bacterium *Cellulomonas fimi*, **228**, 693–695.
Crystallization of Recombinant Chitobiase from *Serratia marcescens*, **228**, 696–697.
Crystallization and Preliminary X-ray Analysis of a Fungal Endoglucanase I, **228**, 970–972.
Preliminary Crystallographic Studies of the Amino Terminal Half of Human Lactoferrin in Its Iron-saturated and Iron-free forms, **228**, 973–974.
Purification, Crystallization and Preliminary X-ray Analysis of Toxic Shock Syndrome Toxin-1 from *Staphylococcus aureus*, **228**, 983–986.
Single Crystals of Bovine Heart Cytochrome *c* Oxidase at Fully Oxidized Resting, Fully Reduced and CO-bound Fully Reduced States Are Isomorphous with Each Other, **228**, 987–990.
Crystallization and Preliminary X-ray Diffraction Studies of Pancreatic Spasmolytic Polypeptide, **228**, 991–994.
Crystallization and Preliminary Crystallographic Study of an Octa-heme Cytochrome c_3 from *Desulfovibrio desulfuricans* Norway, **228**, 995–997.
Crystallization and Preliminary X-ray Studies of the Pectate Lyase from *Bacillus subtilis*, **228**, 1255–1258.
Purification and Crystallization of the Light Harvesting LH1 Complex from *Rhodobacter sphaeroides*, **228**, 1259–1262.
Crystallization and Preliminary X-ray Analysis of Three Serotypes of Foot-and-Mouth Disease Virus, **228**, 1263–1268.
Crystallization and Preliminary X-ray Analysis of Human Angiogenin, **228**, 1269–1270.
Crystallization and Preliminary X-ray Diffraction Analysis of a Plant Ribonuclease from the Seeds of the Bitter Gourd *Momordica charantia*, **228**, 1271–1273.

Crystallization additives

Crystallization of Murine Major Histocompatibility Complex Class I H-2K^b Single Peptides, **228**, 975–982.

Crystallography

Crystal Structure of Yeast Cu,Zn Superoxide Dismutase. *Crystallographic* Refinement at 2·5 Å Resolution, **225**, 791–809.
Crystal Structure of a Chimeric Fab′ Fragment′ of an Antibody Binding Tumour Cells, **227**, 253–264.
Crystal Structure of Glycinamide Ribonucleotide Transformylase from *Escherichia coli* at 3·0 Å Resolution. A Target Enzyme for Chemotherapy, **227**, 283–292.
Crystallization and Crystallographic Characterization of the Iron–Sulfur containing DNA-repair Enzyme Endonuclease III from *Escherichia coli*, **227**, 347–351.
Ribose and Glucose–Galactose Receptors. Competitors in Bacterial Chemotaxis, **227**, 418–440.
Structure of Tropomyosin at 9 Ångstroms Resolution, **227**, 441–452.

X-ray Diffraction Study of Di and Tetra-ligated T-state Hemoglobin from High Salt Crystals, **227**, 480–492.
Structure of Porin Refined at 1·8 Å Resolution, **227**, 493–509.
Crystallization of Human β-Hexosaminidase B, **227**, 577–580.
Crystallization and Preliminary X-ray Analysis of the Methane Monooxygenase Hydroxylase Protein from *Methylococcus capsulatus* (Bath), **227**, 583–585.
Insect Crossbridges, Relaxed by Spin-labeled Nucleotide, Show Well-ordered 90° State by X-ray Diffraction and Electron Microscopy, but Spectra of Electron Paramagnetic Resonance Probes Report Disorder, **227**, 678–697.
The Crystal Molecular Structure of the *Rhizomucor miehei* Triacylglyceride Lipase at 1·9 Å Resolution, **227**, 818–839.
X-ray Structure Determination of Telokin, the C-terminal Domain of Myosin Light Chain Kinase, at 2·8 Å Resolution, **227**, 840–851.
Preliminary Crystallographic Studies of Urease from Jack Bean and from *Klebsiella aerogenes*, **227**, 934–937.
Crystallization and Preliminary X-ray Study of the Cathepsin B Complexed with CA074, a Selective Inhibitor, **227**, 942–944.
Crystallization and X-ray Examination of Bovine Adrenodoxin, **227**, 945–947.
X-ray Analysis of Substrate Analogs in the Ricin A-chain Active Site, **227**, 1136–1145.
Structure of Native and Apo Carbonic Anhydrase II and Structure of some of Its Anion–Ligand Complexes, **227**, 1192–1204.
Crystallization and Preliminary X-ray Crystallographic Analysis of Lipase from *Pseudomonas cepacia*, **227**, 1258–1262.
Purification, Crystallization and Preliminary X-ray Analysis of the 3-phosphoglycerate Kinase from *Bacillus stearothermophilus*, **227**, 1263–1264.
Crystallization, Structure Determination and Least-squares Refinement to 1·75 Å Resolution of the Fatty-acid-binding Protein Isolated from *Manduca sexta* L., **228**, 208–219.
Crystallization and Preliminary X-ray Investigation of Phosphoribosylaminoimidazolesuccinocarboxamide Synthase from the Yeast *Saccharomyces cerevisiae*, **228**, 298–299.
The Expression, Purification and Crystallization of the ε Subunit of the F_1 Portion of the ATPase of *Escherichia coli*, **228**, 306–309.
High Resolution Crystal Structures and Comparisons of T-State Deoxyhaemoglobin and Two Liganded T-State Haemoglobins (α-oxy)Haemoglobin and (m T(met)Haemoglobin, **228**, 551–579.
Three-dimensional Structure of the High-potential Iron–Sulfur Protein Isolated from the Purple Phototrophic Bacterium *Rhodocyclus tenuis* Determined and Refined at 1·5 Å Resolution, **228**, 672–686.
Preliminary Crystallographic Study of Bluetongue Virus Capsid Protein, VP7, **228**, 687–689.
Crystallization and Preliminary X-ray Diffraction Studies of a Peroxidase from Barley Grain, **228**, 690–692.
Crystallization and Preliminary X-ray Diffraction Analysis of the Catalytic Domain of Cex, an Exo-β-1,4-glucanase and β-1,4-xylanase from the Bacterium *Cellulomonas fimi*, **228**, 693–695.
Crystallization and Preliminary X-ray Analysis of a Fungal Endoglucanase I, **228**, 970–972.
Crystallization of Murine Major Histocompatibility Complex Class I H-2K^b Single Peptides, **228**, 975–982.
Purification, Crystallization and Preliminary X-ray Analysis of Toxic Shock Syndrome Toxin-1 from *Staphylococcus aureus*, **228**, 983–986.
Single Crystals of Bovine Heart Cytochrome *c* Oxidase at Fully Oxidized Resting, Fully Reduced and CO-bound Fully Reduced States Are Isomorphous with Each Other, **228**, 987–990.
Crystallization and Preliminary X-ray Diffraction Stu of Pancreatic Spasmolytic Polypeptide, **228**, 991–9
Crystallization and Preliminary Crystallographic Stud an Octa-heme Cytochrome c_3 from *Desulfovibrio de furicans* Norway, **228**, 995–997.
Role of B13 Glu in Insulin Assembly. The Hexamer Str ture of Recombinant Mutant (B13 Glu→Gln) Insu **228**, 1163–1176.
Impact of Protein–Protein Contacts on the Conformat of Thrombin-bound Hirudin Studied by Compari with the Nuclear Magnetic Resonance Solution Str ture of Hirudin(1-51), **228**, 1206–1211.
Crystallization and Preliminary X-ray Studies of the I tate Lyase from *Bacillus subtilis*, **228**, 1255–1258.
Crystallization and Preliminary X-ray Analysis of Th Serotypes of Foot-and-Mouth Disease Virus, **22** 1263–1268.
Crystallization and Preliminary X-ray Analysis of Hur Angiogenin, **228**, 1269–1270.
Crystallization and Preliminary X-ray Diffraction Ana sis of a Plant Ribonuclease from the Seeds of the Bi Gourd *Momordica charantia*, **228**, 1271–1273.

Crystallography attice anisotropy
Use of Binding Site Neighbor-effect Parameters to Eva ate the Interactions between Adjacent Ligands o Linear Lattice. Effects on Ligand–Lattice Associat **223**, 1063–1087.

Crystallography *B*-factors
A 500 ps Molecular Dynamics Simulation Study of In leukin-1β in Water. Correlation with Nuclear Magn Resonance Spectroscopy and Crystallography, **22** 239–250.

Crystallography cryo
Inhibition of β-Lactamase by Clavulanate. Trapp Intermediates in Cryocrystallographic Studies, **2** 1103–1113.
Inhibition of β-Lactamase by Clavulanate. Trapped In mediates in Cryocrystallographic Studies, **22** 1103–1113.

Crystallography fiber diffraction
Helical Structure of P Pili from *Escherichia coli*. Evide from X-ray Fiber Diffraction and Scanning Tra mission Electron Microscopy, **228**, 735–742.

Crystallography ligand-Lattice Association
Use of Binding Site Neighbor-effect Parameters to Eva ate the Interactions between Adjacent Ligands o Linear Lattice. Effects on Ligand–Lattice Associati **223**, 1063–1087.

Crystallography molecular replacement
Crystal Structure of a Chimeric Fab′ Fragment′ of Antibody Binding Tumour Cells, **227**, 253–264.
Active Site of Trypanothione Reductase. A Target Rational Drug Design, **227**, 322–333.

Crystallography patterson search
Electron Microscopy of Decorated *Crystals* for the De mination of Crystallographic Rotation and Translat Parameters in Large Protein Complexes, **22** 1065–1073.

Crystallography phase determination
Cubic Phases of Lipid-containing Systems. The Struct of Phase Q^{223} (Space Group *P*m3n). An X-ray Scatt ing Study, **225**, 137–145.

Crystallography refinement
Refined *Crystal Structure* of Ascorbate Oxidase at 1· Resolution, **224**, 179–205.
Refinement of an Enzyme Complex with Inhibitor Bou at Partial Occupancy. Hen Egg-white Lysozyme a tri-*N*-acetylchitotriose at 1·75 Å Resolution, **22** 613–628.
Refined Structure of the Pore-forming Domain of Colicin at 2·4 Å Resolution, **224**, 639–657.
Refined Structure of the Complex between Guanyl Kinase and its Substrate GMP at 2·0 Å Resolutio **224**, 1127–1141.

Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. I. Theory and Test by Simulated Diffraction Data, **225**, 457–475.
Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. II. Application to Human Lysozyme, **225**, 477–486.
Structure of Scorpion Toxin Variant-3 at 1·2 Å Resolution, **227**, 239–252.
Structure of Oxidized Bacteriophage T4 Glutaredoxin (Thioredoxin). Refinement of Native and Mutant Proteins, **228**, 596–618.

tallography, ROE
Localization of Bound Water in the Solution Structure of the Immunoglobulin Binding Domain of Streptococcal Protein G. Evidence for Solvent-induced Helical Distortion in Solution, **223**, 853–856.

tallography Rotation function
Crystallization and Preliminary X-ray Analysis of Complexes of Peptide Inhibitors with Human Recombinant and Mouse Submandibular Renins, **223**, 447–453.
Binding of an Antiviral Agent to a Sensitive and a Resistant Human Rhinovirus. Computer Simulation Studies with Sampling of Amino Acid Side-chain Conformations. II. Calculation of Free-energy Differences by Thermodynamic Integration, **225**, 697–712.

tallography small angle scattering
Temperature Dependence of the Kinetics of the Urea-induced Dissociation of Human Plasma α_2-Macroglobulin into Half-molecules. A Minimum Rate at 15°C Indicates Hydrophobic Interaction between the Subunits, **225**, 551–556.

tallography space group
Crystallization and Preliminary Crystallographic Data of Purple Acid Phosphatase from Red Kidney Bean, **224**, 511–513.

tallography symmetry
Crystallization and Preliminary X-ray Analysis of Pig Kidney DOPA Decarboxylase, **224**, 1167–1170.

tallography synchrotron radius
Crystal Structure of the Alkaline Proteinase Savinase™ from *Bacillus lentus* at 1·4 Å Resolution, **223**, 427–445.

tals two-dimensional
Ubiquitous Soluble Mg^{2+}–ATPase Complex. A *Structural* Study, **223**, 557–571.
A 9 Å Two-dimensional Projected *Structure* of Cholera Toxin B-subunit–G_{M1} Complexes Determined by Electron *Crystallography*, **226**, 23–28.

binding protein
Similarities and Differences between Human Cyclophilin A and Other β-Barrel Structures. Structural Refinement at 1·63 Å Resolution, **228**, 539–550.

off artifacts
Taming Cut-off Induced Arifacts in Molecular Dynamics Studies of Solvated Polypeptides. The Reaction Field Method, **228**, 909–923.

'n superoxide dismutase
Evolutionary Conservativeness of Electric Field in the Cu,Zn Superoxide Dismutase Active Site. Evidence for Co-ordinated Mutation of Charged Amino Acid Residues, **223**, 337–342.

chrome
Oxidation State-dependent Conformational Changes in Cytochrome *c*, **223**, 959–976.
Thermodynamic Characterization of Cytochrome *c* at Low pH. Observation of the Molten Globule State and of the Cold Denaturation Process, **223**, 1139–1153.
Effect of the Asn-52→Ile Mutation on the Redox Potential of Yeast Cytochrome *c*. Theory and Experiment, **224**, 589–600.
X-ray Diffraction by Crystals of Beef Heart Ubiquinol:Cytochrome *c* Oxidoreductase, **224**, 1161–1166.
σ-Aminolevulinate Couples *cycA* Transcription To Changes in Heme Availability in *Rhodobacter sphaeroides*, **226**, 101–115.
Structure Determination and Analysis of Yeast Iso-2-cytochrome *c* and a Composite Mutant Protein, **227**, 160–176.
Single Crystals of Bovine Heart Cytochrome *c* Oxidase at Fully Oxidized Resting, Fully Reduced and CO-bound Fully Reduced States Are Isomorphous with Each Other, **228**, 987–990.

Cytochrome multiheme
Crystallization and Preliminary Crystallographic Study of an Octa-heme Cytochrome c_3 from *Desulfovibrio desulfuricans* Norway, **228**, 995–997.

Cytokine
Human Interleukin 4. The Solution *Structure* of a Four-helix Bundle Protein, **224**, 899–904.
Association of AUUUA-binding Protein with A + U-rich mRNA during Nucleo-cytoplasmic Transport, **226**, 721–733.

Deaminase
Crystallization and Preliminary Crystallographic Studies of Glucosamine-6-phosphate Deaminase from *Escherichia coli* K12, **226**, 1283–1286.

Defective interfering particles
Construction of a Microphage Variant of Filamentous Bacteriophage, **228**, 720–724.

3-dehydroquinase
Crystallization of a Type I 3-Dehydroquinase from *Salmonella typhi*, **227**, 352–355.

α-dendrotoxin
Crystal Structure of α-Dendrotoxin from the Green Mamba Venom and its Comparison with the Structure of Bovine Pancreatic Trypsin Inhibitor, **224**, 671–683.

Deoxyribonuclease I
The *X-ray Structure* of the DNase I-d $(GGTATACC)_2$ Complex at 2·3 Å Resolution, **226**, 1237–1256.

2-deoxystreptamine
Non-competitive Inhibition of Group I Intron RNA Self-splicing by Aminoglycoside Antibiotics, **226**, 935–941.

Detoxification
Three-dimensional Structure of Class π Glutathione S-Transferase from Human Placenta in Complex with S-Hexylglutathione at 2·8 Å Resolution, **227**, 214–226.

Diatom
Chloroplast ATPase Genes in the Diatom *Odontella sinensis* Reflect Cyanobacterial Characters in Structure and Arrangement, **224**, 529–536.

Diazepam binding inhibitor
Three-dimensional *Structure* in Solution of Acyl-coenzyme A Binding Protein from Bovine Liver, **226**, 1131–1141.
Acyl-CoA-binding Protein/Diazepam-binding Inhibitor Gene and Pseudogenes. A Typical Housekeeping Gene Family, **228**, 1011–1022.

Dihydrofolate
Nuclear Magnetic Resonance Detection of Bound Water Molecules in the Active Site of *Lactobacillus casei* Dihydrofolate Reductase in Aqueous Solution, **226**, 549–554.
Crystallization and Preliminary Crystallographic Characterization of GTP Cyclohydrolase I from *Escherichia coli*, **226**, 1279–1281.

Dinucleotide
Newly Observed Binding Mode in Pancreatic Ribonuclease, **224**, 265–267.

Dipyrromethane cofactor
Crystallization and Preliminary X-ray Investigation of *Escherichia coli* Porphobilinogen Deaminase, **224**, 269–271.

DNA
Localization and DNA Sequence of a Replication Origin in the Rhodopsin Gene Locus of Chinese Hamster Cells, **224**, 343–358.

Balbiani Ring 1 Gene in *Chironomus tentans*. Sequence Organization and Dynamics of a Coding Minisatellite, **225**, 349–361.
Proton *Nuclear Magnetic Resonance* Assignments and Structural Characterization of an Intramolecular DNA Triplex, **225**, 755–773.
Energetics of the Strand Separation Transition in Superhelical DNA, **225**, 835–847.
Unwinding of Heterologous DNA by RecA Protein during the Search for Homologous *Sequences*, **226**, 127–139.
Prediction of Gene Structure, **226**, 141–157.
Determination of Eukaryotic Protein Coding Regions Using *Neural Networks* and Information Theory, **226**, 471–479.
The *X-ray Structure* of the DNase I-d $(GGTATACC)_2$ Complex at 2·3 Å Resolution, **226**, 1237–1256.

***dna*A**
Genetic and Functional Analysis of the Basic Replicon of pPS10, a Plasmid Specific for *Pseudomonas* Isolated from *Pseudomonas syringae patovar savastanoi*, **223**, 415–426.
Cell-cycle Control of a Cloned Chromosomal Origin of Replication from *Caulobacter crescentus*, **226**, 959–977.
Novel *Escherichia coli* Mutant, *dnaR*, Thermosensitive in Initiation of Chromosome Replication, **226**, 979–987.

DNA Abasic sites
Mutagenicity of a Unique Apurinic/Apyrimidinic Site in Mammalian Cells, **227**, 981–984.

DNA Alternating Py-Pu
Solution Structure of $[d(GCGTATACGC)]_2$, **228**, 118–137.

DNA Alternating right-handed
Crystal and Molecular Structure of the *A*-DNA Dodecamer d(CCGTACGTACGG). Choice of Fragment Helical Axis, **227**, 738–756.

DNA backbone conformation
Base Pairing Geometry in GA Mismatches Depends Entirely on the Neighboring Sequence, **228**, 1037–1041.

DNA base sequence
Conformational Sub-states in *B*-DNA, **226**, 775–794.

DNA base sequence effects
The Fine Structure of Two DNA Dodecamers Containing the cAMP Responsive Element Sequence and Its Inverse. Nuclear Magnetic Resonance and Molecular Simulation Studies, **227**, 852–875.

DNA base stacking
DNA Curvature does not require Bifurcated Hydrogen Bonds or Pyrimidine Methyl Groups, **225**, 729–738.

DNA bending
Conformation of DNA Packaged in Bacteriophage T7. Analysis by use of Ultraviolet Light-induced DNA–Capsid Cross-linking, **223**, 999–1011.
Upstream Curved Sequences Influence the Initiation of *Transcription* at the *Escherichia coli* Galactose Operon, **224**, 293–306.
Repression of the *araBAD* Promoter from $araO_1$, **224**, 335–341.
DNA Topology-mediated Regulation of *Transcription* Initiation from the Tandem Promoters of the *ilvG-MEDA* Operon of *Escherichia coli*, **224**, 919–935.
DNA Curvature does not require Bifurcated Hydrogen Bonds or Pyrimidine Methyl Groups, **225**, 729–738.
Binding of the Arginine Repressor of *Escherichia coli* K12 to its Operator Sites, **226**, 387–397.
cAMP–CRP Activator Complex and the CytR Repressor Protein Bind Co-operatively to the *cytRP* Promoter in *Escherichia coli* and CytR Antagonizes the cAMP–CRP-induced DNA bend, **227**, 396–406.
Role of Integration Host Factor in Stimulating Transcription from the σ^{54}-dependent *nifH* Promoter, **227**, 602–620.
Crystal and Molecular Structure of the *A*-DNA Dodecamer d(CCGTACGTACGG). Choice of Fragment Helical Axis, **227**, 738–756.
Positive and Negative Effects of DNA Bending on Act tion of Transcription from a Distant Site, 996–1008.

DNA bent
An Accurate Method for Determining the Helical Re of DNA in Solution Reveals Differences to the Cry Structures of Two B-DNA Decamers, **228**, 322–32
In Vitro Evolution of Intrinsically Bent DNA, 803–812.
Zinc Induces a Bend Within the Transcription Fa IIIA-binding Region of the 5 S RNA Gene, 1115–1123.

DNA bifurcated hydrogen bonds
DNA Curvature does not require Bifurcated Hydr Bonds or Pyrimidine Methyl Groups, **225**, 729–73

DNA B_{II} phosphate conformation
Adjacent G : A Mismatches Stabilized by Cross-st Base-stacking and B_{II} Phosphate Groups, 138–155.

DNA binding protein
C-terminal Truncated *Escherichia coli* RecA Pr RecA5327 Has Enhanced Binding Affinities to Si and Double-stranded DNAs, **223**, 115–129.
Specificity of Origin Recognition by Replication Initi Protein in Plasmids of the pT181 Family is D mined by a Six Amino Acid Residue Element, 145–158.
Expectation Maximization Algorithm for Identifying tein-binding Sites with Variable Lengths Unaligned DNA Fragments, **223**, 159–170.
Dissociation of a Native Dimer to a Molten Glo Monomer. Effects of Pressure and Dilution on Association Equilibrium of Arc Repressor, 545–555.
Site-directed Mutagenesis Studies on the Binding o Globular Domain of Linker Histone H5 to the Nu some, **223**, 651–659.
Determination of the Nuclear Magnetic Resonance S tion Structure of the DNA-binding Domain (Resi 1 to 69) of the 434 Repressor and Comparison wit X-ray Crystal Structure, **223**, 743–767.
Specific Interaction of the First Three Zinc Finge TFIIIA with the Internal Control Region of the *X pus* 5 S RNA Gene, **223**, 857–871.
Upstream Curved Sequences Influence the Initiatio *Transcription* at the *Escherichia coli* Galactose Op **224**, 293–306.
Crystallization and Preliminary X-ray Studies on the repressor Binding Domain of the *Escherichia coli* ine Repressor, **225**, 1131–1133.
How Lac Repressor Finds *lac* Operator *in Vitro*, 59–68.
Crystal Structure of the Factor for Inversion Stimul FIS, at 2·0 Å Resolution, **226**, 209–226.
Arginine Regulon of *Escherichia coli* K-12. A Stud Repressor–Operator Interactions and of *in Vitro* ing Affinities *versus in Vivo* Repression, **226**, 367
Structure of RecA–DNA Complexes Studied by Com tion of Linear Dichroism and Small-angle Neu Scattering Measurements on Flow-oriented Sam **226**, 1175–1191.
Structure of DNA–RecA Complexes Studied by Res Differential Linear Dichroism and Fluores Spectroscopy for a Genetically Engineered RecA tein, **226**, 1193–1205.
Characterization of DNA-binding and Strand-exch Stimulation Properties of y-RPA, a Yeast Si strand-DNA-binding Protein, **227**, 54–71.
Limited Proteolysis Unmasks Specific DNA-binding c Murine RNA Polymerase I-specific Transcription mination Factor TTFI, **227**, 635–647.
Specific Interactions Between the IclR Repressor o Acetate Operon of *Escherichia coli* and its Oper **228**, 23–29.
Adjacent Zinc-finger Motifs in Multiple Zinc-finger tides from SWI5 Form Structurally Indepen Flexibly Linked Domains, **228**, 619–636.

Solution Structures of Two Zinc-finger Domains from SWI5 Obtained Using Two-dimensional ^{1}H Nuclear Magnetic Resonance Spectroscopy. A Zinc-finger Structure with a Third Strand of β-Sheet, **228**, 637–651.

λ binding protein single-stranded
Characterization of the Nucleic Acid-binding Activities of the Isolated Amino-terminal Head Domain of the Intermediate Filament Protein Vimentin Reveals its Close Relationship to the DNA-binding Regions of some Prokaryotic Single-stranded DNA-binding Proteins, **228**, 41–57.

λ binding proteins
Characterization of the Nucleic Acid-binding Activities of the Isolated Amino-terminal Head Domain of the Intermediate Filament Protein Vimentin Reveals its Close Relationship to the DNA-binding Regions of some Prokaryotic Single-stranded DNA-binding Proteins, **228**, 41–57.
Differential Binding of Wild-type and a Mutant RepA Protein to *oriR* Sequence Suggests a Model for the Initiation of Plasmid R1 Replication, **228**, 787–802.

λ branched
T4 Endonuclease VII Resolves Cruciform DNA with Nick and Counter-nick and Its Activity is Directed by Local Nucleotide Sequence, **223**, 607–615.

λ bulged bases
Three-dimensional *Structures* of Bulge-containing DNA Fragments, **225**, 397–431.

λ buoyant density centrifugation
Conformation of DNA Packaged in Bacteriophage T7. Analysis by use of Ultraviolet Light-induced DNA–Capsid Cross-linking, **223**, 999–1011.

λ cassette mutagenesis
Signal Sequences Containing Multiple Aromatic Residues, **224**, 77–85.

λ catenation
Interlocking of Plasmid DNAs due to *Lac* Repressor–Operator Interaction, **228**, 1104–1114.

λ cleavage
Camptothecin Inhibits Both the Cleavage and Religation Reactions of Eukaryotic DNA Topoisomerase I, **228**, 1025–1030.

λ conformation
Conformational Sub-states in *B*-DNA, **226**, 775–794.

λ context effects
Base Pairing Geometry in GA Mismatches Depends Entirely on the Neighboring Sequence, **228**, 1037–1041.

λ CpG island
Binding of Proteins from Embryonic and Differentiated Cells to a Bidirectional Promoter Contained within a CpG Island, **226**, 289–299.

λ cross-linking
Conformation of DNA Packaged in Bacteriophage T7. Analysis by use of Ultraviolet Light-induced DNA–Capsid Cross-linking, **223**, 999–1011.

λ cytosine-5-methyltransferase
Structure-related Properties of the Mutagenic Lesion 6-*O*-Methylguanine in DNA, **228**, 1137–1146.

λ drug dimer
Structure Refinement of the Chromomycin Dimer–DNA Oligomer Complex in Solution, **223**, 259–279.

λ endonuclease III
Crystallization and Crystallographic Characterization of the Iron–Sulfur containing DNA-repair Enzyme Endonuclease III from *Escherichia coli*, **227**, 347–351.

λ excision-repair
Crystallization and Crystallographic Characterization of the Iron–Sulfur containing DNA-repair Enzyme Endonuclease III from *Escherichia coli*, **227**, 347–351.

λ Exonuclease VIII
Effect of Terminal Non-homology on Intramolecular Recombination of Linear Plasmid Substrates in *Escherichia coli*, **227**, 72–80.

DNA footprinting
Characterization of the Arginine Repressor from *Salmonella typhimurium* and its Interactions with the *carAB* Operator, **225**, 11–24.
Formation of Open and Elongating Transcription Complexes by RNA Polymerase III, **226**, 47–58.
Sequence-specific DNA Binding by a Two Zinc-finger Peptide from the *Drosophila melanogaster* Tramtrack Protein, **226**, 349–366.

DNA four-stranded pairing
RecA Protein-promoted Homologous Pairing and Strand Exchange between Intact and Partially Single-stranded Duplex DNA, **223**, 79–93.

DNA GA mismatch
Adjacent G : A Mismatches Stabilized by Cross-strand Base-stacking and B_{II} Phosphate Groups, **228**, 138–155.
Base Pairing Geometry in GA Mismatches Depends Entirely on the Neighboring Sequence, **228**, 1037–1041.

DNA gyrase
Control of Segregation of Chromosomal DNA by Sex Factor F in *Escherichia coli*. Mutants of DNA Gyrase Subunit A Suppress *letD* (*ccdB*) Product Growth Inhibition, **225**, 39–52.

DNA helical phasing
DNA Topology-mediated Regulation of *Transcription* Initiation from the Tandem Promoters of the *ilvGMEDA* Operon of *Escherichia coli*, **224**, 919–935.

DNA helical repeat
An Accurate Method for Determining the Helical Repeat of DNA in Solution Reveals Differences to the Crystal Structures of Two B-DNA Decamers, **228**, 322–326.

DNA Holliday structure
T4 Endonuclease VII Resolves Cruciform DNA with Nick and Counter-nick and Its Activity is Directed by Local Nucleotide Sequence, **223**, 607–615.
Thermodynamics of DNA Branching, **223**, 781–789.

DNA homologous recombination
RecA Protein-promoted Homologous Pairing and Strand Exchange between Intact and Partially Single-stranded Duplex DNA, **223**, 79–93.

DNA Hoogsteen base-pair
Proton *Nuclear Magnetic Resonance* Assignments and Structural Characterization of an Intramolecular DNA Triplex, **225**, 755–773.

DNA hydration
Molecular Structure of the *B*-DNA Dodecamer $d(CGCAAATTTGCG)_2$. An Examination of Propeller Twist and Minor-groove Water *Structure* at 2·2 Å Resolution, **226**, 1161–1173.

DNA insertion
α-Tubulin Gene Family of Maize (*Zea mays* L.). Evidence for Two Ancient α-Tubulin Genes in Plants, **227**, 81–96.

DNA integration
Recombination Between Adenovirus Type 12 DNA and a Hamster Preinsertion Sequence in a Cell-free System. Patch Homologies and Fractionation of Nuclear Extracts, **226**, 117–126.

DNA intercalator
Formation of the Right before the Left Mature DNA End during Packaging–Cleavage of Bacteriophage T7 DNA Concatemers, **226**, 311–317.

DNA Jumping techniques
A High Degree of Macronuclear Chromosome Polymorphism is Generated by Variable DNA Rearrangements in *Paramecium primaurelia* during Macronuclear Differentiation, **225**, 661–678.

DNA LINE-1 repetitive
Strand-specific LINE-1 *Transcription* in Mouse F9 Cells Originates from the Youngest Phylogenetic Subgroup of LINE-1 Elements, **224**, 559–574.

DNA loop formation
Conformational and Thermodynamic Properties of Supercoiled DNA, **227**, 1224–1243.

DNA looping
Differential Binding of Wild-type and a Mutant RepA Protein to *oriR* Sequence Suggests a Model for the Initiation of Plasmid R1 Replication, **228**, 787–802.
Interlocking of Plasmid DNAs due to *Lac* Repressor–Operator Interaction, **228**, 1104–1114.

DNA major groove
Crystal and Molecular Structure of the *A*-DNA Dodecamer d(CCGTACGTACGG). Choice of Fragment Helical Axis, **227**, 738–756.

DNA melting
Characterization of Bacteriophage T7 RNA Polymerase by Linker Insertion Mutagenesis, **228**, 488–505.

DNA minicircles
Chromatin Reconstitution on Small DNA Rings. IV. DNA Supercoiling and Nucleosome Sequence Preference, **224**, 981–1001.

DNA minor groove
Structure Refinement of the Chromomycin Dimer–DNA Oligomer Complex in Solution, **223**, 259–279.
Crystal Structure of a Berenil–d(CGCAAATTTGCG) Complex. An Example of Drug–DNA Recognition Based on Sequence-dependent Structural Features, **226**, 481–490.
The *X-ray Structure* of the DNase I-d $(GGTATACC)_2$ Complex at 2·3 Å Resolution, **226**, 1237–1256.

DNA mitochondrial
Gene Organization Deduced from the Complete Sequence of Liverwort *Marchantia polymorpha* Mitochondrial DNA. Primitive Form of Plant Mitochondrial Genome, **223**, 1–7.

DNA models
The Fine Structure of Two DNA Dodecamers Containing the cAMP Responsive Element Sequence and Its Inverse. Nuclear Magnetic Resonance and Molecular Simulation Studies, **227**, 852–875.

DNA modification
McrBC: a Multisubunit GTP-dependent Restriction Endonuclease, **225**, 327–348.

DNA molecular modelling
Molecular Dynamics Simulation of the DNA Triplex $d(TC)_5{\cdot}d(GA)_5{\cdot}d(C^+T)_5$, **223**, 519–529.
Conformational Sub-states in *B*-DNA, **226**, 775–794.

DNA Monte Carlo simulation
Conformational and Thermodynamic Properties of Supercoiled DNA, **227**, 1224–1243.

DNA nicking
Mutagenesis of a Conserved Region of the Gene Encoding the FLP Recombinase of *Saccharomyces cerevisiae*. A Role for Arginine 191 in Binding and Ligation, **225**, 313–326.

DNA nucleotide sequence
Mathematical Characterization of Chaos Game Representation. New Algorithms for Nucleotide Sequence Analysis, **228**, 715–719.

DNA packaging
Bacteriophage P1 Genes Involved in the Recognition and Cleavage of the Phage Packaging Site (*pac*), **223**, 977–989.
Molecular Analysis of the *Bacillus subtilis* Bacteriophage SPP1 Region Encompassing Genes *1* to *6*. The Products of Gene *1* and Gene *2* are Required for *pac* Cleavage, **224**, 87–102.
Bacteriophage P22 Portal Protein is Part of the Gauge that Regulates Packing Density of Intravirion DNA, **224**, 1055–1074.
Identification of a Gene in *Bacillus subtilis* Bacteriophage SPP1 Determining the Amount of Packaged DNA, **225**, 81–92.
Formation of the Right before the Left Mature DNA End during Packaging–Cleavage of Bacteriophage T7 DNA Concatemers, **226**, 311–317.
Molecular Genetic Analysis of Bacteriophage P22 Ge Product, a Protein Involved in the Initiation of He ful DNA Packaging, **227**, 1086–1099.
Genetic Analysis of *cosB*, the Binding Site for Termin the DNA Packaging Enzyme of Bacteriophage *λ*, 2 58–71.
Genetic Analysis of Mutations Affecting Terminase, Bacteriophage *λ* DNA Packaging Enzyme, that S press Mutations in *cosB*, the Terminase Binding S **228**, 72–87.

DNA palindromic sequences
RNA Processing Modulates the Expression of the *DABC* Operon in *Pseudomonas aeruginosa*, 943–957.

DNA Physical map
Molecular and Genomic Organization of Clusters of R titive DNA Sequences in *Caenorhabditis elegans*, 159–168.

DNA pitch
Structure of RecA–DNA Complexes Studied by Comb tion of Linear Dichroism and Small-angle Neu Scattering Measurements on Flow-oriented Sam **226**, 1175–1191.

DNA poly(dA-dT)
Investigations on the Dynamic Structures of Adenine Thymine-containing DNA, **223**, 455–476.

DNA polymerase I
Characterization of Bacteriophage T7 RNA Polyme by Linker Insertion Mutagenesis, **228**, 488–505.

DNA protein binding
Structure of the TFIIIA–5 S DNA Complex, 407–417.
Topography of Transcription Factor Complexes on *Saccharomyces cerevisiae* 5 S RNA Gene, 1063–1077.

***dna*R**
Novel *Escherichia coli* Mutant, *dnaR*, Thermosensitiv Initiation of Chromosome Replication, **226**, 979–9
dnaR Function of the *prs* Gene of *Escherichia co* Initiation of Chromosome Replication, **226**, 989–9

DNA rearrangement
A High Degree of Macronuclear Chromosome Poly phism is Generated by Variable DNA Rearrangem in *Paramecium primaurelia* during Macronuclear ferentiation, **225**, 661–678.

DNA recognition
Sequence-specific DNA Binding by a Two Zinc-fi Peptide from the *Drosophila melanogaster* Tramt Protein, **226**, 349–366.

DNA recombinase
Half-site Strand Transfer by Step-arrest Mutants of Y Site-specific Recombinase Flp, **225**, 643–649.

DNA recombination
Inhibitory Effects of N-and C-terminal Truncated *Es ichia coli recA* Gene Products on Functions of Wild-type *recA* Gene, **223**, 105–114.
C-terminal Truncated *Escherichia coli* RecA Pr RecA5327 Has Enhanced Binding Affinities to Sin and Double-stranded DNAs, **223**, 115–129.
Thermodynamics of DNA Branching, **223**, 781–789.
Genetical and Biochemical Evidence for the Involve of the Coprotease Domain of *Escherichia coli* H Protein in Recombination, **223**, 823–829.
Direct Visualization of Dynamics and Co-operative formational Changes within RecA Filaments Appear to be Associated with the Hydrolysis of Ad sine 5′-O-(3-Thiotriphosphate), **225**, 193–216.
Half-site Strand Transfer by Step-arrest Mutants of Y Site-specific Recombinase Flp, **225**, 643–649.
Unwinding of Heterologous DNA by RecA Protein du the Search for Homologous *Sequences*, **226**, 127–1
Structure of DNA–RecA Complexes Studied by Res Differential Linear Dichroism and Fluoresc

Spectroscopy for a Genetically Engineered RecA Protein, **226**, 1193–1205.
Effect of Terminal Non-homology on Intramolecular Recombination of Linear Plasmid Substrates in *Escherichia coli*, **227**, 72–80.

religation
Camptothecin Inhibits Both the Cleavage and Religation Reactions of Eukaryotic DNA Topoisomerase I, **228**, 1025–1030.

repeats
Structure of the Pericentric Long Arm Region of the Human Y Chromosome, **228**, 421–432.
DNA Sequence Analysis of 66 kb of the Human MHC Class II Region Encoding a Cluster of Genes for Antigen Processing, **228**, 433–441.

repetitive
Balbiani Ring 1 Gene in *Chironomus tentans*. Sequence Organization and Dynamics of a Coding Minisatellite, **225**, 349–361.

replication
Specificity of Origin Recognition by Replication Initiator Protein in Plasmids of the pT181 Family is Determined by a Six Amino Acid Residue Element, **223**, 145–158.
Genetic and Functional Analysis of the Basic Replicon of pPS10, a Plasmid Specific for *Pseudomonas* Isolated from *Pseudomonas syringae patovar savastanoi*, **223**, 415–426.
Localization and DNA Sequence of a Replication Origin in the Rhodopsin Gene Locus of Chinese Hamster Cells, **224**, 343–358.
Cryoelectron Microscopic Visualization of Functional Subassemblies of the Bacteriophage T4 DNA Replication Complex, **224**, 395–412.
The *mcm2* Mutation of Yeast Affects Replication, Rather than Segregation or Amplification of the Two Micron Plasmid, **224**, 545–558.
Telomere End-replication Problem and Cell Aging, **225**, 951–960.
Structural Alterations of Double-stranded DNA in Complex with the Adenovirus DNA-binding Protein. Implications for its Function in DNA Replication, **225**, 999–1011.
Stability of Coliphage λ DNA Replication Initiator, the λO Protein, **226**, 675–680.
Inheritance of the Replication Complex by One of Two Daughter Copies During λ Plasmid Replication in *Escherichia coli*, **226**, 681–688.
Cell-cycle Control of a Cloned Chromosomal Origin of Replication from *Caulobacter crescentus*, **226**, 959–977.
Novel *Escherichia coli* Mutant, *dnaR*, Thermosensitive in Initiation of Chromosome Replication, **226**, 979–987.
dnaR Function of the *prs* Gene of *Escherichia coli* in Initiation of Chromosome Replication, **226**, 989–996.
Mutations Affecting RNA–DNA Hybrid Formation of the ColE1 Replication Primer RNA. Restoration of RNA I Sensitivity to a Copy-number Mutant by Second-site Mutations, **226**, 997–1008.
Definition and Polarity of Action of DNA Replication Terminators in *Bacillus subtilis*, **227**, 648–657.
Rolling-circle Replication of a High-copy BPV-1 Plasmid, **228**, 1–6.
Role of MotA Transcription Factor in Bacteriophage T4 DNA Replication, **228**, 88–100.
Differential Binding of Wild-type and a Mutant RepA Protein to *oriR* Sequence Suggests a Model for the Initiation of Plasmid R1 Replication, **228**, 787–802.
Interlocking of Plasmid DNAs due to *Lac* Repressor–Operator Interaction, **228**, 1104–1114.

replication termination
Definition and Polarity of Action of DNA Replication Terminators in *Bacillus subtilis*, **227**, 648–657.

DNA rolling circle
Rolling-circle Replication of a High-copy BPV-1 Plasmid, **228**, 1–6.

DNA sequence
Localization and DNA Sequence of a Replication Origin in the Rhodopsin Gene Locus of Chinese Hamster Cells, **224**, 343–358.
Primary Structure of the Second Largest Subunit of Human RNA Polymerase II (or B), **226**, 1295–1299.
Molecular Cloning and Analysis of the Gene Encoding the NADH Oxidase from *Streptococcus faecalis* 10C1. Comparison with NADH Peroxidase and the Flavoprotein Disulfide Reductases, **227**, 658–671.

DNA sequence analysis
Mathematical Characterization of Chaos Game Representation. New Algorithms for Nucleotide Sequence Analysis, **228**, 715–719.

DNA sizing gene
Identification of a Gene in *Bacillus subtilis* Bacteriophage SPP1 Determining the Amount of Packaged DNA, **225**, 81–92.

DNA splicing
Features of Spliceosome Evolution and Function Inferred from an Analysis of the Information at Human Splice Sites, **228**, 1124–1136.

DNA strand exchange
Characterization of DNA-binding and Strand-exchange Stimulation Properties of y-RPA, a Yeast Single-strand-DNA-binding Protein, **227**, 54–71.

DNA strand separation
Energetics of the Strand Separation Transition in Superhelical DNA, **225**, 835–847.

DNA structure
Structure Refinement of the Chromomycin Dimer–DNA Oligomer Complex in Solution, **223**, 259–279.
Molecular Dynamics Simulation of the DNA Triplex $d(TC)_5 \cdot d(GA)_5 \cdot d(C^+T)_5$, **223**, 519–529.
T4 Endonuclease VII Resolves Cruciform DNA with Nick and Counter-nick and Its Activity is Directed by Local Nucleotide Sequence, **223**, 607–615.
Intramolecular dG·dG·dC Triplex Detected in *Escherichia coli* Cells, **223**, 817–822.
Structure of a *B*-DNA Decamer with a Central T-A Step: C-G-A-T-T-A-A-T-C-G, **225**, 379–395.
Three-dimensional *Structures* of Bulge-containing DNA Fragments, **225**, 397–431.
Crystal Structure of the 2:1 Complex Between d(GAAGCTTC) and the Anticancer Drug Actinomycin D, **225**, 445–456.
DNA Curvature does not require Bifurcated Hydrogen Bonds or Pyrimidine Methyl Groups, **225**, 729–738.
Structural Alterations of Double-stranded DNA in Complex with the Adenovirus DNA-binding Protein. Implications for its Function in DNA Replication, **225**, 999–1011.
Crystal Structure of a Berenil–d(CGCAAATTTGCG) Complex. An Example of Drug–DNA Recognition Based on Sequence-dependent Structural Features, **226**, 481–490.
Conformational Sub-states in *B*-DNA, **226**, 775–794.
Molecular Structure of the *B*-DNA Dodecamer $d(CGCAAATTTGCG)_2$. An Examination of Propeller Twist and Minor-groove Water *Structure* at 2·2 Å Resolution, **226**, 1161–1173.
Solution Structure of a DNA Octamer Containing the Pribnow Box *via* Restrained Molecular Dynamics Simulation with Distance and Torsion Angle Constraints Derived from Two-dimensional Nuclear Magnetic Resonance Spectral Fitting, **227**, 510–531.
Crystal and Molecular Structure of the *A*-DNA Dodecamer d(CCGTACGTACGG). Choice of Fragment Helical Axis, **227**, 738–756.
The Fine Structure of Two DNA Dodecamers Containing the cAMP Responsive Element Sequence and Its Inverse. Nuclear Magnetic Resonance and Molecular Simulation Studies, **227**, 852–875.

Solution Structure of $[d(GCGTATACGC)]_2$, **228**, 118–137.
An Accurate Method for Determining the Helical Repeat of DNA in Solution Reveals Differences to the Crystal Structures of Two B-DNA Decamers, **228**, 322–326.
In Vitro Evolution of Intrinsically Bent DNA, **228**, 803–812.
Base Pairing Geometry in GA Mismatches Depends Entirely on the Neighboring Sequence, **228**, 1037–1041.
Structure-related Properties of the Mutagenic Lesion 6-*O*-Methylguanine in DNA, **228**, 1137–1146.

DNA supercoiled
Direct Evidence for the Effect of *Transcription* on Local DNA Supercoiling *in Vivo*, **223**, 131–144.
Supercoiled DNA Energetics and Dynamics by Computer Simulation, **223**, 1089–1119.
Chromatin Reconstitution on Small DNA Rings. IV. DNA Supercoiling and Nucleosome Sequence Preference, **224**, 981–1001.
DNA Supercoiling Response of the σ^{54}-dependent *Klebsiella pneumoniae nifL* Promoter *in vitro*, **225**, 591–607.
Energetics of the Strand Separation Transition in Superhelical DNA, **225**, 835–847.
Cre-*lox* Recombination in *Escherichia coli* Cells. Mechanistic Differences from the *in Vitro* Reaction, **226**, 661–673.
Conformational and Thermodynamic Properties of Supercoiled DNA, **227**, 1224–1243.

DNA T-A step
Structure of a *B*-DNA Decamer with a Central T-A Step: C-G-A-T-T-A-A-T-C-G, **225**, 379–395.

DNA tandem repeats
Molecular and Genomic Organization of Clusters of Repetitive DNA Sequences in *Caenorhabditis elegans*, **226**, 159–168.

DNA terminator
Definition and Polarity of Action of DNA Replication Terminators in *Bacillus subtilis*, **227**, 648–657.

DNA tertiary structure
Conformational and Thermodynamic Properties of Supercoiled DNA, **227**, 1224–1243.

DNA topoisomerase II
African Swine Fever Virus Encodes a Gene with Extensive Homology to Type II DNA Topoisomerases, **228**, 1003–1010.

DNA topology
Chromatin Reconstitution on Small DNA Rings. V. DNA Thermal Flexibility of Single Nucleosomes, **228**, 327–337.

DNA triplex
RecA Protein-promoted Homologous Pairing and Strand Exchange between Intact and Partially Single-stranded Duplex DNA, **223**, 79–93.
Molecular Dynamics Simulation of the DNA Triplex $d(TC)_5{\cdot}d(GA)_5{\cdot}d(C^+T)_5$, **223**, 519–529.
Proton *Nuclear Magnetic Resonance* Assignments and Structural Characterization of an Intramolecular DNA Triplex, **225**, 755–773.

DNA twist
Chromatin Reconstitution on Small DNA Rings. V. DNA Thermal Flexibility of Single Nucleosomes, **228**, 327–337.

DNA unwinding
Unwinding of Heterologous DNA by RecA Protein during the Search for Homologous *Sequences*, **226**, 127–139.

DNA/RNA hybrid
Structural Details of Ribonuclease H from *Escherichia coli* as Refined to an Atomic Resolution, **223**, 1029–1052.

DOPA decarboxylase
Crystallization and Preliminary X-ray Analysis of Pig Kidney DOPA Decarboxylase, **224**, 1167–1170.

Drosophila melanogaster
Minigene Rescues Acetylcholinesterase Lethal Mutations in *Drosophila melanogaster*, **223**, 17–22.
Autophosphorylating Protein Kinase Activity in T like Arthropod Projectin, **224**, 287–292.
Ulysses Transposable Element of *Drosophila* Shows Structural Similarities to Functional Domain Retroviruses, **225**, 917–924.
Preliminary X-ray Crystallographic Studies on Al Dehydrogenase from *Drosophila*, **227**, 356–358.

Drug design
Refined 2·3 Å X-ray Crystal Structure of Bovine Th bin Complexes Formed with the Benzamidine Arginine-based Thrombin Inhibitors NAPAP TAPAP and MQPA. A Starting Point for Impro Antithrombotics, **226**, 1085–1099.

Drug resistance
Two Independent Amsacrine-resistant Human My Leukemia Cell Lines Share an Identical Mutation in the 170 kDa Form of Human Top merase II, **223**, 837–843.
The P-glycoprotein Gene Family of *Caenorhabditis ele* Cloning and Characterization of Genomic and Cor mentary DNA Sequences, **228**, 701–711.

Eglin *c*
Crystal and Molecular *Structure* of the Bovine α-Ch trypsin–Eglin *c* Complex at 2·0 Å Resolution, 107–123.

Electric birefringence
Zinc Induces a Bend Within the Transcription F IIIA-binding Region of the 5 S RNA Gene, 1115–1123.

Electron microscopy
Electron Microscopy of the Actin–Myosin Head Co in the Presence of ATP, **223**, 391–397.
Ubiquitous Soluble Mg^{2+}–ATPase Complex. A *Struc* Study, **223**, 557–571.
Three-dimensional *Structure* of T3 Connector Pu from Overexpressing Bacteria, **224**, 103–112.
Direct Visualization of Dynamics and Co-operative formational Changes within RecA Filaments Appear to be Associated with the Hydrolysis of A sine 5′-O-(3-Thiotriphosphate), **225**, 193–216.
Electron Microscopy of Decorated *Crystals* for the D mination of Crystallographic Rotation and Transl Parameters in Large Protein Complexes, 1065–1073.
Preliminary X-ray *Crystallographic* Analysis of I cellular Adhesion Molecule-1, **225**, 1127–1130.
A 9 Å Two-dimensional Projected *Structure* of Ch Toxin B-subunit–G_{M1} Complexes Determined by tron *Crystallography*, **226**, 23–28.
Electron Microscopic Study of (A)BC Excinuclease. is Sharply Bent in the UvrB–DNA Complex, 425–432.
Characterization of DNA-binding and Strand-exch Stimulation Properties of y-RPA, a Yeast S strand-DNA-binding Protein, **227**, 54–71.
Insect Crossbridges, Relaxed by Spin-labeled Nucle Show Well-ordered 90° State by X-ray Diffractio Electron Microscopy, but Spectra of Electron magnetic Resonance Probes Report Disorder, 678–697.
Structural Basis for the Destabilization of F-Acti Phosphate Release Following ATP Hydrolysis, 1043–1053.
Early Stages in RecA Protein-catalyzed Pairing. An of Coaggregate Formation and Non-homologous Contacts, **228**, 409–420.
Structure of the Myosin Filaments of Relaxed and Vertebrate Striated Muscle Studied by Rapid Fre Electron Microscopy, **228**, 474–487.

Electron microscopy contrast transfer function
Quantitation of Molecular Densities by Cryo-ele Microscopy. Determination of the Radial Density tribution of Tobacco Mosaic Virus, **226**, 763–774.

ron microscopy cryo
Substructure of the Flagellar Basal Body of *Salmonella typhimurium*, **223**, 171–184.
Helical reconstruction of Frozen–Hydrated Scallop Myosin Filaments, **223**, 661–671.
Direct Visualization of the Structure of the "20 S" Aggregate of Coat Protein of Tobacco Mosaic Virus. The "Disk" is the Major Structure at pH 7·0 and the *Proto*-helix at lower pH, **224**, 381–394.
Cryoelectron Microscopic Visualization of Functional Subassemblies of the Bacteriophage T4 DNA Replication Complex, **224**, 395–412.
Low Resolution Structure of Microtubules in Solution. Synchrotron X-ray Scattering and Electron Microscopy of Taxol-induced Microtubules Assembled from Purified Tubulin in Comparison with Glycerol and MAP-induced Microtubules, **226**, 169–184.
Electron Microscopic Study of (A)BC Excinuclease. DNA is Sharply Bent in the UvrB–DNA Complex, **226**, 425–432.
Conformational Switching in the Flagellar Filament of *Salmonella typhimurium*, **226**, 447–454.
Quantitation of Molecular Densities by Cryo-electron Microscopy. Determination of the Radial Density Distribution of Tobacco Mosaic Virus, **226**, 763–774.
Structural Data Suggest that the Active and Inactive Forms of the RecA Filament are not Simply Interconvertible, **227**, 334–346.
Conformational Changes of a Viral Capsid Protein. Thermodynamic Rationale for Proteolytic Regulation of Bacteriophage T4 Capsid Expansion, Co-operativity, and Super-stabilization by Soc Binding, **228**, 870–884.

ron microscopy decorated crystals
Electron Microscopy of Decorated *Crystals* for the Determination of Crystallographic Rotation and Translation Parameters in Large Protein Complexes, **225**, 1065–1073.

ron microscopy image analysis
Substructure of the Flagellar Basal Body of *Salmonella typhimurium*, **223**, 171–184.
Two-dimensional *Crystals* of *Escherichia coli* Maltoporin and Their Interaction with the Maltose-binding Protein, **223**, 1155–1165.
Cryoelectron Microscopic Visualization of Functional Subassemblies of the Bacteriophage T4 DNA Replication Complex, **224**, 395–412.
Direct Visualization of Dynamics and Co-operative Conformational Changes within RecA Filaments That Appear to be Associated with the Hydrolysis of Adenosine 5′-O-(3-Thiotriphosphate), **225**, 193–216.

ron paramagnetic resonance
Insect Crossbridges, Relaxed by Spin-labeled Nucleotide, Show Well-ordered 90° State by X-ray Diffraction and Electron Microscopy, but Spectra of Electron Paramagnetic Resonance Probes Report Disorder, **227**, 678–697.

ron Spin resonance
Probing Protein Structure by Solvent Perturbation of *Nuclear Magnetic Resonance* Spectra. Nuclear Magnetic Resonance Spectral Editing and Topological Mapping in Proteins by Paramagnetic Relaxation Filtering, **224**, 659–670.

ron transfer
Oxidation State-dependent Conformational Changes in Cytochrome *c*, **223**, 959–976.
Refined *Crystal Structure* of Ascorbate Oxidase at 1·9 Å Resolution, **224**, 179–205.
Crystallization and Preliminary Crystallographic Study of an Octa-heme Cytochrome c_3 from *Desulfovibrio desulfuricans* Norway, **228**, 995–997.

ron transport
X-ray Diffraction by Crystals of Beef Heart Ubiquinol:Cytochrome *c* Oxidoreductase, **224**, 1161–1166.
Three-dimensional Structure of the High-potential Iron–Sulfur Protein Isolated from the Purple Phototrophic Bacterium *Rhodocyclus tenuis* Determined and Refined at 1·5 Å Resolution, **228**, 672–686.

Electrophoresis
Conformation of DNA Packaged in Bacteriophage T7. Analysis by use of Ultraviolet Light-induced DNA–Capsid Cross-linking, **223**, 999–1011.
An Accurate Method for Determining the Helical Repeat of DNA in Solution Reveals Differences to the Crystal Structures of Two B-DNA Decamers, **228**, 322–326.
In Vitro Evolution of Intrinsically Bent DNA, **228**, 803–812.

Electrostatics
Model for the Differential Stabilities of Rhinovirus and Poliovirus to Mild Acidic pH, Based on Electrostatics Calculations, **223**, 247–257.
Electrostatic Calculations of the pK_a Values of Ionizable Groups in Bacteriorhodopsin, **224**, 473–486.
Histidine–Aromatic Interactions in Barnase. Elevation of Histidine pK_a and Contribution to Protein Stability, **224**, 759–770.
The Folding of an Enzyme. II. *Substructure* of Barnase and the Contribution of Different Interactions to Protein Stability, **224**, 783–804.

Embryonal cells
Binding of Proteins from Embryonic and Differentiated Cells to a Bidirectional Promoter Contained within a CpG Island, **226**, 289–299.
Alu RNA Transcripts in Human Embryonal Carcinoma Cells. Model of Post-transcriptional Selection of Master Sequences, **226**, 689–706.

Endochitinase
Crystallization of an Endochitinase from *Hordeum vulgare* L. Seeds, **225**, 565–567.

Endoglucanase
Crystallization and Preliminary X-ray Analysis of a Fungal Endoglucanase I, **228**, 970–972.

Endoplasmic reticulum
Changing the Specificity of the Sorting Receptor for Luminal Endoplasmic Reticulum Proteins, **224**, 1–5.
Sequence of a Second Human KDEL Receptor, **226**, 913–916.

Endothiapepsin
Common Spatial Arrangements of Backbone Fragments in Homologous and Non-homologous Proteins, **225**, 5–9.

Endozepine
Three-dimensional *Structure* in Solution of Acyl-coenzyme A Binding Protein from Bovine Liver, **226**, 1131–1141.

Energy minimization
Supercoiled DNA Energetics and Dynamics by Computer Simulation, **223**, 1089–1119.
Three-dimensional Structure of Acylphosphatase. Refinement and *Structure* Analysis, **224**, 427–440.
Design and Structural Analysis of Alternative Hydrophobic Core Packing Arrangements in Bacteriophage T4 Lysozyme, **224**, 1143–1159.
Optimal Protocol and Trajectory Visualization for Conformational Searches of Peptides and Proteins, **225**, 519–532.
Quantitation of Molecular Densities by Cryo-electron Microscopy. Determination of the Radial Density Distribution of Tobacco Mosaic Virus, **226**, 763–774.

Energy transfer
Isolation, Crystallization, Crystal Structure Analysis and Refinement of B-Phycoerythrin from the Red Alga *Porphyridium sordidum* at 2·2 Å Resolution, **228**, 935–950.

Enkephalin
Optimal Protocol and Trajectory Visualization for Conformational Searches of Peptides and Proteins, **225**, 519–532.

Enzyme
Mutational Analysis of the Pseudoknot in the tRNA-like Structure of Turnip Yellow Mosaic Virus RNA. Aminoacylation Efficiency and RNA Pseudoknot Stability, **223**, 221–232.
Structure of a Ternary Complex of an Allosteric Lactate Dehydrogenase from *Bacillus stearothermophilus* at 2·5 Å Resolution, **223**, 317–335.
Three-dimensional Structure of the Bifunctional Enzyme Phosphoribosylanthranilate Isomerase : Indoleglycer olphosphate Synthase from *Escherichia coli* Refined at 2·0 Å Resolution, **223**, 477–507.
Computer Simulation of the Initial Proton Transfer Step in Human Carbonic Anhydrase I, **224**, 7–14.
Structure of the Complex Between Adenylate Kinase from *Escherichia coli* and the Inhibitor Ap A Refined at 1·9 Å Resolution. A Model for a Catalytic Transition State., **224**, 159–177.
Three-dimensional Structure of Acylphosphatase. Refinement and *Structure* Analysis, **224**, 427–440.
The Folding of an Enzyme. I. Theory of Protein Engineering Analysis of Stability and Pathway of Protein Folding, **224**, 771–782.
X-ray Diffraction by Crystals of Beef Heart Ubiquinol:Cytochrome *c* Oxidoreductase, **224**, 1161–1166.
X-ray Structure Refinement and Comparison of Three Forms of Mitochondrial Aspartate Aminotransferase, **225**, 495–517.
Effect of Active Site Residues in Barnase on Activity and Stability, **225**, 585–589.
Crystal Structure of Yeast Cu,Zn Superoxide Dismutase. *Crystallographic* Refinement at 2·5 Å Resolution, **225**, 791–809.
Domain Closure in Mitochondrial Aspartate Aminotransferase, **227**, 197–213.
Active Site of Trypanothione Reductase. A Target for Rational Drug Design, **227**, 322–333.
Discrimination of the $(\beta/\alpha)_8$-Barrel Fold, **228**, 170–187.
Crystallization and Preliminary Crystallographic Analysis of Aspartate–β–semialdehyde Dehydrogenase from *Escherichia coli*, **228**, 300–301.
Crystallization of the A-Domain of the Mannitol Transport Protein Enzyme II^{mtl}, **228**, 310–312.

Enzyme mechanism
X-ray Analysis of Substrate Analogs in the Ricin A-chain Active Site, **227**, 1136–1145.
Structure of Native and Apo Carbonic Anhydrase II and Structure of some of Its Anion–Ligand Complexes, **227**, 1192–1204.
Structure of Cobalt Carbonic Anhydrase Complexed with Bicarbonate, **228**, 1212–1218.

Enzymes
Characterization of Bacteriophage T7 RNA Polymerase by Linker Insertion Mutagenesis, **228**, 488–505.

Epidermal growth factor
Human Epidermal Growth Factor. High Resolution Solution Structure and Comparison with Human Transforming Growth Factor α, **227**, 271–282.
Characterization of a Conserved Carboxy-terminal Sequence in Secreted Proteins and a Motif Implicated in Extracellular Protein Interactions, **227**, 367–370.

Epitope
Analysis of the Chicken Fast Myosin Heavy Chain Family. Localization of Isoform-specific Antibody Epitopes and Regions of Divergence, **225**, 1143–1151.
High Resolution Functional Analysis of Antibody–Antigen Interactions, **226**, 851–865.
Refined Crystal Structure of the Influenza Virus N9 Neuraminidase–NC41 Fab Complex, **227**, 122–148.

Epitope library
Mutant Conformation of p53. Precise Epitope Mapping Using a Filamentous Phage Epitope Library, **225**, 577–583.

***ERD2* gene**
Changing the Specificity of the Sorting Receptor Luminal Endoplasmic Reticulum Proteins, **224**, 1

Erythrocyte membrane
Basis of Unique Red Cell Membrane Properties in He tary Ovalocytosis, **223**, 949–958.

Escherichia coli
Crystallization and Preliminary Crystallographic Da *Escherichia coli* TEM1 β-Lactamase, **223**, 377–38
Intramolecular dG·dG·dC Triplex Detected in *Escher coli* Cells, **223**, 817–822.
Structural Details of Ribonuclease H from *Escherichi* as Refined to an Atomic Resolution, **223**, 1029–1
Regulation of Open Complex Formation at the *Escher coli* Galactose Operon Promoters. Simultaneous I action of RNA Polymerase, *gal* Repressor and cAMP, **224**, 15–29.
Parameters Affecting Transcription Termination *Escherichia coli* RNA Polymerase. I. Analysis Rho-independent Terminators, **224**, 31–51.
Biogenesis of Outer Membrane Protein PhoE of *Es chia coli*. Evidence for Multiple SecB-binding Si the Mature Portion of the PhoE Protein, **224**, 369-
Secretion of T Cell Receptor Fragments From Rec nant *Escherichia coli* Cells, **224**, 885–890.
Supercoiling, Integration Host Factor, and a Dual moter System, Participate in the Control o Bacteriophage α pL Promoter, **224**, 937–948.
Crystallization of Aspartyl-t Synthetase-$tRNA^{Asp}$ Complex from *Escherichi* and First Crystallographic Results, **224**, 1171–11
Control of Segregation of Chromosomal DNA by Factor F in *Escherichia coli*. Mutants of DNA G Subunit A Suppress *letD* (*ccdB*) Product G Inhibition, **225**, 39–52.
Both Forms of Translational Initiation Factor IF2 (β) are Required for Maximal Growth of *Esche coli*. Evidence for Two Translational Initiation C for IF2β, **225**, 67–80.
Structural Analysis of Ternary Complexes of *Esche coli* RNA Polymerase. Individual Complexes H along Different *Transcription* Units Have Distinc Unexpected Biochemical Properties, **225**, 221–23
Culture Conditions Differentially Affect the *ranslati* Individual *Escherichia coli* mRNAs, **226**, 597–60
Positive Regulation of the Expression of the *Esche coli pts* Operon. Identification of the Regul Regions, **226**, 623–635.
Stimulation of the Phage λ pL Promoter by Integ Host Factor Requires the Carboxy Terminus of Subunit of RNA Polymerase, **227**, 985–990.
Positive and Negative Effects of DNA Bending on A tion of Transcription from a Distant Site, 996–1008.
Cloning and Analysis of the Entire *Escherichia col* Gene. *arms* is Identical to *hmp1* and Encodes kDa Protein that Migrates as a 180 kDa Protein 30–40.
Crystallization and Preliminary Crystallographic An of Aspartate–β–semialdehyde Dehydrogenase *Escherichia coli*, **228**, 300–301.

Esterase
Crystallization and Preliminary Crystallographic D a *Streptomyces scabies* Extracellular Esterase, 569–571.

Ethyl Methanesulfonate
Base Alterations in Yeast Induced by Alkylating A with Differing Swain-Scott Substrate Constants 617–626.

Evolution
Evolutionary Conservativeness of Electric Field i Cu,Zn Superoxide Dismutase Active Site. Evide Co-ordinated Mutation of Charged Amino Residues, **223**, 337–342.
Gene Conversions Within the Skeletal Myosin Mul Family, **223**, 383–387.

GMC Oxidoreductases. A Newly Defined Family of Homologous Proteins with Diverse Catalytic Activities, **223**, 811–814.
Analysis of Insertions/Deletions in Protein Structures, **224**, 461–471.
Strand-specific LINE-1 *Transcription* in Mouse F9 Cells Originates from the Youngest Phylogenetic Subgroup of LINE-1 Elements, **224**, 559–574.
Extreme Divergence of a Novel Wheat Thionin Generated by a Mutational Burst Specifically Affecting the Mature Protein Domain of the Precursor, **224**, 1003–1009.
Comparison of the Refined *Crystal Structures* of Liganded and Unliganded Chicken, Yeast and Trypanosomal Triosephosphate Isomerase, **224**, 1115–1126.
Ulysses Transposable Element of *Drosophila* Shows High Structural Similarities to Functional Domains of Retroviruses, **225**, 917–924.
Co-optimization of Ribozyme Substrate Stacking and L-Arginine Binding, **225**, 945–949.
Genomic Organization and Context of a Trypanosome Variant Surface Glycoprotein Gene Family, **225**, 961–971.
Sequence Divergence among Members of a Trypanosome Variant Surface Glycoprotein Gene Family, **225**, 973–983.
Molecular and Genomic Organization of Clusters of Repetitive DNA Sequences in *Caenorhabditis elegans*, **226**, 159–168.
Primary Structure of the Second Largest Subunit of Human RNA Polymerase II (or B), **226**, 1295–1299.
α-Tubulin Gene Family of Maize (*Zea mays* L.). Evidence for Two Ancient α-Tubulin Genes in Plants, **227**, 81–96.
Anatomy and Evolution of Proteins Displaying the Viral Capsid Jellyroll Topology, **228**, 220–242.
Numerous Group I Introns with Variable Distributions in the Ribosomal DNA of a Lichen Fungus, **228**, 315–321.
Is the Bacteriophage Lambda Lysozyme an Evolutionary Link or a Hybrid between the C and V-type Lysozymes? Homology Analysis and Detection of the Catalytic Amino Acid Residues, **228**, 529–538.
A Myoglobin Evolved from Indoleamine 2,3-dioxygenase, **228**, 698–700.
Features of Spliceosome Evolution and Function Inferred from an Analysis of the Information at Human Splice Sites, **228**, 1124–1136.

H exchange
Secondary Structure Changes Stabilize the Reactive-centre Cleaved Form of SERPINs. A Study by ^{1}H Nuclear Magnetic Resonance and Fourier Transform Infrared Spectroscopies, **228**, 1235–1254.

lucanase
Crystallization of the Exo(1,3)-β-Glucanase from *Candida albicans*, **225**, 217–218.

ucleases single-strand specific
ATP Hydrolysis and the Displaced Strand are Two Factors that Determine the Polarity of RecA-promoted DNA Strand Exchange, **227**, 38–53.

eptidase
Structure Determination and Refinement of Bovine Lens Leucine Aminopeptidase and its Complex with Bestatin, **224**, 113–140.

acellular matrix
Liquid Crystallinity in Condensed Type I Collagen Solutions. A Clue to the Packing of Collagen in Extracellular Matrices, **224**, 861–873.

tor
Fate of the SpoIIID Switch Protein during *Bacillus subtilis* Sporulation Depends on the Mother-cell Sigma Factor, σ^K, **228**, 840–849.

F-antigen
Tetrahymena Gene Encodes a Protein that is Homologous with the Liver-specific F-antigen and Associated with Membranes of the Golgi Apparatus and Transport Vesicles, **228**, 850–861.

Fatty acids
Crystallization and Preliminary X-ray Diffraction Studies of Mitochondrial Short-chain Δ^3,Δ^2-Enoyl-CoA Isomerase from Rat Liver, **224**, 273–275.
Preliminary Crystallographic Data for Stearoyl-acyl Carrier Protein Desaturase from Castor Seed, **225**, 561–564.
Crystallization, Structure Determination and Least-squares Refinement to 1·75 Å Resolution of the Fatty-acid-binding Protein Isolated from *Manduca sexta* L., **228**, 208–219.

Ferritin
Loop Mutations Can Cause a Substantial Conformational Change in the Carboxy Terminus of the Ferritin Protein, **227**, 532–543.

Fiber diffraction
Three-dimensional Structure of a Cloning Vector. X-ray Diffraction Studies of Filamentous Bacteriophage M13 at 7 Å Resolution, **226**, 455–470.
Structure of Tropomyosin at 9 Ångstroms Resolution, **227**, 441–452.
Structure of the U2 Strain of Tobacco Mosaic Virus Refined at 3·5 Å Resolution Using X-ray Fiber Diffraction, **228**, 516–528.

Fibrin
Solution Structure of the Fibrin Binding Finger Domain of Tissue-type Plasminogen Activator Determined by ^{1}H Nuclear Magnetic Resonance, **225**, 821–833.

Fibroblasts
Telomere End-replication Problem and Cell Aging, **225**, 951–960.

Fibronectin
Refined Solution Structure and Ligand-binding Properties of PDC-109 Domain b. A Collagen-binding Type II Domain, **223**, 281–298.
Domain Structure and Domain–Domain Interactions in the Carboxy-terminal Heparin Binding Region of Fibronectin, **227**, 1182–1191.

FIS
Crystal Structure of the Factor for Inversion Stimulation FIS, at 2·0 Å Resolution, **226**, 209–226.

Flagella
Morphological Pathway of Flagellar *ssembly* in *Salmonella typhimurium*, **226**, 433–446.
Conformational Switching in the Flagellar Filament of *Salmonella typhimurium*, **226**, 447–454.
Terminal Disorder: A Common Structural Feature of the Axial Proteins of Bacterial Flagella, **226**, 575–579.
M Ring, S Ring and Proximal Rod of the Flagellar Basal Body of *Salmonella typhimurium* are Composed of Sub units of a Single Protein, FliF, **227**, 672–677.
Structure of Striated Microtubule-associated Fibers of Flagellar Roots. Comparison of Native and Reconstituted States, **227**, 698–710.

Flagella basal body
Structure of Striated Microtubule-associated Fibers of Flagellar Roots. Comparison of Native and Reconstituted States, **227**, 698–710.
Organization and Ordered Expression of *Caulobacter* Genes Encoding Flagellar Basal Body Rod and Ring Proteins, **228**, 1147–1162.

Flavin
Crystallization and Preliminary Crystallographic Studies of the FAD Domain of Corn NADH:Nitrate Reductase, **224**, 277–279.

Flavodoxin
Crystal Structure of Oxidized Flavodoxin from a Red Alga *Chondrus crispus* Refined at 1·8 Å Resolution. Description of the Flavin Mononucleotide Binding Site, **225**, 775–789.

Folate
Purification and Crystallization of *Lactobacillus casei* Folylpolyglutamate Synthetase Expressed in *Escherichia coli*, **224**, 1179–1180.

Folylpolyglutamate synthetase
Purification and Crystallization of *Lactobacillus casei* Folylpolyglutamate Synthetase Expressed in *Escherichia coli*, **224**, 1179–1180.

Foot-and-Mouth Disease Virus
Crystallization and Preliminary X-ray Analysis of Three Serotypes of Foot-and-Mouth Disease Virus, **228**, 1263–1268.

Formate
Structure of Native and Apo Carbonic Anhydrase II and Structure of some of Its Anion–Ligand Complexes, **227**, 1192–1204.

Formyl group
Nucleotides of tRNA Governing the Specificity of *Escherichia coli* Methionyl-$tRNA_f^{Met}$ Formyltransferase, **224**, 359–367.

Fractal structures
Mathematical Characterization of Chaos Game Representation. New Algorithms for Nucleotide Sequence Analysis, **228**, 715–719.

Free energy
Computer Simulation of the Initial Proton Transfer Step in Human Carbonic Anhydrase I, **224**, 7–14.
Effect of the Asn-52→Ile Mutation on the Redox Potential of Yeast Cytochrome *c*. Theory and Experiment, **224**, 589–600.

Freeze-substitution
Structure of the Myosin Filaments of Relaxed and Rigor Vertebrate Striated Muscle Studied by Rapid Freezing Electron Microscopy, **228**, 474–487.

FT-IR spectroscopy
Secondary Structure Changes Stabilize the Reactive-centre Cleaved Form of SERPINs. A Study by ^1H Nuclear Magnetic Resonance and Fourier Transform Infrared Spectroscopies, **228**, 1235–1254.

β-galactosidase
Crystallization of β-Galactosidase from *Escherichia coli*, **223**, 1177–1182.
From Adenylate Cyclase to Guanylate Cyclase. Mutational Analysis of a Change in Substrate Specificity, **225**, 933 938.

Gap junction
Membrane Topology and Quaternary Structure of Cardiac Gap Junction Ion Channels, **223**, 929–947.

Gas vacuoles
Three Different but Related Gene Clusters Encoding Gas Vesicles in Halophillic Archaea, **227**, 586–592.

Gastric lipase
Isoform Purification of Gastric Lipases. Towards Crystallization, **225**, 147–153.

Gel electrophoresis
Mutational Spectra in Human B-cells. Spontaneous, Oxygen and Hydrogen Peroxide-induced Mutations at the *hprt* Gene, **228**, 813–826.

Gelsolin
Crystallization of the Complex of Actin with Gelsolin Segment 1, **226**, 899–901.

Gene conversion
Gene Conversions Within the Skeletal Myosin Multigene Family, **223**, 383–387.
Fetal Recruitment of Anthropoid γ-Globin Genes. Findings from Phylogenetic Analyses Involving the 5′-Flanking Sequences of the ψγ′ Globin Gene of S[illegible] monkey *Ateles geoffroyi*, **224**, 875–881.

Gene deletion
Small Single-copy Region of Plastid DNA in the [illegible] photosynthetic Angiosperm *Epifagus virginiana* [illegible] tains Only Two Genes. Differences Among Dic[illegible] Monocots and Bryophytes in Gene Organization [illegible] Non-bioenergetic Locus, **223**, 95–104.

Gene disruption
Characterization of Assembly Intermediates [illegible] NADH : Ubiquinone Oxidoreductase (Complex [illegible] Accumulated in *Neurospora* Mitochondria by G[illegible] Disruption, **227**, 1032–1042.

Gene duplication
Fetal Recruitment of Anthropoid γ-Globin Genes. I[illegible] ings from Phylogenetic Analyses Involving th[illegible] Flanking Sequences of the ψγ′ Globin Gene of S[illegible] monkey *Ateles geoffroyi*, **224**, 875–881.
Extreme Divergence of a Novel Wheat Thionin Gene[illegible] by a Mutational Burst Specifically Affecting Mature Protein Domain of the Precursor, **22**[illegible] 1003–1009.

Gene exon
G + C-rich Tract in 5′ End of Human Introns, [illegible] 108–113.
Complete Nucleotide Sequence and Structural Orga[illegible] tion of Rat Cardiac Troponin T Gene. A Single [illegible] Generates Embryonic and Adult Isoforms *via* Dev[illegible] ment Regulated Alternative Splicing, **227**, 1269–[illegible]

Gene expression
Isolation and Characterization of LexA Mutant Re[illegible] sors with Enhanced DNA Binding Affinity, **2**[illegible] 609–620.
kfrA Gene of Broad Host Range Plasmid RK2 Enco[illegible] Novel DNA-binding Protein, **225**, 651–660.
Promoter Sequence Containing $(CT)_n \cdot (GA)_n$ Repea[illegible] Critical for the Formation of the DNase I Hyperse[illegible] ive Sites in the *Drosophila hsp26* Gene, **225**, 985–[illegible]
Isorepressor of the *gal* Regulon in *Escherichia coli*, [illegible] 69–83.
Arginine Regulon of *Escherichia coli* K-12. A Stuc[illegible] Repressor–Operator Interactions and of *in Vitro* I[illegible] ing Affinities *versus in Vivo* Repression, **226**, 367–[illegible]
Binding of the Arginine Repressor of *Escherichia coli* [illegible] to its Operator Sites, **226**, 387–397.
Translation Inhibition by an mRNA Coding Reg[illegible] Secondary Structure is Determined by Its Proxi[illegible] to the *AUG* Initiation Codon, **226**, 609–621.
Sporulation Regulatory Protein GerE from *Bacillus* [illegible] *lis* Binds to and Can Activate or Repress Transcri[illegible] from Promoters for Mother-cell-specific Genes, [illegible] 1037–1050.
Contacts between Tet Repressor and *tet* Opera[illegible] Revealed by New Recognition Specificities of S[illegible] Amino Acid Replacement Mutants, **226**, 1257–12[illegible]
Tubulin Gene Expression in Maize (*Zea mays* L.). Ch[illegible] in Isotype Expression along the Developmental A[illegible] Seedling Root, **227**, 97–107.
Gene Structure of Human CD59 and Demonstration [illegible] Discrete mRNAs are Generated by Alternative P[illegible] denylation, **227**, 971–976.

Gene family
Ubiquitous Soluble Mg^{2+}–ATPase Complex. A *Struc*[illegible] Study, **223**, 557–571.
Balbiani Ring 1 Gene in *Chironomus tentans*. Sequ[illegible] Organization and Dynamics of a Coding Minisate[illegible] **225**, 349–361.
Analysis of the Chicken Fast Myosin Heavy Chain Fa[illegible] Localization of Isoform-specific Antibody Epito[illegible] and Regions of Divergence, **225**, 1143–1151.
α-Tubulin Gene Family of Maize (*Zea mays* L.). Evid[illegible] for Two Ancient α-Tubulin Genes in Plants, **2**[illegible] 81–96.
Tunicate Muscle Actin Genes. Structure and Organiz[illegible] as a Gene Cluster, **227**, 955–960.

fusion
Small Single-copy Region of Plastid DNA in the Non-photosynthetic Angiosperm *Epifagus virginiana* Contains Only Two Genes. Differences Among Dicots, Monocots and Bryophytes in Gene Organization at a Non-bioenergetic Locus, **223**, 95–104.
Membrane Protein Spanning Segments as Export Signals, **224**, 539–543.

housekeeping
Binding of Proteins from Embryonic and Differentiated Cells to a Bidirectional Promoter Contained within a CpG Island, **226**, 289–299.
Acyl-CoA-binding Protein/Diazepam-binding Inhibitor Gene and Pseudogenes. A Typical Housekeeping Gene Family, **228**, 1011–1022.

induced mutations
Mutagenicity of a Unique Apurinic/Apyrimidinic Site in Mammalian Cells, **227**, 981–984.

number paradox
Molecular Analysis of *Saccharomyces cerevisiae* Chromosome I. On the Number of Genes and the Identification of Essential Genes Using Temperature-sensitive-lethal Mutations, **225**, 53–65.

phylogenetic footprints
Fetal Recruitment of Anthropoid γ-Globin Genes. Findings from Phylogenetic Analyses Involving the 5′-Flanking Sequences of the $\psi\gamma'$ Globin Gene of Spider monkey *Ateles geoffroyi*, **224**, 875–881.

post-transcriptional regulation
Mechanism of Post-segregational Killing by the *hok/sok* System of Plasmid R1. Sok Antisense RNA Regulates *hok* Gene Expression Indirectly Through the Overlapping *mok* Gene, **223**, 41–54.

structure
Balbiani Ring 1 Gene in *Chironomus tentans*. Sequence Organization and Dynamics of a Coding Minisatellite, **225**, 349–361.
G + C-rich Tract in 5′ End of Human Introns, **227**, 108–113.
Gene Structure of Human CD59 and Demonstration that Discrete mRNAs are Generated by Alternative Polyadenylation, **227**, 971–976.

structure prediction
Prediction of Gene Structure, **226**, 141–157.
Determination of Eukaryotic Protein Coding Regions Using *Neural Networks* and Information Theory, **226**, 471–479.

targeting
Cre-*lox* Recombination in *Escherichia coli* Cells. Mechanistic Differences from the *in Vitro* Reaction, **226**, 661–673.

transcribed spacer
Functional Analysis of Internal Transcribed Spacer 2 of *Saccharomyces cerevisiae* Ribosomal DNA, **223**, 899–910.

ic code
Influence of Codon Context on UGA Suppression and Readthrough, **225**, 261–269.

ic diversity
Simplified Methods for Construction, Assessment and Rapid Screening of Peptide Libraries in Bacteriophage, **227**, 711–718.

ic map
Gene Organization Deduced from the Complete Sequence of Liverwort *Marchantia polymorpha* Mitochondrial DNA. Primitive Form of Plant Mitochondrial Genome, **223**, 1–7.
Structure of the Pericentric Long Arm Region of the Human Y Chromosome, **228**, 421–432.

ne organization
Identification of a Gene in *Bacillus subtilis* Bacteriophage SPP1 Determining the Amount of Packaged DNA, **225**, 81–92.
A High Degree of Macronuclear Chromosome Polymorphism is Generated by Variable DNA Rearrangements in *Paramecium primaurelia* during Macronuclear Differentiation, **225**, 661–678.
Alu RNA Transcripts in Human Embryonal Carcinoma Cells. Model of Post-transcriptional Selection of Master Sequences, **226**, 689–706.
DNA Sequence Analysis of 66 kb of the Human MHC Class II Region Encoding a Cluster of Genes for Antigen Processing, **228**, 433–441.

Globin
Fetal Recruitment of Anthropoid γ-Globin Genes. Findings from Phylogenetic Analyses Involving the 5′-Flanking Sequences of the $\psi\gamma'$ Globin Gene of Spider monkey *Ateles geoffroyi*, **224**, 875–881.
Translation Inhibition by an mRNA Coding Region Secondary Structure is Determined by Its Proximity to the *AUG* Initiation Codon, **226**, 609–621.
Topology Fingerprint Approach to the Inverse Protein Folding Problem, **227**, 227–238.

Glucanase
Crystallization and Preliminary X-ray Diffraction Analysis of the Catalytic Domain of Cex, an Exo-β-1,4-glucanase and β-1,4-xylanase from the Bacterium *Cellulomonas fimi*, **228**, 693–695.

Glucoamylase
Crystallization and Preliminary X-ray Study of Minor Glucoamylase from *Aspergillus awamori* Variant X-100/D27, **226**, 271–272.

Glucosamine
Crystallization and Preliminary Crystallographic Studies of Glucosamine-6-phosphate Deaminase from *Escherichia coli* K12, **226**, 1283–1286.

Glucose
GMC Oxidoreductases. A Newly Defined Family of Homologous Proteins with Diverse Catalytic Activities, **223**, 811–814.

Glucose oxidase
Crystallization and Preliminary X-ray Diffraction Studies of a Deglycosylated Glucose Oxidase from *Penicillium amagasakiense*, **223**, 1167–1169.

Glutamate
Thermodynamic Stoichiometries of Participation of Water, Cations and Anions in Specific and Non-specific Binding of *lac* Repressor to DNA. Possible Thermodynamic Origins of the "Glutamate Effect" on Protein–DNA Interactions, **228**, 252–264.

Glutamate dehydrogenase
Effect of Additives on the Crystallization of Glutamate Dehydrogenase from *Clostridium symbiosum*. Evidence for a Ligand-induced Conformational Change, **224**, 1181–1184.

Glutaredoxin
Structure of Oxidized Bacteriophage T4 Glutaredoxin (Thioredoxin). Refinement of Native and Mutant Proteins, **228**, 596–618.

Glutathione
Crystallization and Preliminary X-ray Diffraction Studies of a Protective Cloned 28 kDa Glutathione S-transferase from *Schistosoma mansoni*, **224**, 515–518.

Glutathione reductase
Active Site of Trypanothione Reductase. A Target for Rational Drug Design, **227**, 322–333.

Glutathione S-transferase
Crystallization and Preliminary X-ray Diffraction Studies of a Protective Cloned 28 kDa Glutathione S-transferase from *Schistosoma mansoni*, **224**, 515–518.
Mutational Substitution of Residues Implicated by *Crystal Structure* in Binding the Substrate Glutathione to Human Glutathione S-transferase π, **226**, 319–322.
Three-dimensional Structure of Class π Glutathione S-Transferase from Human Placenta in Complex with S-Hexylglutathione at 2·8 Å Resolution, **227**, 214–226.

D-glycerate dehydrogenase
Crystallization and Preliminary Diffraction Studies of Hydroxypyruvate Reductase (D-Glycerate Dehydrogenase) from *Hyphomicrobium methylovorum*, **225**, 909–911.

Glycinamide ribonucleotide transformylase
Crystal Structure of Glycinamide Ribonucleotide Transformylase from *Escherichia coli* at 3·0 Å Resolution. A Target Enzyme for Chemotherapy, **227**, 283–292.

Glycosylation
Effects of Glycosylation on the Folding and Stability of Human, Recombinant and Cleaved α_1-Antitrypsin, **224**, 241–252.
Isoform Purification of Gastric Lipases. Towards Crystallization, **225**, 147–153.
Crystallization and Preliminary X-ray Diffraction Studies of a Peroxidase from Barley Grain, **228**, 690–692.

GMP Protein binding
Refined Structure of the Complex between Guanylate Kinase and its Substrate GMP at 2·0 Å Resolution, **224**, 1127–1141.

Golgi apparatus
Tetrahymena Gene Encodes a Protein that is Homologous with the Liver-specific F-antigen and Associated with Membranes of the Golgi Apparatus and Transport Vesicles, **228**, 850–861.

Gramicidin
Structure of an Isolated Gramicidin A Double Helical Species by High-resolution Nuclear Magnetic Resonance, **226**, 1101–1109.

Granulocyte-macrophage Colony-stimulating factor
Three-dimensional Structure of Recombinant Human Granulocyte-macrophage colony-stimulating Factor, **224**, 1075–1085.

GTP cyclohydrolase I
Crystallization and Preliminary Crystallographic Characterization of GTP Cyclohydrolase I from *Escherichia coli*, **226**, 1279–1281.

GTP protein binding
McrBC: a Multisubunit GTP-dependent Restriction Endonuclease, **225**, 327–348.

GTPase activity
GTPase Activity of Bacteriophage T4 Sheath Protein, **223**, 23–25.

Guanine
Newly Observed Binding Mode in Pancreatic Ribonuclease, **224**, 265–267.

Guanylate cyclase
From Adenylate Cyclase to Guanylate Cyclase. Mutational Analysis of a Change in Substrate Specificity, **225**, 933–938.

Guanylate kinase
Refined Structure of the Complex between Guanylate Kinase and its Substrate GMP at 2·0 Å Resolution, **224**, 1127–1141.

Haemoglobin
Haemoglobin of the Antarctic Fish *Pagothenia bernacchii*. Amino Acid Sequence, Oxygen Equilibria and Crystal Structure of its Carbonmonoxy Derivative, **224**, 449–460.

Halobacterium halobium
Three Different but Related Gene Clusters Encoding Gas Vesicles in Halophillic Archaea, **227**, 586–592.

Haloferax mediterranei
Three Different but Related Gene Clusters Encoding Gas Vesicles in Halophillic Archaea, **227**, 586–592.

HDEL receptor
Changing the Specificity of the Sorting Receptor for Luminal Endoplasmic Reticulum Proteins, **224**, 1–5.

Heat capacity
Thermodynamics of Unfolding of the α-Amylase Inhibitor Tendamistat. Correlations Between Accessible Surface Area and Heat Capacity, **223**, 769–779.
Contribution of Hydration and Non-covalent Interact to the Heat Capacity Effect on Protein Unfolding, 715–723.
Analysis of the Heat Capacity Dependence of Pro Folding, **227**, 889–900.

Heat shock
Promoter Sequence Containing $(CT)_n \cdot (GA)_n$ Repea Critical for the Formation of the DNase I Hyperse ive Sites in the *Drosophila hsp26* Gene, **225**, 985–9
The P-glycoprotein Gene Family of *Caenorhabditis eleg* Cloning and Characterization of Genomic and Com mentary DNA Sequences, **228**, 701–711.

Helicase
NAM7 Nuclear Gene Encodes a Novel Member Family of Helicases with a Zn-ligand Motif ar Involved in Mitochondrial Functions in *Saccharom cerevisiae*, **224**, 575–587.

Heme
Oxidation State-dependent Conformational Change Cytochrome *c*, **223**, 959–976.
σ-Aminolevulinate Couples *cycA* Transcription Changes in Heme Availability in *Rhodobacter sp oides*, **226**, 101–115.
X-ray *Crystal Structure* of Canine Myeloperoxidase a Resolution, **226**, 185–207.

Hemoglobin
Location of Potential Binding Sites on Deoxy H globin for the Design of Antigelling Agents, 791–800.
Haemoglobin of the Antarctic Fish *Pagothenia berna* Amino Acid Sequence, Oxygen Equilibria and Cr Structure of its Carbonmonoxy Derivative, 449–460.
Structure–Function Relationships in the Low-af Mutant Haemoglobin Aalborg (Gly74 (E18)$\beta \rightarrow$ **226**, 883–888.
X-ray Diffraction Study of Di and Tetra-ligated T Hemoglobin from High Salt Crystals, **227**, 480–4
Amino Acid Sequence of Yeast Hemoglobin. A domain Structure, **227**, 948–954.
High Resolution Crystal Structures and Comparisons State Deoxyhaemoglobin and Two Liganded T Haemoglobins T(α-oxy)Haemoglobin and T(met moglobin, **228**, 551–579.
A Myoglobin Evolved from Indoleamine 2,3-dioxyge **228**, 698–700.

Hemoglobin T-state
X-ray Diffraction Study of Di and Tetra-ligated T Hemoglobin from High Salt Crystals, **227**, 480–4

Heparin
Domain Structure and Domain–Domain Interactio the Carboxy-terminal Heparin Binding Region of nectin, **227**, 1182–1191.

Hepatitis B virus
Topological Analysis of the Hepatitis B Virus Particle by Cysteine–Cysteine Cross-linking, 1013–1025.

Hepatitis delta virus
Sequence and Structure of the Catalytic RNA of Hep Delta Virus Genomic RNA, **223**, 233–245.

β-hexosaminidase
Crystallization of Human β-Hexosaminidase B, 577–580.

High mobility group proteins
Nucleosome Core Binding Region of Chromosoma tein HMG-17 Acts as an Independent Func Domain, **228**, 442–449.

Hirudin
Binding of Hirudin to Human α, β and γ-Thromb Comparative Kinetic and Thermodynamic Study 177–184.
Modulation of Thrombin-Hirudin Interaction by S Ion Effects, **226**, 263–269.

Nuclear Magnetic Resonance Solution Structure of Hirudin(1-51) and Comparison with Corresponding Three-dimensional Structures Determined using the Complete 65-Residue Hirudin Polypeptide Chain, **228**, 1193–1205.

Impact of Protein–Protein Contacts on the Conformation of Thrombin-bound Hirudin Studied by Comparison with the Nuclear Magnetic Resonance Solution Structure of Hirudin(1-51), **228**, 1206–1211.

Crystallization and Preliminary X-ray Studies of the Liganded Lysine, Arginine, Ornithine-binding Protein from *Salmonella typhimurium*, **225**, 1123–1125.

compatibility complex

Crystallization of Murine Major Histocompatibility Complex Class I H-2K^b Single Peptides, **228**, 975–982.

ne

Site-directed Mutagenesis Studies on the Binding of the Globular Domain of Linker Histone H5 to the Nucleosome, **223**, 651–659.

Transcription Factor eUSF is an Essential Component of Isolated Transcription Complexes on the Duck Histone H5 Gene and it Mediates the Interaction of TFIID with a TATA-Deficient Promoter, **223**, 885–898.

Genes Encoding a Histone H3.3-like Variant in *Arabidopsis* Contain Invervening Sequences, **225**, 569–574.

Co-operative Binding of the Globular Domain of Histone H5 to DNA, **225**, 1105–1121.

gene

Cloning and Analysis of the Entire *Escherichia coli ams* Gene. *arms* is Identical to *hmpI* and Encodes a 114 kDa Protein that Migrates as a 180 kDa Protein, **228**, 30–40.

ene

Mechanism of Post-segregational Killing by the *hok/sok* System of Plasmid R1. Sok Antisense RNA Regulates *hok* Gene Expression Indirectly Through the Overlapping *mok* Gene, **223**, 41–54.

e leucocyte elastase inhibitor

Crystal Structure of Cleaved Equine Leucocyte Elastase Inhibitor Determined at 1·95 Å Resolution, **226**, 1207–1218.

an growth hormone

High Resolution Functional Analysis of Antibody–Antigen Interactions, **226**, 851–865.

an immunodeficency virus

Substitution of a Single Bacteriophage T3 Residue in Bacteriophage T7 RNA Polymerase at Position 748 Results in a Switch in Promoter Specificity, **228**, 506–515.

an immunodeficiency virus

Fidelity of Human Immunodeficiency Virus Type I Reverse Transcriptase in Copying Natural RNA, **223**, 595–600.

Preferential Interaction of Human Immunodeficiency Virus Reverse Transcriptase with Two Regions of Primer tRNA^{Lys} as Evidenced by Footprinting Studies and Inhibition with Synthetic Oligoribonucleotides, **226**, 1–6.

Kinking of RNA Helices by Bulged Bases, and the Structure of the Human Immunodeficiency Virus Transactivator Response Element, **226**, 305–310.

an Y chromosome

Structure of the Pericentric Long Arm Region of the Human Y Chromosome, **228**, 421–432.

ene

Nucleotide Sequence and Organization of an H_2-uptake Gene Cluster from *Rhizobium leguminosarum* bv. viciae Containing a Rubredoxin-like Gene and Four Additional Open Reading Frames, **228**, 998–1002.

Hydrogen exchange

Molecular Mechanism for Ligand Stabilization in the Mollusc Myoglobin Possessing the Distal Val Residue, **228**, 338–342.

Hydrogenase

Nucleotide Sequence and Organization of an H_2-uptake Gene Cluster from *Rhizobium leguminosarum* bv. viciae Containing a Rubredoxin-like Gene and Four Additional Open Reading Frames, **228**, 998–1002.

Hydrolase

Crystallization and Preliminary Crystallographic Data of a *Streptomyces scabies* Extracellular Esterase, **227**, 569–571.

Hydrophobic potential

Structure-derived Hydrophobic Potential. Hydrophobic Potential Derived from X-ray Structures of Globular Proteins is able to Identify Native Folds, **224**, 725–732.

Binding of an Antiviral Agent to a Sensitive and a Resistant Human Rhinovirus. Computer Simulation Studies with Sampling of Amino Acid Side-chain Conformations. I. Mapping the Rotamers of Residue 188 of Viral Protein 1, **225**, 679–696.

Hydroxylase

Crystallization and Preliminary X-ray Analysis of the Methane Monooxygenase Hydroxylase Protein from *Methylococcus capsulatus* (Bath), **227**, 583–585.

Hydroxypyruvate reductase

Crystallization and Preliminary Diffraction Studies of Hydroxypyruvate Reductase (D-Glycerate Dehydrogenase) from *Hyphomicrobium methylovorum*, **225**, 909–911.

Image analysis

Structural Data Suggest that the Active and Inactive Forms of the RecA Filament are not Simply Interconvertible, **227**, 334–346.

Structure of Striated Microtubule-associated Fibers of Flagellar Roots. Comparison of Native and Reconstituted States, **227**, 698–710.

Structural Basis for the Destabilization of F-Actin by Phosphate Release Following ATP Hydrolysis, **227**, 1043–1053.

Immunological screening

Simplified Methods for Construction, Assessment and Rapid Screening of Peptide Libraries in Bacteriophage, **227**, 711–718.

Immunosuppressive drug

Similarities and Differences between Human Cyclophilin A and Other β-Barrel Structures. Structural Refinement at 1·63 Å Resolution, **228**, 539–550.

***in situ* chemical probing**

Intramolecular dG·dG·dC Triplex Detected in *Escherichia coli* Cells, **223**, 817–822.

Indole-3-glycerol-phosphate synthase

Three-dimensional Structure of the Bifunctional Enzyme Phosphoribosylanthranilate Isomerase : Indoleglycerolphosphate Synthase from *Escherichia coli* Refined at 2·0 Å Resolution, **223**, 477–507.

Indoleamine dioxygenase

A Myoglobin Evolved from Indoleamine 2,3-dioxygenase, **228**, 698–700.

Insertin

Occurrence of an Actin-inserting Domain in Tensin, **227**, 593–594.

Insulin

Three-dimensional Solution Structure of an Insulin Dimer. A Study of the B9(Asp) Mutant of Human Insulin Using Nuclear Magnetic Resonance, Distance Geometry and Restrained Molecular Dynamics, **227**, 1146–1163.

Binding of the Dye Congo Red to the Amyloid Protein Pig Insulin Reveals a Novel Homology amongst Amyloid-forming Peptide Sequences, **227**, 1205–1223.
Role of B13 Glu in Insulin Assembly. The Hexamer Structure of Recombinant Mutant (B13 Glu→Gln) Insulin, **228**, 1163–1176.

Integration host factor
DNA Topology-mediated Regulation of *Transcription* Initiation from the Tandem Promoters of the *ilvG-MEDA* Operon of *Escherichia coli*, **224**, 919–935.
Supercoiling, Integration Host Factor, and a Dual Promoter System, Participate in the Control of the Bacteriophage α pL Promoter, **224**, 937–948.
Role of Integration Host Factor in Stimulating Transcription from the σ^{54}-dependent *nifH* Promoter, **227**, 602–620.
Stimulation of the Phage λ pL Promoter by Integration Host Factor Requires the Carboxy Terminus of the α-Subunit of RNA Polymerase, **227**, 985–990.
Positive and Negative Effects of DNA Bending on Activation of Transcription from a Distant Site, **227**, 996–1008.

Interleukin 1β
A 500 ps Molecular Dynamics Simulation Study of Interleukin-1β in Water. Correlation with Nuclear Magnetic Resonance Spectroscopy and Crystallography, **226**, 239–250.

Interleukin 4
Human Interleukin 4. The Solution *Structure* of a Four-helix Bundle Protein, **224**, 899–904.

Interleukin 8
Preliminary Crystallographic Analysis of Murine Macrophage Inflammatory Protein 2, **225**, 913–915.

Intermediate filament
Identification of a Nonapeptide Motif in the Vimentin Head Domain Involved in Intermediate Filament Assembly, **223**, 637–650.
Characterization of the Nucleic Acid-binding Activities of the Isolated Amino-terminal Head Domain of the Intermediate Filament Protein Vimentin Reveals its Close Relationship to the DNA-binding Regions of some Prokaryotic Single-stranded DNA-binding Proteins, **228**, 41–57.

Intracellular adhesion molecule-1
Preliminary X-ray *Crystallographic* Analysis of Intercellular Adhesion Molecule-1, **225**, 1127–1130.

Intron
Genes Encoding a Histone H3.3-like Variant in *Arabidopsis* Contain Invervening Sequences, **225**, 569–574.
Prediction of Gene Structure, **226**, 141–157.
Determination of Eukaryotic Protein Coding Regions Using *Neural Networks* and Information Theory, **226**, 471–479.
G + C-rich Tract in 5′ End of Human Introns, **227**, 108–113.
Numerous Group I Introns with Variable Distributions in the Ribosomal DNA of a Lichen Fungus, **228**, 315–321.
DNA Sequence Analysis of 66 kb of the Human MHC Class II Region Encoding a Cluster of Genes for Antigen Processing, **228**, 433–441.

Introns Group I
Numerous Group I Introns with Variable Distributions in the Ribosomal DNA of a Lichen Fungus, **228**, 315–321.

Ion channel
Crystal and Molecular *Structure* of Human Annexin V after Refinement. Implications for Structure, Membrane Binding and Ion Channel Formation of the Annexin Family of Proteins, **223**, 683–704.
Membrane Topology and Quaternary Structure of Cardiac Gap Junction Ion Channels, **223**, 929–947.

Ion pair
The Folding of an Enzyme. II. *Substructure* of Barnase and the Contribution of Different Interactions to Protein Stability, **224**, 783–804.
Towards an Understanding of the Arginine–Aspar Interaction, **226**, 251–262.

Iron binding protein
X-ray Solution Scattering Reveals Conformati Changes upon Iron Uptake in Lactoferrin, Serum Ovo-transferrins, **225**, 811–819.
Preliminary Crystallographic Analyses of the N-Term Lobe of Recombinant Human Serum Transferrin, 575–576.
Crystallization and Preliminary X-ray Crystallogra Studies of Rusticyanin from *Thiobacillus ferrooxid* **227**, 581–582.
Preliminary Crystallographic Studies of the Ar Terminal Half of Human Lactoferrin in Its I saturated and Iron-free forms, **228**, 973–974.

Iron–sulfur protein
Crystallization and Crystallographic Characterizatio the Iron–Sulfur containing DNA-repair Enzyme E nuclease III from *Escherichia coli*, **227**, 347–351.
Three-dimensional Structure of the High-potential I Sulfur Protein Isolated from the Purple Phototro Bacterium *Rhodocyclus tenuis* Determined and Re at 1·5 Å Resolution, **228**, 672–686.

Isomerase
Crystallization and Preliminary X-ray Diffraction St of Mitochondrial Short-chain Δ^3,Δ^2-Enoyl-CoA merase from Rat Liver, **224**, 273–275.

Isomeric forms
GTPase Activity of Bacteriophage T4 Sheath Pro **223**, 23–25.

Iterons
Genetic and Functional Analysis of the Basic Replic pPS10, a Plasmid Specific for *Pseudomonas* Isol from *Pseudomonas syringae patovar savastanoi*, 415–426.

KDEL Receptor
Sequence of a Second Human KDEL Receptor, 913–916.

Kinetics
Interdomain Salt Bridges Modulate Ligand-ind Domain Motion of the Sulfate Receptor Protei Active Transport, **223**, 27–30.
Conformational Interconversion in Protein Crystals, 207–215.
Antibody Framework Residues Affecting the Confo tion of the Hypervariable Loops, **224**, 487–500.
Binding of Hirudin to Human α, β and γ-Thrombi Comparative Kinetic and Thermodynamic Study, 177–184.
Temperature Dependence of the Kinetics of the U induced Dissociation of Human Pl α_2-Macroglobulin into Half-molecules. A Mini Rate at 15°C Indicates Hydrophobic Intera between the Subunits, **225**, 551–556.
How Lac Repressor Finds *lac* Operator *in Vitro*, 59–68.

***kla*A gene**
Inhibition of Bacteriophage λ Development by the Gene of Broad-Host-Range Plasmid RK2, 1054–1067.

α-lactalbumin
Absence of the Thermal Transition in Apo-α-Lactalb in the Molten Globule State. A Study by Differe Scanning Microcalorimetry, **228**, 347–350.

β-lactamase
Crystallization and Preliminary Crystallographic Da *Escherichia coli* TEM1 β-Lactamase, **223**, 377–380
Inhibition of β-Lactamase by Clavulanate. Trapped I mediates in Cryocrystallographic Studies, 1103–1113.

General Mutagenesis/Gene Expression Procedure for the Construction of Variant Immunoglobulin Domains in *Escherichia coli*. Production of the Bence-Jones Protein REI_v *via* Fusion to β-Lactamase, **228**, 351–358.

te dehydrogenase

Structure of a Ternary Complex of an Allosteric Lactate Dehydrogenase from *Bacillus stearothermophilus* at 2·5 Å Resolution, **223**, 317–335.

ferrin

Preliminary Crystallographic Studies of the Amino Terminal Half of Human Lactoferrin in Its Iron-saturated and Iron-free forms, **228**, 973–974.

transferrin

Crystallization and Preliminary X-ray Diffraction Study of *Lathyrus ochrus* Isolectin II Complexed to the Human Lactotransferrin N2 Fragment, **227**, 938–941.

hin

Characterization of a Conserved Carboxy-terminal Sequence in Secreted Proteins and a Motif Implicated in Extracellular Protein Interactions, **227**, 367–370.

i

Two Crystal Forms of the Lentil Lectin Diffract to High Resolution, **223**, 579–581.

Crystallization and Preliminary X-ray Diffraction Study of *Lathyrus ochrus* Isolectin II Complexed to the Human Lactotransferrin N2 Fragment, **227**, 938–941.

Analysis of Sequence Variation among Legume Lectins. A Ring of Hypervariable Residues Forms the Perimeter of the Carbohydrate-binding Site, **228**, 924–934.

i carbohydrate-binding sites

Analysis of Sequence Variation among Legume Lectins. A Ring of Hypervariable Residues Forms the Perimeter of the Carbohydrate-binding Site, **228**, 924–934.

i structural homology

Analysis of Sequence Variation among Legume Lectins. A Ring of Hypervariable Residues Forms the Perimeter of the Carbohydrate-binding Site, **228**, 924–934.

ene

Control of Segregation of Chromosomal DNA by Sex Factor F in *Escherichia coli*. Mutants of DNA Gyrase Subunit A Suppress *letD* (*ccdB*) Product Growth Inhibition, **225**, 39–52.

ıe aminopeptidase

Structure Determination and Refinement of Bovine Lens Leucine Aminopeptidase and its Complex with Bestatin, **224**, 113–140.

emia

The Rhombotin Gene Family Encode Related LIM-domain Proteins whose Differing Expression Suggests Multiple Roles in Mouse Development, **226**, 747–761.

protein

In Vitro Analysis of Mutant LexA Proteins with an Increased Rate of Specific Cleavage, **228**, 395–408.

In Vitro Analysis of Mutant LexA Proteins with an Increased Rate of Specific Cleavage, **228**, 395–408.

harvesting complex

Crystallization of the B800–820 Light-harvesting Complex from *Rhodopseudomonas acidophila*, Strain 7750, **224**, 527–528.

Isolation, Crystallization, Crystal Structure Analysis and Refinement of B-Phycoerythrin from the Red Alga *Porphyridium sordidum* at 2·2 Å Resolution, **228**, 935–950.

Purification and Crystallization of the Light Harvesting LH1 Complex from *Rhodobacter sphaeroides*, **228**, 1259–1262.

scattering

Pre-nucleation *Crystallization* Studies on Aminoacyl-tRNA Synthetases by Dynamic Light-scattering, **225**, 185–191.

lomain proteins

The Rhombotin Gene Family Encode Related LIM-domain Proteins whose Differing Expression Suggests Multiple Roles in Mouse Development, **226**, 747–761.

Linear dichroism

Structure of DNA–RecA Complexes Studied by Residue Differential Linear Dichroism and Fluorescence Spectroscopy for a Genetically Engineered RecA Protein, **226**, 1193–1205.

Lipase

Crystallization and Preliminary X-ray Study of a Lipase from *Pseudomonas glumae*, **224**, 281–282.

Isoform Purification of Gastric Lipases. Towards Crystallization, **225**, 147–153.

The Crystal Molecular Structure of the *Rhizomucor miehei* Triacylglyceride Lipase at 1·9 Å Resolution, **227**, 818–839.

Crystallization and Preliminary X-ray Crystallographic Analysis of Lipase from *Pseudomonas cepacia*, **227**, 1258–1262.

Lipid

Cubic Phases of Lipid-containing Systems. The Structure of Phase Q^{223} (Space Group $Pm3n$). An X-ray Scattering Study, **225**, 137–145.

Crystallization, Structure Determination and Least-squares Refinement to 1·75 Å Resolution of the Fatty-acid-binding Protein Isolated from *Manduca sexta* L., **228**, 208–219.

Lipocalin

Crystallization and Initial X-ray Analysis of the C_2-subunit of Crustacyanin, **224**, 283–284.

Lipoprotein

Sequence of Lamprey Vitellogenin. Implications for the Lipovitellin *Crystal Structure*, **226**, 903–907.

Liquid crystal

Liquid Crystallinity in Condensed Type I Collagen Solutions. A Clue to the Packing of Collagen in Extracellular Matrices, **224**, 861–873.

Luciferase

Crystallization of *Photobacterium leiognathi* Non-fluorescent Flavoprotein, an Unusual Flavoprotein with Limited Sequence Identity to Bacterial Luciferase, **224**, 523–526.

***lux*F gene**

Crystallization of *Photobacterium leiognathi* Non-fluorescent Flavoprotein, an Unusual Flavoprotein with Limited Sequence Identity to Bacterial Luciferase, **224**, 523–526.

Lyase

Crystallization and Preliminary X-ray Studies of the Pectate Lyase from *Bacillus subtilis*, **228**, 1255–1258.

Lymphoblast

Mutational Spectra in Human B-cells. Spontaneous, Oxygen and Hydrogen Peroxide-induced Mutations at the *hprt* Gene, **228**, 813–826.

Lysosomes

Purification and Crystallization of Human Cathepsin D, **226**, 555–557.

Human Liver Cathepsin D. Purification, Crystallization and Preliminary X-ray Diffraction Analysis of a Lysosomal Enzyme, **227**, 265–270.

Crystallization and Initial Crystallographic Results for Pepstatin A Inhibited Bovine Cathepsin D, **227**, 1265–1268.

Lysozyme

Crystallization of the Fab Fragments of Anti-peptide Monoclonal Antibodies and a Complex with Peptide, **223**, 381–382.

Antibody Framework Residues Affecting the Conformation of the Hypervariable Loops, **224**, 487–500.

Refinement of an Enzyme Complex with Inhibitor Bound at Partial Occupancy. Hen Egg-white Lysozyme and tri-*N*-acetylchitotriose at 1·75 Å Resolution, **224**, 613–628.

Internal Motional Averaging and Three-dimensional Structure Determination by Nuclear Magnetic Resonance, **224**, 1087–1101.

Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. I. Theory and Test by Simulated Diffraction Data, **225**, 457–475.
Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. II. Application to Human Lysozyme, **225**, 477–486.
^{1}H Nuclear Magnetic Resonance Studies of the Interaction of Urea with Hen Lysozyme. Origins of the Conformational Change Induced in Hen Lysozyme by *N*-Acetylglucosamine Oligosaccharides, **227**, 9–14.
Structure of a Hinge-bending T4 Lysozyme Mutant, Ile-3→Pro, **227**, 917–933.
Is the Bacteriophage Lambda Lysozyme an Evolutionary Link or a Hybrid between the C and V-type Lysozymes? Homology Analysis and Detection of the Catalytic Amino Acid Residues, **228**, 529–538.

Lytechinus variegatus
Nucleosome Arrays Inhibit Both Initiation and Elongation of Transcripts by Bacteriophage T7 RNA Polymerase, **223**, 67–78.

Macrophage inflammatory protein
Preliminary Crystallographic Analysis of Murine Macrophage Inflammatory Protein 2, **225**, 913–915.

Maize
α-Tubulin Gene Family of Maize (*Zea mays* L.). Evidence for Two Ancient α-Tubulin Genes in Plants, **227**, 81–96.
Tubulin Gene Expression in Maize (*Zea mays* L.). Change in Isotype Expression along the Developmental Axis of Seedling Root, **227**, 97–107.

Major histocompatibility complex
Crystallization of Murine Major Histocompatibility Complex Class I H-2K^b Single Peptides, **228**, 975–982.

Malic enzyme
Crystallization of the NAD-dependent Malic Enzyme from the Parasitic Nematode *Ascaris suum*, **226**, 565–569.

Maltodextrin receptor
Atomic Interactions in Protein–Carbohydrate Complexes. Tryptophan Residues in the Periplasmic Maltodextrin Receptor for Active Transport and Chemotaxis, **226**, 15–22.

Maltoporin
Two-dimensional *Crystals* of *Escherichia coli* Maltoporin and Their Interaction with the Maltose-binding Protein, **223**, 1155–1165.

Maltose-binding protein
Two-dimensional *Crystals* of *Escherichia coli* Maltoporin and Their Interaction with the Maltose-binding Protein, **223**, 1155–1165.

Mannitol transport
Crystallization of the A-Domain of the Mannitol Transport Protein Enzyme II^{mtl}, **228**, 310–312.

Marchantia polymorpha
Gene Organization Deduced from the Complete Sequence of Liverwort *Marchantia polymorpha* Mitochondrial DNA. Primitive Form of Plant Mitochondrial Genome, **223**, 1–7.

Mass spectrometry
Crystallization and Preliminary Crystallographic Data of Purple Acid Phosphatase from Red Kidney Bean, **224**, 511–513.
Crystallization and X-ray Examination of Bovine Adrenodoxin, **227**, 945–947.

***mcm* gene**
The *mcm2* Mutation of Yeast Affects Replication, Rather than Segregation or Amplification of the Two Micron Plasmid, **224**, 545–558.

Membrane protein
Crystal and Molecular *Structure* of Human Annexin V after Refinement. Implications for Structure, Membrane Binding and Ion Channel Formation of the Annexin Family of Proteins, **223**, 683–704.
Membrane Topology and Quaternary Structure of Ca... Gap Junction Ion Channels, **223**, 929–947.
Basis of Unique Red Cell Membrane Properties in He... tary Ovalocytosis, **223**, 949–958.
Two-dimensional *Crystals* of *Escherichia coli* Malto... and Their Interaction with the Maltose-binding ... tein, **223**, 1155–1165.
Biogenesis of Outer Membrane Protein PhoE of *Esc... chia coli*. Evidence for Multiple SecB-binding Sit... the Mature Portion of the PhoE Protein, **224**, 369–...
Electrostatic Calculations of the pK_a Values of Ioni... Groups in Bacteriorhodopsin, **224**, 473–486.
Crystallization of the B800–820 Light-harvesting Com... from *Rhodopseudomonas acidophila*, Strain 7750, ... 527–528.
Membrane Protein Spanning Segments as Export Sig... **224**, 539–543.
Refined Structure of the Pore-forming Domain of Coli... at 2·4 Å Resolution, **224**, 639–657.
X-ray Diffraction by Crystals of Beef ... Ubiquinol:Cytochrome *c* Oxidoreductase, ... 1161–1166.
Characterization of the F Plasmid Mating Aggreg... Gene *traN* and of a New F Transfer Region Locus... **225**, 299–311.
Membrane Protein Structure Prediction. Hydropho... Analysis and the Positive-inside Rule, **225**, 487–...
Structure of Porin Refined at 1·8 Å Resolution, ... 493–509.
Occurrence of an Actin-inserting Domain in Tensin ... 593–594.
M Ring, S Ring and Proximal Rod of the Flagellar ... Body of *Salmonella typhimurium* are Composed o... units of a Single Protein, FliF, **227**, 672–677.
Single Crystals of Bovine Heart Cytochrome *c* Oxid... Fully Oxidized Resting, Fully Reduced and CO-... Fully Reduced States Are Isomorphous with ... Other, **228**, 987–990.
Purification and Crystallization of the Light Harv... LH1 Complex from *Rhodobacter sphaeroides*, ... 1259–1262.

Mercury resistance
Synthesis and Degradation of the mRNA of the Tn... Operon, **225**, 251–259.

Messenger RNA
Importance of mRNA Folding and Start Codon A... ibility in the Expression of Genes in a Ribo... Protein Operon of *Escherichia coli*, **224**, 949–96...
Interdependence of *Translation*, *Transcription* and m... Degradation in the *lacZ* Gene, **226**, 581–596.
Translation Inhibition by an mRNA Coding ... Secondary Structure is Determined by Its Pro... to the *AUG* Initiation Codon, **226**, 609–621.
Association of AUUUA-binding Protein with A + ... mRNA during Nucleo-cytoplasmic Transport, ... 721–733.
RNA Processing Modulates the Expression of th... *DABC* Operon in *Pseudomonas aeruginosa*, ... 943–957.
Tetrahymena Gene Encodes a Protein that is Homo... with the Liver-specific F-antigen and Associate... Membranes of the Golgi Apparatus and Tra... Vesicles, **228**, 850–861.

Metallothionein-2
Comparison of the Solution Conformations of ... [Zn$_7$]-metallothionein-2 and [Cd$_7$]-metallothio... using Nuclear Magnetic Resonance Spectroscop... 433–443.

Methane monooxygenase
Crystallization and Preliminary X-ray Analysis ... Methane Monooxygenase Hydroxylase Protein ... *Methylococcus capsulatus* (Bath), **227**, 583–585.

Methanol dehydrogenase
Crystallization and Preliminary Crystallographic I... gation of Methanol Dehydrogenase from *Methyld... ium extorquens* AM1, **228**, 302–305.

hionine synthase
Crystallization and Preliminary X-ray Diffraction Studies of the Cobalamin-binding Domain of Methionine Synthase from *Escherichia coli*, **225**, 557–560.

hyl methanesulfonate
Base Alterations in Yeast Induced by Alkylating Agents with Differing Swain-Scott Substrate Constants, **223**, 617–626.

ethyltetrahydrofolate-homocysteine methyl transferase .C. 2.1.1.13)
Crystallization and Preliminary X-ray Diffraction Studies of the Cobalamin-binding Domain of Methionine Synthase from *Escherichia coli*, **225**, 557–560.

methylguanine
Structure-related Properties of the Mutagenic Lesion 6-*O*-Methylguanine in DNA, **228**, 1137–1146.

hylguanine methyltransferase
Structure-related Properties of the Mutagenic Lesion 6-*O*-Methylguanine in DNA, **228**, 1137–1146.

***hylococcus capsulatus* (Bath)**
Crystallization and Preliminary X-ray Analysis of the Methane Monooxygenase Hydroxylase Protein from *Methylococcus capsulatus* (Bath), **227**, 583–585.

***hylosinus trichosporium* OB3b**
Crystallization and Preliminary X-ray Analysis of the Methane Monooxygenase Hydroxylase Protein from *Methylococcus capsulatus* (Bath), **227**, 583–585.

hylotroph
Crystallization and Preliminary Diffraction Studies of Hydroxypyruvate Reductase (D-Glycerate Dehydrogenase) from *Hyphomicrobium methylovorum*, **225**, 909–911.

ellar
Cubic Phases of Lipid-containing Systems. The Structure of Phase Q^{223} (Space Group *P*m3n). An X-ray Scattering Study, **225**, 137–145.

romonospora viridifaciens
Crystallization and Preliminary Crystallographic Study of Neuraminidase from *Micromonospora viridifaciens*, **225**, 1135–1136.

rotubule
Low Resolution Structure of Microtubules in Solution. Synchrotron X-ray Scattering and Electron Microscopy of Taxol-induced Microtubules Assembled from Purified Tubulin in Comparison with Glycerol and MAP-induced Microtubules, **226**, 169–184.
Tubulin Gene Expression in Maize (*Zea mays* L.). Change in Isotype Expression along the Developmental Axis of Seedling Root, **227**, 97–107.
Site-directed Mutagenesis of the GTP-binding Domain of β-Tubulin, **227**, 307–321.

-clotting enzyme
Crystallization and Preliminary X-ray Diffraction Studies of Aspartic Proteinase from *Irpex lacteus*, **226**, 1291–1293.

***ibilis* antiviral protein**
Crystallization and Preliminary X-ray Crystallographic Analysis of *Mirabilis* Antiviral Protein, **226**, 281–283.

ochondria
Gene Organization Deduced from the Complete Sequence of Liverwort *Marchantia polymorpha* Mitochondrial DNA. Primitive Form of Plant Mitochondrial Genome, **223**, 1–7.
NAM7 Nuclear Gene Encodes a Novel Member of a Family of Helicases with a Zn-ligand Motif and is Involved in Mitochondrial Functions in *Saccharomyces cerevisiae*, **224**, 575–587.
Transcriptional Commitment of Mitochondrial RNA Polymerase from *Saccharomyces cerevisiae*, **226**, 335–347.
Single Crystals of Bovine Heart Cytochrome *c* Oxidase at Fully Oxidized Resting, Fully Reduced and CO-bound Fully Reduced States Are Isomorphous with Each Other, **228**, 987–990.

Molecular chaperone
Biogenesis of Outer Membrane Protein PhoE of *Escherichia coli*. Evidence for Multiple SecB-binding Sites in the Mature Portion of the PhoE Protein, **224**, 369–379.
Inhibition of Bacteriophage λ Development by the *klaA* Gene of Broad-Host-Range Plasmid RK2, **227**, 1054–1067.

Molecular dynamics
Investigations on the Dynamic Structures of Adenine-and Thymine-containing DNA, **223**, 455–476.
Molecular Dynamics Simulation of the DNA Triplex $d(TC)_5 \cdot d(GA)_5 \cdot d(C^+T)_5$, **223**, 519–529.
Supercoiled DNA Energetics and Dynamics by Computer Simulation, **223**, 1089–1119.
Molecular Dynamics Simulations of Helix Denaturation, **223**, 1121–1138.
Internal Motional Averaging and Three-dimensional Structure Determination by Nuclear Magnetic Resonance, **224**, 1087–1101.
The RNase T_1 Mutant Glu46Gln Binds the Inhibitors 2′GMP and 2′AMP at the 3′ Subsite, **225**, 533–542.
Binding of an Antiviral Agent to a Sensitive and a Resistant Human Rhinovirus. Computer Simulation Studies with Sampling of Amino Acid Side-chain Conformations. I. Mapping the Rotamers of Residue 188 of Viral Protein 1, **225**, 679–696.
Binding of an Antiviral Agent to a Sensitive and a Resistant Human Rhinovirus. Computer Simulation Studies with Sampling of Amino Acid Side-chain Conformations. II. Calculation of Free-energy Differences by Thermodynamic Integration, **225**, 697–712.
A 500 ps Molecular Dynamics Simulation Study of Interleukin-1β in Water. Correlation with Nuclear Magnetic Resonance Spectroscopy and Crystallography, **226**, 239–250.
Modeling of the Structure of Bacteriorhodopsin. A Molecular Dynamics Study, **226**, 837–850.
Thermal Motions of Surface α-Helices in the D-Galactose Chemosensory Receptor. Detection by Disulfide Trapping, **226**, 1219–1235.
Characterization of "Native" Apomyoglobin by Molecular Dynamics Simulation, **227**, 375–380.
Solution Structure of a DNA Octamer Containing the Pribnow Box *via* Restrained Molecular Dynamics Simulation with Distance and Torsion Angle Constraints Derived from Two-dimensional Nuclear Magnetic Resonance Spectral Fitting, **227**, 510–531.
Taming Cut-off Induced Arifacts in Molecular Dynamics Studies of Solvated Polypeptides. The Reaction Field Method, **228**, 909–923.

Molecular motors
Substructure of the Flagellar Basal Body of *Salmonella typhimurium*, **223**, 171–184.

mRNA
Control of Adenovirus Major Late Gene Expression at Multiple Levels, **225**, 287–298.
Messenger RNA Secondary Structure and Translational Coupling in the *Escherichia coli* Operon Encoding Translation Initiation Factor IF3 and the Ribosomal Proteins, L35 and L20, **228**, 366–386.

mRNA Alternative polyadenylation
Gene Structure of Human CD59 and Demonstration that Discrete mRNAs are Generated by Alternative Polya denylation, **227**, 971–976.

mRNA autoregulation
Messenger RNA Secondary Structure and Translational Coupling in the *Escherichia coli* Operon Encoding Translation Initiation Factor IF3 and the Ribosomal Proteins, L35 and L20, **228**, 366–386.

mRNA splicing
Complete Nucleotide Sequence and Structural Organization of Rat Cardiac Troponin T Gene. A Single Gene Generates Embryonic and Adult Isoforms *via* Develop ment Regulated Alternative Splicing, **227**, 1269–1276.

Multi-copper enzyme
Refined *Crystal Structure* of Ascorbate Oxidase at 1·9 Å Resolution, **224**, 179–205.

Multiple conformers
The Crystal Structure of the *Bacillus lentus* Alkaline Protease, Subtilisin BL, at 1·4 Å Resolution, **228**, 580–595.

Multiple drug resistance
Identification of Cryptic *lox* Sites in the Yeast Genome by Selection for Cre-mediated Chromosome Translocations that Confer Multiple Drug Resistance, **223**, 911–928.

Murine adenosine deaminase
Refined 2·5 Å Structure of Murine Adenosine Deaminase at pH 6·0, **226**, 917–921.

Murine EAE
Secretion of T Cell Receptor Fragments From Recombinant *Escherichia coli* Cells, **224**, 885–890.

Muscle
Transients in Orientation of a Fluorescent Cross-bridge Probe Following Photolysis of Caged Nucleotides in Skeletal Muscle Fibres, **223**, 185–203.
Electron Microscopy of the Actin–Myosin Head Complex in the Presence of ATP, **223**, 391–397.
Helical reconstruction of Frozen–Hydrated Scallop Myosin Filaments, **223**, 661–671.
X-ray Diffraction Studies on Oriented Gels of Vertebrate Smooth Muscle Thin Filaments, **224**, 65–76.
Autophosphorylating Protein Kinase Activity in Titin-like Arthropod Projectin, **224**, 287–292.
Structure of Tropomyosin at 9 Ångstroms Resolution, **227**, 441–452.
Insect Crossbridges, Relaxed by Spin-labeled Nucleotide, Show Well-ordered 90° State by X-ray Diffraction and Electron Microscopy, but Spectra of Electron Paramagnetic Resonance Probes Report Disorder, **227**, 678–697.
X-ray Structure Determination of Telokin, the C-terminal Domain of Myosin Light Chain Kinase, at 2·8 Å Resolution, **227**, 840–851.

Mutagenesis
N-Methyl-*N*-nitrosourea-induced Mutations in Human Cells. Effects of the Transcriptional Activity of the Target Gene, **223**, 587–594.
Spectrum of Spontaneously Occurring Mutations in the *hprt* Gene of V79 Chinese Hamster Cells, **223**, 627–635.
Mutagenicity of a Unique Apurinic/Apyrimidinic Site in Mammalian Cells, **227**, 981–984.
Modulation of Ultraviolet Light Mutational Hotspots by Cellular Stress, **228**, 1031–1036.

Mutagenesis computer simulation
Prediction of the Activity and Stability Effects of Site-directed Mutagenesis on a Protein Core, **227**, 389–395.

Mutation
Interdomain Salt Bridges Modulate Ligand-induced Domain Motion of the Sulfate Receptor Protein for Active Transport, **223**, 27–30.
Evolutionary Conservativeness of Electric Field in the Cu,Zn Superoxide Dismutase Active Site. Evidence for Co-ordinated Mutation of Charged Amino Acid Residues, **223**, 337–342.
N-Methyl-*N*-nitrosourea-induced Mutations in Human Cells. Effects of the Transcriptional Activity of the Target Gene, **223**, 587–594.
Base Alterations in Yeast Induced by Alkylating Agents with Differing Swain-Scott Substrate Constants, **223**, 617–626.
Spectrum of Spontaneously Occurring Mutations in the *hprt* Gene of V79 Chinese Hamster Cells, **223**, 627–635.
Identification of a Nonapeptide Motif in the Vimentin Head Domain Involved in Intermediate Filament Assembly, **223**, 637–650.
Genetical and Biochemical Evidence for the Involvement of the Coprotease Domain of *Escherichia coli* RecA Protein in Recombination, **223**, 823–829.
Two Independent Amsacrine-resistant Human Myelo Leukemia Cell Lines Share an Identical Point Mutation in the 170 kDa Form of Human Topoisomerase II, **223**, 837–843.
Isolation and Characterization of Mutant Bacteriopha T7 RNA Polymerases, **224**, 307–318.
Co-operative Interactions during Protein Folding, **22** 733–740.
Mutational Analysis of an Inherently Defective *Tran lation* Initiation Site, **224**, 1039–1054.
Molecular Analysis of *Saccharomyces cerevisiae* Chrom some I. On the Number of Genes and the Identificati of Essential Genes Using Temperature-sensitive-let Mutations, **225**, 53–65.
Mutagenesis of a Conserved Region of the Gene Encodi the FLP Recombinase of *Saccharomyces cerevisiae*. Role for Arginine 191 in Binding and Ligation, **22** 313–326.
Effect of Active Site Residues in Barnase on Activity a Stability, **225**, 585–589.
Molecular Interactions in Myosin Assembly: Role of t 28-Residue Charge Repeat in the Rod, **226**, 7–13.
Atomic Interactions in Protein–Carbohydrate Complex Tryptophan Residues in the Periplasmic Maltodextr Receptor for Active Transport and Chemotaxis, **22** 15–22.
Mutagenesis of the *Bacillus subtilis* "−12, −24" Promot of the Levanase Operon and Evidence for the Ex tence of an Upstream Activating Sequence, **226** 85–99.
Mutational Substitution of Residues Implicated by *Crystal Structure* in Binding the Substrate Glutathio to Human Glutathione S-transferase π, **226**, 319–32
Crystal Structures of two Mutant Neuraminidase–An body Complexes with Amino Acid Substitutions in t Interface, **227**, 149–159.
Mutagenicity of a Unique Apurinic/Apyrimidinic Site Mammalian Cells, **227**, 981–984.
Adenovirus VARNA1 Gene B Block Promoter Eleme Sequences Required for Transcription and for Int action with Transcription Factors, **227**, 1068–1085.
Structure of Oxidized Bacteriophage T4 Glutaredoxi (Thioredoxin). Refinement of Native and Mutant Pr teins, **228**, 596–618.
Mutational Spectra in Human B-cells. Spontaneous, Ox gen and Hydrogen Peroxide-induced Mutations at t *hprt* Gene, **228**, 813–826.
Modulation of Ultraviolet Light Mutational Hotspots Cellular Stress, **228**, 1031–1036.

Myelin
Order–Disorder Phenomena in Myelinated Nerve Sheath IV. The Disordering Effects of High Levels of Lo Anaesthetics on Rat Sciatic and Optic Nerves, **22** 535–548.

Myeloperoxidase
X-ray *Crystal Structure* of Canine Myeloperoxidase at 3 Resolution, **226**, 185–207.

Myoglobin
Conformational Interconversion in Protein Crystals, **22** 207–215.
Solution ^{1}H *Nuclear Magnetic Resonance* Determination Hydrogen Bonding of the E10 (66) Arg Side-chain the Bound Ligand in *Aplysia* Cyano-met Myoglobi **224**, 891–897.
Characterization of "Native" Apomyoglobin by Molecul Dynamics Simulation, **227**, 375–380.
Molecular Mechanism for Ligand Stabilization in the M lusc Myoglobin Possessing the Distal Val Residue, **22** 338–342.
A Myoglobin Evolved from Indoleamine 2,3-dioxygenas **228**, 698–700.

Myohemerythrin
Folding of Peptide Fragments Comprising the Comple Sequence of Proteins. Models for Initiation of Prote Folding I. Myohemerythrin, **226**, 795–817.

sin
Gene Conversions Within the Skeletal Myosin Multigene Family, **223**, 383–387.
Helical reconstruction of Frozen–Hydrated Scallop Myosin Filaments, **223**, 661–671.
Temperature Dependence and Arrhenius Activation Energy of F-actin Velocity Generated *in Vitro* by Skeletal *Myosin*, **224**, 1029–1038.
Cloning of the cDNA Encoding a Neuronal Myosin Heavy Chain from Mammalian Brain and its Differential Expression within the Central Nervous System, **224**, 1185–1193.
Analysis of the Chicken Fast Myosin Heavy Chain Family. Localization of Isoform-specific Antibody Epitopes and Regions of Divergence, **225**, 1143–1151.
Molecular Interactions in Myosin Assembly: Role of the 28-Residue Charge Repeat in the Rod, **226**, 7–13.
Cloning and Analysis of the Entire *Escherichia coli ams* Gene. *arms* is Identical to *hmp1* and Encodes a 114 kDa Protein that Migrates as a 180 kDa Protein, **228**, 30–40.
Structure of the Myosin Filaments of Relaxed and Rigor Vertebrate Striated Muscle Studied by Rapid Freezing Electron Microscopy, **228**, 474–487.

sin light chain kinase
X-ray Structure Determination of Telokin, the C-terminal Domain of Myosin Light Chain Kinase, at 2·8 Å Resolution, **227**, 840–851.

otein
Direct Interaction Between Two *Escherichia coli Transcription* Antitermination Factors, NusB and Ribosomal Protein S10, **223**, 55–66.

DH oxidase/peroxidase
Molecular Cloning and Analysis of the Gene Encoding the NADH Oxidase from *Streptococcus faecalis* 10C1. Comparison with NADH Peroxidase and the Flavoprotein Disulfide Reductases, **227**, 658–671.

DH:ubiquinone oxidoreductase
Sequences of 20 Subunits of NADH:Ubiquinone Oxidoreductase from Bovine Heart Mitochondria. Application of a Novel Strategy for Sequencing Proteins Using the Polymerase Chain Reaction, **226**, 1051–1072.

arzinostatin
Three-dimensional *Solution Structure* of Apo-neocarzinostatin, **225**, 125–135.

al network
Predicting Protein Secondary Structure Using Neural Net and Statistical Methods, **225**, 363–377.
Predicting Protein Secondary Structure Content. A Tandem Neural Network Approach, **225**, 713–727.
A Hybrid System for Protein Secondary *Structure Prediction*, **225**, 1049–1063.
Determination of Eukaryotic Protein Coding Regions Using *Neural Networks* and Information Theory, **226**, 471–479.
G + C-rich Tract in 5′ End of Human Introns, **227**, 108–113.
Predicting Protein Secondary Structure with a Nearest-neighbor Algorithm, **227**, 371–374.
Recognition of Distantly Related Protein Sequences Using Conserved Motifs and Neural Networks, **228**, 951–962.

aminidase
Crystallization and Preliminary Crystallographic Study of Neuraminidase from *Micromonospora viridifaciens*, **225**, 1135–1136.
Purification, *Crystallization* and Preliminary Crystallographic Study of Neuraminidase from *Vibrio cholerae* and *Salmonella typhimurium* LT2, **226**, 1287–1290.
Refined Crystal Structure of the Influenza Virus N9 Neuraminidase–NC41 Fab Complex, **227**, 122–148.

Neurospora crassa
Characterization of Assembly Intermediates of NADH : Ubiquinone Oxidoreductase (Complex I) Accumulated in *Neurospora* Mitochondria by Gene Disruption, **227**, 1032–1042.

Neurotoxin
Crystallization of κ-Bungarotoxin: Preliminary X-ray Data Obtained from the Venom-derived Protein, **226**, 559–562.
Nuclear Magnetic Resonance Solution Structure of the α-Neurotoxin from the Black Mamba (*Dendroaspis polylepis polylepis*), **227**, 1118–1135.

Neutron diffraction
A Neutron Solution Scattering Study of the *Structure* of Annexin-V and its Binding to Lipid Vesicles, **226**, 1271–1278.

Nickel
Preliminary Crystallographic Studies of Urease from Jack Bean and from *Klebsiella aerogenes*, **227**, 934–937.

***nif*A protein**
Role of Integration Host Factor in Stimulating Transcription from the σ^{54}-dependent *nifH* Promoter, **227**, 602–620.

Nitrate reductase
Crystallization and Preliminary Crystallographic Studies of the FAD Domain of Corn NADH:Nitrate Reductase, **224**, 277–279.

Nitrogen fixation
Role of Integration Host Factor in Stimulating Transcription from the σ^{54}-dependent *nifH* Promoter, **227**, 602–620.

Nuclear magnetic resonance
GTPase Activity of Bacteriophage T4 Sheath Protein, **223**, 23–25.
Refined Solution Structure and Ligand-binding Properties of PDC-109 Domain b. A Collagen-binding Type II Domain, **223**, 281–298.
Computing the Geometry of a Molecule in Dihedral Angle Space Using n.m.r.-derived Constraints. A New Algorithm Based on Optimal Filtering, **223**, 299–315.
Determination of the Nuclear Magnetic Resonance Solution Structure of the DNA-binding Domain (Residues 1 to 69) of the 434 Repressor and Comparison with the X-ray Crystal Structure, **223**, 743–767.
Localization of Bound Water in the Solution Structure of the Immunoglobulin Binding Domain of Streptococcal Protein G. Evidence for Solvent-induced Helical Distortion in Solution, **223**, 853–856.
Three-dimensional Structure of Acylphosphatase. Refinement and *Structure* Analysis, **224**, 427–440.
Probing Protein Structure by Solvent Perturbation of *Nuclear Magnetic Resonance* Spectra. Nuclear Magnetic Resonance Spectral Editing and Topological Mapping in Proteins by Paramagnetic Relaxation Filtering, **224**, 659–670.
An N-terminal Fragment of Barnase has Residual Helical Structure Similar to that in a Refolding Intermediate, **224**, 749–758.
Solution ^{1}H *Nuclear Magnetic Resonance* Determination of Hydrogen Bonding of the E10 (66) Arg Side-chain to the Bound Ligand in *Aplysia* Cyano-met Myoglobin, **224**, 891–897.
Human Interleukin 4. The Solution *Structure* of a Four-helix Bundle Protein, **224**, 899–904.
Kinetic Roles and Conformational Properties of the Non-native Two-disulphide Intermediates in the Refolding of Bovine Pancreatic Trypsin Inhibitor, **224**, 905–911.
Improving the Antigen Affinity of an Antibody Fv-fragment by Protein Design, **224**, 913–918.
Internal Motional Averaging and Three-dimensional Structure Determination by Nuclear Magnetic Resonance, **224**, 1087–1101.
Nuclear Magnetic Resonance and Circular Dichroism Studies of a Triple-helical Peptide with a Glycine Substitution, **225**, 1–4.

Three-dimensional *Solution Structure* of Apo-neocarzinostatin, **225**, 125–135.

Comparison of the Solution Conformations of Human [Zn_7]-metallothionein-2 and [Cd]$_7$metallothionein-2 using Nuclear Magnetic Resonance Spectroscopy, **225**, 433–443.

Proton *Nuclear Magnetic Resonance* Assignments and Structural Characterization of an Intramolecular DNA Triplex, **225**, 755–773.

Solution Structure of the Fibrin Binding Finger Domain of Tissue-type Plasminogen Activator Determined by ^{1}H Nuclear Magnetic Resonance, **225**, 821–833.

Identification of a Protein-binding Surface by Differential Amide Hydrogen-exchange Measurements. Application to bowman-Birk serine-protease Inhibitor, **225**, 873–889.

A 500 ps Molecular Dynamics Simulation Study of Interleukin-1β in Water. Correlation with Nuclear Magnetic Resonance Spectroscopy and Crystallography, **226**, 239–250.

Nuclear Magnetic Resonance Detection of Bound Water Molecules in the Active Site of *Lactobacillus casei* Dihydrofolate Reductase in Aqueous Solution, **226**, 549–554.

Folding of Peptide Fragments Comprising the Complete Sequence of Proteins. Models for Initiation of Protein Folding I. Myohemerythrin, **226**, 795–817.

Folding of Peptide Fragments Comprising the Complete Sequence of Proteins. Models for Initiation of Protein Folding II. Plastocyanin, **226**, 819–835.

Structure of an Isolated Gramicidin A Double Helical Species by High-resolution Nuclear Magnetic Resonance, **226**, 1101–1109.

Three-dimensional *Structure* in Solution of Acyl-coenzyme A Binding Protein from Bovine Liver, **226**, 1131–1141.

^{1}H Nuclear Magnetic Resonance Studies of the Interaction of Urea with Hen Lysozyme. Origins of the Conformational Change Induced in Hen Lysozyme by *N*-Acetylglucosamine Oligosaccharides, **227**, 9–14.

Human Epidermal Growth Factor. High Resolution Solution Structure and Comparison with Human Transforming Growth Factor α, **227**, 271–282.

Solution Structure of a DNA Octamer Containing the Pribnow Box *via* Restrained Molecular Dynamics Simulation with Distance and Torsion Angle Constraints Derived from Two-dimensional Nuclear Magnetic Resonance Spectral Fitting, **227**, 510–531.

Determination of a High-quality Nuclear Magnetic Resonance Solution Structure of the Bovine Pancreatic Trypsin Inhibitor and Comparison with Three Crystal Structures, **227**, 757–775.

The Fine Structure of Two DNA Dodecamers Containing the cAMP Responsive Element Sequence and Its Inverse. Nuclear Magnetic Resonance and Molecular Simulation Studies, **227**, 852–875.

Nuclear Magnetic Resonance Studies of the Internal Dynamics in Apo, $(Cd^{2+})_1$ and $(Ca^{2+})_2$ Calbindin D_{9k}. The Rates of Amide Proton Exchange with Solvent, **227**, 1100–1117.

Three-dimensional Solution Structure of an Insulin Dimer. A Study of the B9(Asp) Mutant of Human Insulin Using Nuclear Magnetic Resonance, Distance Geometry and Restrained Molecular Dynamics, **227**, 1146–1163.

Fluorine-19 Nuclear Magnetic Resonance as a Probe of the Solution Structure of Mutants of 5-Fluorouracil-substituted *Escherichia coli* Valine tRNA, **227**, 1164–1172.

Correlations Between Fluorine-19 Nuclear Magnetic Resonance Chemical Shift and the Secondary and Tertiary Structure of 5-Fluorouracil-substituted tRNA, **227**, 1173–1181.

Solution Structure of [d(GCGTATACGC)]$_2$, **228**, 118–

An Accurate Method for Determining the Helical Re of DNA in Solution Reveals Differences to the Cr Structures of Two B-DNA Decamers, **228**, 322–3

Molecular Mechanism for Ligand Stabilization in the lusc Myoglobin Possessing the Distal Val Residue, 338–342.

A Peptide Model for Proline Isomerism in the Unfo State of Staphylococcal Nuclease, **228**, 343–346.

Base Pairing Geometry in GA Mismatches Depe Entirely on the Neighboring Sequence, **22** 1037–1041.

Nuclear Magnetic Resonance Solution Structure of I din(1-51) and Comparison with Corresponding T dimensional Structures Determined using the plete 65-Residue Hirudin Polypeptide Chain, **2** 1193–1205.

Impact of Protein–Protein Contacts on the Conform of Thrombin-bound Hirudin Studied by Compa with the Nuclear Magnetic Resonance Solution S ture of Hirudin(1-51), **228**, 1206–1211.

Determination of the Solution Structures of Domai and III of Protein G from *Streptococcus* by ^{1}H Nu Magnetic Resonance, **228**, 1219–1234.

Secondary Structure Changes Stabilize the Rea centre Cleaved Form of SERPINs. A Study b Nuclear Magnetic Resonance and Fourier Trans Infrared Spectroscopies, **228**, 1235–1254.

Nuclear magnetic resonance ^{19}F

Fluorine-19 Nuclear Magnetic Resonance as a Pro the Solution Structure of Mutants of 5-Fluorou substituted *Escherichia coli* Valine tRNA, **2** 1164–1172.

Correlations Between Fluorine-19 Nuclear Magn Resonance Chemical Shift and the Secondary Tertiary Structure of 5-Fluorouracil-substitu tRNA, **227**, 1173–1181.

Nuclear magnetic resonance 3D

Localization of Bound Water in the Solution Struct the Immunoglobulin Binding Domain of Streptoc Protein G. Evidence for Solvent-induced Helica tortion in Solution, **223**, 853–856.

3D Nuclear magnetic resonance

Homonuclear Three-dimensional NOE–NOE Nuc Magnetic Resonance Spectra for Structure Deter tion of Proteins in Solution, **228**, 156–169.

Nuclear magnetic resonance distance geometry

Computing the Geometry of a Molecule in Dihedral Space Using n.m.r.-derived Constraints. A New rithm Based on Optimal Filtering, **223**, 299–315

Determination of the Nuclear Magnetic Resonance tion Structure of the DNA-binding Domain (Re 1 to 69) of the 434 Repressor and Comparison wi X-ray Crystal Structure, **223**, 743–767.

Structure of an Isolated Gramicidin A Double H Species by High-resolution Nuclear Magnetic R ance, **226**, 1101–1109.

Nuclear Magnetic Resonance Solution Structure α-Neurotoxin from the Black Mamba (*Dendroaspis polylepis polylepis*), **227**, 1118–1135.

Nuclear magnetic resonance methyl rotation

Internal Motional Averaging and Three-dimens Structure Determination by Nuclear Magnetic R ance, **224**, 1087–1101.

Nuclear Magnetic Resonance nuclear Overhauser eff

Three-dimensional *Structure* in Solution of Acyl-coen A Binding Protein from Bovine Liver, **226**, 1131–

ear Magnetic Resonance nuclear overhauser effects
Solution Structure of a DNA Octamer Containing the Pribnow Box *via* Restrained Molecular Dynamics Simulation with Distance and Torsion Angle Constraints Derived from Two-dimensional Nuclear Magnetic Resonance Spectral Fitting, **227**, 510–531.

ear magnetic resonance spectroscopy
Adjacent Zinc-finger Motifs in Multiple Zinc-finger Peptides from SWI5 Form Structurally Independent, Flexibly Linked Domains, **228**, 619–636.
Solution Structures of Two Zinc-finger Domains from SWI5 Obtained Using Two-dimensional ^{1}H Nuclear Magnetic Resonance Spectroscopy. A Zinc-finger Structure with a Third Strand of β-Sheet, **228**, 637–651.

ear magnetic resonance structure refinement
Determination of a High-quality Nuclear Magnetic Resonance Solution Structure of the Bovine Pancreatic Trypsin Inhibitor and Comparison with Three Crystal Structures, **227**, 757–775.

ear magnetic resonance TEMPOL
Probing Protein Structure by Solvent Perturbation of *Nuclear Magnetic Resonance* Spectra. Nuclear Magnetic Resonance Spectral Editing and Topological Mapping in Proteins by Paramagnetic Relaxation Filtering, **224**, 659–670.

eocapsid assembly
Topological Analysis of the Hepatitis B Virus Core Particle by Cysteine–Cysteine Cross-linking, **225**, 1013–1025.

eo-cytoplasmic transport
Association of AUUUA-binding Protein with A + U-rich mRNA during Nucleo-cytoplasmic Transport, **226**, 721–733.

eosome
Nucleosome Arrays Inhibit Both Initiation and Elongation of Transcripts by Bacteriophage T7 RNA Polymerase, **223**, 67–78.
Site-directed Mutagenesis Studies on the Binding of the Globular Domain of Linker Histone H5 to the Nucleosome, **223**, 651–659.
Comparison of *X-ray Structures* of the Nucleosome Core Particle in Two Different Hydration States, **224**, 253–264.
Chromatin Reconstitution on Small DNA Rings. IV. DNA Supercoiling and Nucleosome Sequence Preference, **224**, 981–1001.
Chromatin Structure of *Schizosaccharomyces pombe*. A Nucleosome Repeat Length that is Shorter than the Chromatosomal DNA Length, **226**, 1009–1025.
Chromatin Reconstitution on Small DNA Rings. V. DNA Thermal Flexibility of Single Nucleosomes, **228**, 327–337.
Nucleosome Core Binding Region of Chromosomal Protein HMG-17 Acts as an Independent Functional Domain, **228**, 442–449.

rotein
Stability of Coliphage λ DNA Replication Initiator, the λO Protein, **226**, 675–680.

tella sinensis
Chloroplast ATPase Genes in the Diatom *Odontella sinensis* Reflect Cyanobacterial Characters in Structure and Arrangement, **224**, 529–536.

rboxylate inhibitors
Crystal Structure of the Complex between Carboxypeptidase A and the Biproduct Analog Inhibitor L-Benzylsuccinate at 2·0 Å Resolution, **223**, 573–578.

itor *carAB*
Characterization of the Arginine Repressor from *Salmonella typhimurium* and its Interactions with the *carAB* Operator, **225**, 11–24.

operator *lac*
Interlocking of Plasmid DNAs due to *Lac* Repressor–Operator Interaction, **228**, 1104–1114.

Operon
Dissociation of a Native Dimer to a Molten Globule Monomer. Effects of Pressure and Dilution on the Association Equilibrium of Arc Repressor, **223**, 545–555.
Regulation of Open Complex Formation at the *Escherichia coli* Galactose Operon Promoters. Simultaneous Interaction of RNA Polymerase, *gal* Repressor and CAP/cAMP, **224**, 15–29.
Repression of the *araBAD* Promoter from $araO_1$, **224**, 335–341.
How Lac Repressor Finds *lac* Operator *in Vitro*, **226**, 59–68.
Isorepressor of the *gal* Regulon in *Escherichia coli*, **226**, 69–83.
RNA Processing Modulates the Expression of the *arcDABC* Operon in *Pseudomonas aeruginosa*, **226**, 943–957.
Three Different but Related Gene Clusters Encoding Gas Vesicles in Halophillic Archaea, **227**, 586–592.
Messenger RNA Secondary Structure and Translational Coupling in the *Escherichia coli* Operon Encoding Translation Initiation Factor IF3 and the Ribosomal Proteins, L35 and L20, **228**, 366–386.

Operon acetate
Specific Interactions Between the IclR Repressor of the Acetate Operon of *Escherichia coli* and its Operator, **228**, 23–29.

Optic nerve
Order–Disorder Phenomena in Myelinated Nerve Sheaths. IV. The Disordering Effects of High Levels of Local Anaesthetics on Rat Sciatic and Optic Nerves, **226**, 535–548.

Ornithine-binding protein
Crystallization and Preliminary X-ray Studies of the Liganded Lysine, Arginine, Ornithine-binding Protein from *Salmonella typhimurium*, **225**, 1123–1125.

Osmium tetroxide
Direct Evidence for the Effect of *Transcription* on Local DNA Supercoiling *in Vivo*, **223**, 131–144.

Ovalocytosis
Basis of Unique Red Cell Membrane Properties in Hereditary Ovalocytosis, **223**, 949–958.

β-oxidation
Crystallization and Preliminary X-ray Diffraction Studies of Mitochondrial Short-chain Δ^3,Δ^2-Enoyl-CoA Isomerase from Rat Liver, **224**, 273–275.

Oxidoreductase
Crystallization and Preliminary Crystallographic Investigation of Methanol Dehydrogenase from *Methylobacterium extorquens* AM1, **228**, 302–305.
GMC Oxidoreductases. A Newly Defined Family of Homologous Proteins Diverse Catalytic Activities, **223**, 811–814.

Oxygen
Structure–Function Relationships in the Low-affinity Mutant Haemoglobin Aalborg (Gly74 (E18)$\beta\rightarrow$Arg), **226**, 883–888.
High Resolution Crystal Structures and Comparisons of T-State Deoxyhaemoglobin and Two Liganded T-State Haemoglobins T(α-oxy)Haemoglobin and T(met)Haemoglobin, **228**, 551–579.
Mutational Spectra in Human B-cells. Spontaneous, Oxygen and Hydrogen Peroxide-induced Mutations at the *hprt* Gene, **228**, 813–826.

Pancreatic secretory trypsin inhibitor
Three-dimensional Structure of a Recombinant Variant of Human Pancreatic Secretory Trypsin Inhibitor (Kazal Type), **225**, 1095–1103.

Pancreatic spasmolytic polypeptide
Crystallization and Preliminary X-ray Diffraction Studies of Pancreatic Spasmolytic Polypeptide, **228**, 991–994.

Papillomavirus
Rolling-circle Replication of a High-copy BPV-1 Plasmid, **228**, 1–6.

Paramecium primaurelia
A High Degree of Macronuclear Chromosome Polymorphism is Generated by Variable DNA Rearrangements in *Paramecium primaurelia* during Macronuclear Differentiation, **225**, 661–678.

Parasitic nematode
Crystallization of the NAD-dependent Malic Enzyme from the Parasitic Nematode *Ascaris suum*, **226**, 565–569.

Parvalbumin
Crystal Structure of the Unique Parvalbumin Component from Muscle of the Leopard Shark (*Triakis semifasciata*). The First X-ray Study of an α-Parvalbumin, **223**, 705–720.

P-element transformation
Minigene Rescues Acetylcholinesterase Lethal Mutations in *Drosophila melanogaster*, **223**, 17–22.

Penicillinase
Inhibition of β-Lactamase by Clavulanate. Trapped Intermediates in Cryocrystallographic Studies, **224**, 1103–1113.

Penicillium amagasakiense
Crystallization and Preliminary X-ray Diffraction Studies of a Deglycosylated Glucose Oxidase from *Penicillium amagasakiense*, **223**, 1167–1169.

PEP-dependent phosphotransferase
Positive Regulation of the Expression of the *Escherichia coli pts* Operon. Identification of the Regulatory Regions, **226**, 623–635.

Pepstatin
Crystallization and Initial Crystallographic Results for Pepstatin A Inhibited Bovine Cathepsin D, **227**, 1265–1268.

Peptide analogues
Substitutions of Hydrophobic Amino Acids Reduce the Amyloidogenicity of Alzheimer's Disease βA4 Peptides, **228**, 460–473.

Peptide antibodies
Membrane Topology and Quaternary Structure of Cardiac Gap Junction Ion Channels, **223**, 929–947.

Peptide antigen
Crystallization of the Fab Fragments of Anti-peptide Monoclonal Antibodies and a Complex with Peptide, **223**, 381–382.

***cis*-peptide**
Crystal Structure Analysis, Refinement and Enzymatic Reaction Mechanism of *N*-Carbamoylsarcosine Amidohydrolase from *Arthrobacter sp.* at 2·0 Å Resolution, **226**, 1111–1130.

Peptide complex
Crystallization of Murine Major Histocompatibility Complex Class I H-2K^b Single Peptides, **228**, 975–982.

Peptide conformation
Folding of Peptide Fragments Comprising the Complete Sequence of Proteins. Models for Initiation of Protein Folding I. Myohemerythrin, **226**, 795–817.
Folding of Peptide Fragments Comprising the Complete Sequence of Proteins. Models for Initiation of Protein Folding II. Plastocyanin, **226**, 819–835.

Peptide library
Simplified Methods for Construction, Assessment and Rapid Screening of Peptide Libraries in Bacteriophage, **227**, 711–718.

Peptide triple helix
Nuclear Magnetic Resonance and Circular Dichroism Studies of a Triple-helical Peptide with a Glycine Substitution, **225**, 1–4.

β-peptide
Solution Conformations and Aggregational Properties of Synthetic Amyloid β-Peptides of Alzheimer's Disease Analysis of Circular Dichroism Spectra, 1075–1093.

Periplasm
Crystallization and Preliminary X-ray Studies of Liganded Lysine, Arginine, Ornithine-binding Protein from *Salmonella typhimurium*, **225**, 1123–1125.
Crystallization and Preliminary X-ray Studies on the repressor Binding Domain of the *Escherichia coli* Lactose Repressor, **225**, 1131–1133.
Ribose and Glucose–Galactose Receptors. Competitors in Bacterial Chemotaxis, **227**, 418–440.

Permease *lac*
Membrane Protein Spanning Segments as Export Signals, **224**, 539–543.

P-glycoproteins
The P-glycoprotein Gene Family of *Caenorhabditis elegans*. Cloning and Characterization of Genomic and Complementary DNA Sequences, **228**, 701–711.

Pyridoxal-5′-phosphate
Crystallization and Preliminary X-ray Analysis of Pig Kidney DOPA Decarboxylase, **224**, 1167–1170.

Phosphoglycerate kinase
Purification, Crystallization and Preliminary X-ray Analysis of the 3-phosphoglycerate Kinase from *Bacillus stearothermophilus*, **227**, 1263–1264.

Phospholipase C
Crystal Structures of Phosphate, Iodide and Iodosobenzoate inhibited Phospholipase C from *Bacillus cereus*: Structural Investigations of the Binding of Reaction Products and a Substrate Analogue, **225**, 543–549.

Phospholipid
Crystallographic Data for the 9000 Dalton Wheat Lipid specific Phospholipid Transfer Protein, **226**, 563–8.
A Neutron Solution Scattering Study of the *Structure* of Annexin-V and its Binding to Lipid Vesicles, 1271–1278.

Phosphoribosylaminoimidazolesuccinocarboxamide synthase
Crystallization and Preliminary X-ray Investigation of Phosphoribosylaminoimidazolesuccinocarboxamide Synthase from the Yeast *Saccharomyces cerevisiae*, 298–299.

***N*-(5′-phosphoribosyl)anthranilate isomerase**
Three-dimensional Structure of the Bifunctional Enzyme Phosphoribosylanthranilate Isomerase : Indoleglycerolphosphate Synthase from *Escherichia coli* Refined at 2·0 Å Resolution, **223**, 477–507.

Phosphorothioate
Analysis of the Role of Phosphate Oxygens in the Group I Intron from *Tetrahymena*, **228**, 743–758.

Phosphotransferase
Crystallization of the A-Domain of the Mannitol Transport Protein Enzyme II^{mtl}, **228**, 310–312.

Photosynthesis
Small Single-copy Region of Plastid DNA in the photosynthetic Angiosperm *Epifagus virginiana* Contains Only Two Genes. Differences Among Dicots, Monocots and Bryophytes in Gene Organization and Non-bioenergetic Locus, **223**, 95–104.

Phycoerythrin
Isolation, Crystallization, Crystal Structure Analysis and Refinement of B-Phycoerythrin from the Red *Porphyridium sordidum* at 2·2 Å Resolution, 935–950.

Picornaviruses
Model for the Differential Stabilities of Rhinovirus and Poliovirus to Mild Acidic pH, Based on Electrostatic Calculations, **223**, 247–257.

Pili
Helical Structure of P Pili from *Escherichia coli*. Evidence from X-ray Fiber Diffraction and Scanning Transmission Electron Microscopy, **228**, 735–742.

peroxidase
Crystallization and Preliminary X-ray Diffraction Studies of a Peroxidase from Barley Grain, **228**, 690–692.

lid
Specificity of Origin Recognition by Replication Initiator Protein in Plasmids of the pT181 Family is Determined by a Six Amino Acid Residue Element, **223**, 145–158.
Genetic and Functional Analysis of the Basic Replicon of pPS10, a Plasmid Specific for *Pseudomonas* Isolated from *Pseudomonas syringae patovar savastanoi*, **223**, 415–426.
The *mcm2* Mutation of Yeast Affects Replication, Rather than Segregation or Amplification of the Two Micron Plasmid, **224**, 545–558.
Site-specific Recombinase, R, Encoded by Yeast Plasmid pSR1, **225**, 25–37.
Characterization of the F Plasmid Mating Aggregation Gene *traN* and of a New F Transfer Region Locus *trbE*, **225**, 299–311.
kfrA Gene of Broad Host Range Plasmid RK2 Encodes a Novel DNA-binding Protein, **225**, 651–660.
Cre-*lox* Recombination in *Escherichia coli* Cells. Mechanistic Differences from the *in Vitro* Reaction, **226**, 661–673.
Stability of Coliphage λ DNA Replication Initiator, the λO Protein, **226**, 675–680.
Inheritance of the Replication Complex by One of Two Daughter Copies During λ Plasmid Replication in *Escherichia coli*, **226**, 681–688.
Cell Killing by the F Plasmid CcdB Protein Involves Poisoning of DNA–Topoisomerase II Complexes, **226**, 735–745.
Killing by the F Plasmid CcdB Protein Involves Poisoning of DNA–Topoisomerase II Complexes, **226**, 735–745.
Novel *Escherichia coli* Mutant, *dnaR*, Thermosensitive in Initiation of Chromosome Replication, **226**, 979–987.
Mutations Affecting RNA–DNA Hybrid Formation of the ColE1 Replication Primer RNA. Restoration of RNA I Sensitivity to a Copy-number Mutant by Second-site Mutations, **226**, 997–1008.
Effect of Terminal Non-homology on Intramolecular Recombination of Linear Plasmid Substrates in *Escherichia coli*, **227**, 72–80.
Rolling-circle Replication of a High-copy BPV-1 Plasmid, **228**, 1–6.
Differential Binding of Wild-type and a Mutant RepA Protein to *oriR* Sequence Suggests a Model for the Initiation of Plasmid R1 Replication, **228**, 787–802.

d F
Control of Segregation of Chromosomal DNA by Sex Factor F in *Escherichia coli*. Mutants of DNA Gyrase Subunit A Suppress *letD* (*ccdB*) Product Growth Inhibition, **225**, 39–52.
Characterization of the F Plasmid Mating Aggregation Gene *traN* and of a New F Transfer Region Locus *trbE*, **225**, 299–311.

d incompatibility group P
Inhibition of Bacteriophage λ Development by the *klaA* Gene of Broad-Host-Range Plasmid RK2, **227**, 1054–1067.

d maintenance
The *mcm2* Mutation of Yeast Affects Replication, Rather than Segregation or Amplification of the Two Micron Plasmid, **224**, 545–558.

Small Single-copy Region of Plastid DNA in the Non-photosynthetic Angiosperm *Epifagus virginiana* Contains Only Two Genes. Differences Among Dicots, Monocots and Bryophytes in Gene Organization at a Non-bioenergetic Locus, **223**, 95–104.
Large ATP Synthase Operon of the Red Alga *Antithamnion* sp. Resembles the Corresponding Operon in Cyanobacteria, **227**, 961–970.

Plastocyanin
Folding of Peptide Fragments Comprising the Complete Sequence of Proteins. Models for Initiation of Protein Folding II. Plastocyanin, **226**, 819–835.
Topology Fingerprint Approach to the Inverse Protein Folding Problem, **227**, 227–238.

Polarizing microscopy
Liquid Crystallinity in Condensed Type I Collagen Solutions. A Clue to the Packing of Collagen in Extracellular Matrices, **224**, 861–873.

Polyelectrolyte effect
Thermodynamic Stoichiometries of Participation of Water, Cations and Anions in Specific and Non-specific Binding of *lac* Repressor to DNA. Possible Thermodynamic Origins of the "Glutamate Effect" on Protein–DNA Interactions, **228**, 252–264.

Polyglutamates
Purification and Crystallization of *Lactobacillus casei* Folylpolyglutamate Synthetase Expressed in *Escherichia coli*, **224**, 1179–1180.

Polymerase chain reaction
Sequences of 20 Subunits of NADH:Ubiquinone Oxidoreductase from Bovine Heart Mitochondria. Application of a Novel Strategy for Sequencing Proteins Using the Polymerase Chain Reaction, **226**, 1051–1072.
Molecular Cloning and Analysis of the Gene Encoding the NADH Oxidase from *Streptococcus faecalis* 10C1. Comparison with NADH Peroxidase and the Flavoprotein Disulfide Reductases, **227**, 658–671.
The Repertoire of Human Germline V_H Sequences Reveals about Fifty Groups of V_H Segments with Different Hypervariable Loops, **227**, 776–798.
Mutational Spectra in Human B-cells. Spontaneous, Oxygen and Hydrogen Peroxide-induced Mutations at the *hprt* Gene, **228**, 813–826.

Polypeptide solvated
Taming Cut-off Induced Arifacts in Molecular Dynamics Studies of Solvated Polypeptides. The Reaction Field Method, **228**, 909–923.

Porin
Structure of Porin Refined at 1·8 Å Resolution, **227**, 493–509.

Porphobilinogen deaminase
Crystallization and Preliminary X-ray Investigation of *Escherichia coli* Porphobilinogen Deaminase, **224**, 269–271.

Potassium channel
Crystal Structure of α-Dendrotoxin from the Green Mamba Venom and its Comparison with the Structure of Bovine Pancreatic Trypsin Inhibitor, **224**, 671–683.

Pribnow box
Solution Structure of a DNA Octamer Containing the Pribnow Box *via* Restrained Molecular Dynamics Simulation with Distance and Torsion Angle Constraints Derived from Two-dimensional Nuclear Magnetic Resonance Spectral Fitting, **227**, 510–531.

Primary hyperoxaluria type 2
Crystallization and Preliminary Diffraction Studies of Hydroxypyruvate Reductase (D-Glycerate Dehydrogenase) from *Hyphomicrobium methylovorum*, **225**, 909–911.

Procarboxypeptidase A
Three-dimensional Structure of Porcine Pancreatic Procarboxypeptidase A. A Comparison of the A and B Zymogens and their Determinants for Inhibition and Activation, **224**, 141–157.

Progesterone
Refined *Structure* of Rat Clara Cell 17 kDa Protein at 3·0 Å Resolution, **224**, 441–448.

Proline
A Peptide Model for Proline Isomerism in the Unfolded State of Staphylococcal Nuclease, **228**, 343–346.

Pyrrolidine Ring Puckering in *cis* and *trans*-proline Residues in Proteins and Polypeptides. Different Puckers are Favoured in Certain Situations, **228**, 725–734.

Proline *cis–trans* isomerism

Proline *Cis–Trans* Isomers in Calbindin D_{9k} Observed by X-ray Crystallography, **223**, 601–606.

Promoter

Expectation Maximization Algorithm for Identifying Protein-binding Sites with Variable Lengths from Unaligned DNA Fragments, **223**, 159–170.

Proximal Sequence Element Factor Binding and Species Specificity in Vertebrate U6 snRNA Promoters, **223**, 873–884.

Transcription Factor eUSF is an Essential Component of Isolated Transcription Complexes on the Duck Histone H5 Gene and it Mediates the Interaction of TFIID with a TATA-Deficient Promoter, **223**, 885–898.

Supercoiling, Integration Host Factor, and a Dual Promoter System, Participate in the Control of the Bacteriophage α pL Promoter, **224**, 937–948.

Central Domain of the Positive Control Protein NifA and Its Role in Transcriptional Activation, **225**, 271–286.

Control of Adenovirus Major Late Gene Expression at Multiple Levels, **225**, 287–298.

DNA Supercoiling Response of the σ^{54}-dependent *Klebsiella pneumoniae nifL* Promoter *in vitro*, **225**, 591–607.

Promoter Sequence Containing $(CT)_n \cdot (GA)_n$ Repeats is Critical for the Formation of the DNase I Hypersensitive Sites in the *Drosophila hsp26* Gene, **225**, 985–998.

Mutagenesis of the *Bacillus subtilis* "−12, −24" Promoter of the Levanase Operon and Evidence for the Existence of an Upstream Activating Sequence, **226**, 85–99.

Substitution of a Single Bacteriophage T3 Residue in Bacteriophage T7 RNA Polymerase at Position 748 Results in a Switch in Promoter Specificity, **228**, 506–515.

Promoter B block element

Adenovirus VARNA1 Gene B Block Promoter Element Sequences Required for Transcription and for Interaction with Transcription Factors, **227**, 1068–1085.

Promoter bacteriophage P1

Mutational Analysis of the Bacteriophage P1 Late Promoter Sequence P_s, **228**, 101–107.

Pro-peptide

Functional Analysis of the Intramolecular Chaperone. Mutational Hot Spots in the Subtilisin Pro-peptide and a Second-site Suppressor Mutation within the Subtilisin Molecule, **226**, 931–933.

Protease

Crystallization and Preliminary X-ray Investigation of Proteinase A, a Non-pepsin-type Acid Proteinase from *Aspergillus niger* var. *macrosporus*, **223**, 373–375.

Correlation of Co-ordinated Amino Acid Changes at the Two-domain Interface of Cysteine Proteases with Protein Stability, **224**, 501–509.

Three-dimensional Structure of a Recombinant Variant of Human Pancreatic Secretory Trypsin Inhibitor (Kazal Type), **225**, 1095–1103.

Crystallization, Activity Assay and Preliminary X-ray Diffraction Analysis of the Uncleaved Form of the Serpin Antichymotrypsin, **226**, +273–276.

The Crystal Structure of the *Bacillus lentus* Alkaline Protease, Subtilisin BL, at 1·4 Å Resolution, **228**, 580–595.

Proteasome

DNA Sequence Analysis of 66 kb of the Human MHC Class II Region Encoding a Cluster of Genes for Antigen Processing, **228**, 433–441.

Protein

Pyrrolidine Ring Puckering in *cis* and *trans*-proline Residues in Proteins and Polypeptides. Different Puckers are Favoured in Certain Situations, **228**, 725–734.

Protein α-helix

Energetic Contribution of Solvent-exposed Ion Pairs to Alpha-helix *Structure*, **223**, 343–350.

α-Helix Stability in Proteins. II. Factors that Influence Stability at an Internal Position, **227**, 560–568.

Pyrrolidine Ring Puckering in *cis* and *trans*-proline Residues in Proteins and Polypeptides. Different Puckers are Favoured in Certain Situations, **228**, 725–734.

Protein amino acid frequencies

Amino Acid Preferences of Small Proteins. Implications for Protein Stability and Evolution, **227**, 991–995.

Protein amino acid preference

Amino Acid Preferences of Small Proteins. Implications for Protein Stability and Evolution, **227**, 991–995.

Protein amino acid residue contacts

Contact Potential that Recognizes the Correct Folding of Globular Proteins, **227**, 876–888.

Protein association

Crystal Packing in Six Crystal Forms of Pancreatic Ribonuclease, **228**, 243–251.

Protein β-barrel

Anatomy and Evolution of Proteins Displaying the Viral Capsid Jellyroll Topology, **228**, 220–242.

Similarities and Differences between Human Cyclophilin A and Other β-Barrel Structures. Structural Refinement at 1·63 Å Resolution, **228**, 539–550.

Protein β-sheet

β-Trefoil Fold. Patterns of *Structure* and *Sequence* in Kunitz Inhibitors Interleukins-1β and 1α and Fibroblast Growth Factors, **223**, 531–543.

Metal Ion-induced Conformational Changes of Phosphorylated Fragments of Human Neurofilament (NF) Protein, **223**, 673–682.

Orthogonal ββ Motifs in Proteins, **223**, 845–851.

Crystallization, Activity Assay and Preliminary X-ray fraction Analysis of the Uncleaved Form of the Serpin Antichymotrypsin, **226**, +273–276.

Protein β-turn

Pyrrolidine Ring Puckering in *cis* and *trans*-proline Residues in Proteins and Polypeptides. Different Puckers are Favoured in Certain Situations, **228**, 725–734.

Protein binding surface

Identification of a Protein-binding Surface by Differential Amide Hydrogen-exchange Measurements. Application to bowman-Birk serine-protease Inhibitor, **223**, 873–889.

Protein bound water

Localization of Bound Water in the Solution Structure of the Immunoglobulin Binding Domain of Streptococcal Protein G. Evidence for Solvent-induced Helical Distortion in Solution, **223**, 853–856.

Nuclear Magnetic Resonance Detection of Bound Water Molecules in the Active Site of *Lactobacillus casei* Dihydrofolate Reductase in Aqueous Solution, **223**, 549–554.

Structure of a Hinge-bending T4 Lysozyme Mutant, Ile 3→Pro, **227**, 917–933.

Protein calorimetry

Protein Interactions with Urea and Guanidinium Chloride. A Calorimetric Study, **226**, 491–505.

Protein carbonate interactions

Protein–Ligand Energetics Assessed Using Deoxy and Fluorodeoxy Sugars in Equilibrium Binding and High Resolution *Crystallographic Studies*, **226**, 923–929.

Protein cavities

Structure of a Hinge-bending T4 Lysozyme Mutant, Ile 3→Pro, **227**, 917–933.

Protein chemistry

Dissection of an Enzyme by Protein Engineering. The N- and C-Terminal Fragments of Barnase Form a Native-like Complex with Restored Enzymic Activity, **227**, 741–747.

n codon bias
Protein Folding within the Cell Is Influenced by Controlled Rates of Polypeptide Elongation, **228**, 7–12.

n coiled coils
Three-dimensional Structure of a Cloning Vector. X-ray Diffraction Studies of Filamentous Bacteriophage M13 at 7 Å Resolution, **226**, 455–470.
Structure of Tropomyosin at 9 Ångstroms Resolution, **227**, 441–452.

n cold denaturation
Thermodynamic Characterization of Cytochrome *c* at Low pH. Observation of the Molten Globule State and of the Cold Denaturation Process, **223**, 1139–1153.

n complementation
Interchangeability of Related Proteins and Autonomy of Function. The Morphogenetic Proteins of Filamentous Phage f1 and IKe Cannot Replace One Another, **227**, 453–462.

n conformation
Sequence Alignment Approach to Pick Up Conformationally Similar Protein Fragments, **223**, 1053–1061.
Effect of Additives on the Crystallization of Glutamate Dehydrogenase from *Clostridium symbiosum*. Evidence for a Ligand-induced Conformational Change, **224**, 1181–1184.
Domain Closure in Mitochondrial Aspartate Aminotransferase, **227**, 197–213.
Stability of a Model β-Sheet in Water, **227**, 1244–1252.
Folding on the Ribosome of *Escherichia coli* Tryptophan Synthase β Subunit Nascent Chains Probed with a Conformation-dependent Monoclonal Antibody, **228**, 359–365.
In Vitro Analysis of Mutant LexA Proteins with an Increased Rate of Specific Cleavage, **228**, 395–408.
Conformational Changes of a Viral Capsid Protein. Thermodynamic Rationale for Proteolytic Regulation of Bacteriophage T4 Capsid Expansion, Co-operativity, and Super-stabilization by Soc Binding, **228**, 870–884.

n conformational change
Conformational Interconversion in Protein Crystals, **224**, 207–215.
Taxonomy and Conformational Analysis of Loops in Proteins, **224**, 685–699.
Comparison of the Refined *Crystal Structures* of Liganded and Unliganded Chicken, Yeast and Trypanosomal Triosephosphate Isomerase, **224**, 1115–1126.
X-ray Structure Refinement and Comparison of Three Forms of Mitochondrial Aspartate Aminotransferase, **225**, 495–517.
X-ray Solution Scattering Reveals Conformational Changes upon Iron Uptake in Lactoferrin, Serum and Ovo-transferrins, **225**, 811–819.
Energetics of the Strand Separation Transition in Superhelical DNA, **225**, 835–847.
Refined 2·5 Å Structure of Murine Adenosine Deaminase at pH 6·0, **226**, 917–921.

n conformational search
Sequence Alignment Approach to Pick Up Conformationally Similar Protein Fragments, **223**, 1053–1061.
Optimal Protocol and Trajectory Visualization for Conformational Searches of Peptides and Proteins, **225**, 519–532.

n consensus sequences
Expectation Maximization Algorithm for Identifying Protein-binding Sites with Variable Lengths from Unaligned DNA Fragments, **223**, 159–170.

n construction of chimeric genes
Functional Structures of the RecA Protein Found by Chimera Analysis, **226**, 651–660.

n Data base
Accurate Modeling of Protein Conformation by Automatic Segment Matching, **226**, 507–533.

Protein Debye–Waller factor
Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. I. Theory and Test by Simulated Diffraction Data, **225**, 457–475.
Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. II. Application to Human Lysozyme, **225**, 477–486.

Protein degradation
Stability of Coliphage λ DNA Replication Initiator, the λO Protein, **226**, 675–680.

Protein denaturation
Protein Interactions with Urea and Guanidinium Chloride. A Calorimetric Study, **226**, 491–505.
Domain Structure and Domain–Domain Interactions in the Carboxy-terminal Heparin Binding Region of Fibronectin, **227**, 1182–1191.
Absence of the Thermal Transition in Apo-α-Lactalbumin in the Molten Globule State. A Study by Differential Scanning Microcalorimetry, **228**, 347–350.

Protein design
Design and Structural Analysis of Alternative Hydrophobic Core Packing Arrangements in Bacteriophage T4 Lysozyme, **224**, 1143–1159.
De novo Design, Synthesis and Study of Albebetin, a Polypeptide with a Predetermined Three-dimensional Structure. Probing the Structure at the Nanogram Level, **225**, 927–931.
Three-dimensional Structure of a Recombinant Variant of Human Pancreatic Secretory Trypsin Inhibitor (Kazal Type), **225**, 1095–1103.

Protein determinants
Binding of the Yeast $tRNA^{Met}$ Anticodon by the Cognate Methionyl-tRNA Synthetase Involves at Least Two Independent Peptide Regions, **225**, 897–907.

Protein dimer
Comparison of the Refined *Crystal Structures* of Liganded and Unliganded Chicken, Yeast and Trypanosomal Triosephosphate Isomerase, **224**, 1115–1126.
Three-dimensional Solution Structure of an Insulin Dimer. A Study of the B9(Asp) Mutant of Human Insulin Using Nuclear Magnetic Resonance, Distance Geometry and Restrained Molecular Dynamics, **227**, 1146–1163.

Protein distributed Multipole Analysis
Towards an Understanding of the Arginine–Aspartate Interaction, **226**, 251–262.

Protein disulphide bond
Kinetic Roles and Conformational Properties of the Non-native Two-disulphide Intermediates in the Refolding of Bovine Pancreatic Trypsin Inhibitor, **224**, 905–911.
Crystallographic Data for the 9000 Dalton Wheat Non-specific Phospholipid Transfer Protein, **226**, 563–564.
Thermal Motions of Surface α-Helices in the D-Galactose Chemosensory Receptor. Detection by Disulfide Trapping, **226**, 1219–1235.

Protein disulphide bonds
Thermodynamic Consequences of the Removal of a Disulphide Bridge from Hen Lysozyme, **225**, 939–943.

Protein docking
Docking by Least-squares Fitting of Molecular Surface Patterns, **225**, 849–858.

Protein domain
Nucleosome Core Binding Region of Chromosomal Protein HMG-17 Acts as an Independent Functional Domain, **228**, 442–449.
Biochemical Characterization of the Major Structural Domain, **228**, 652–661.

Protein domain motion
Structure of a Hinge-bending T4 Lysozyme Mutant, Ile-3→Pro, **227**, 917–933.

Protein domains
Adjacent Zinc-finger Motifs in Multiple Zinc-finger Peptides from SWI5 Form Structurally Independent, Flexibly Linked Domains, **228**, 619–636.

Protein dynamics
Three-dimensional *Solution Structure* of Apo-neocarzinostatin, **225**, 125–135.
Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. I. Theory and Test by Simulated Diffraction Data, **225**, 457–475.
Normal Mode Refinement: Crystallographic Refinement of Protein Dynamic Structure. II. Application to Human Lysozyme, **225**, 477–486.
Structure of a Hinge-bending T4 Lysozyme Mutant, Ile-3→Pro, **227**, 917–933.

Protein engineering
Correlation of Co-ordinated Amino Acid Changes at the Two-domain Interface of Cysteine Proteases with Protein Stability, **224**, 501–509.
His92Ala Mutation in Ribonuclease T_1 Induces Segmental Flexibility. *An X-ray Study*, **224**, 701–713.
Co-operative Interactions during Protein Folding, **224**, 733–740.
Histidine–Aromatic Interactions in Barnase. Elevation of Histidine pK_a and Contribution to Protein Stability, **224**, 759–770.
The Folding of an Enzyme. I. Theory of Protein Engineering Analysis of Stability and Pathway of Protein Folding, **224**, 771–782.
Improving the Antigen Affinity of an Antibody Fv-fragment by Protein Design, **224**, 913–918.
Mutation of Asparagine 111 of Rubisco from *Rhodospirillum rubrum* Alters the Carboxylase/Oxygenase Specificity, **225**, 891–896.
Protein–Ligand Energetics Assessed Using Deoxy and Fluorodeoxy Sugars in Equilibrium Binding and High Resolution *Crystallographic Studies*, **226**, 923–929.
Structure of DNA–RecA Complexes Studied by Residue Differential Linear Dichroism and Fluorescence Spectroscopy for a Genetically Engineered RecA Protein, **226**, 1193–1205.
Thermal Motions of Surface α-Helices in the D-Galactose Chemosensory Receptor. Detection by Disulfide Trapping, **226**, 1219–1235.

Protein evolution
The Folding of an Enzyme. VI. The Folding Pathway of Barnase: Comparison with Theoretical Models, **224**, 847–859.
Amino Acid Preferences of Small Proteins. Implications for Protein Stability and Evolution, **227**, 991–995.

Protein excluded volume approximation
Evaluation of Protein Models by Atomic Solvation Preference, **225**, 93–105.

Protein expectation maximum
Expectation Maximization Algorithm for Identifying Protein-binding Sites with Variable Lengths from Unaligned DNA Fragments, **223**, 159–170.

Protein expression
Sequence-specific DNA Binding by a Two Zinc-finger Peptide from the *Drosophila melanogaster* Tramtrack Protein, **226**, 349–366.

Protein filaments
Substitutions of Hydrophobic Amino Acids Reduce the Amyloidogenicity of Alzheimer's Disease βA4 Peptides, **228**, 460–473.

Protein FMN interactions
Crystal Structure of Oxidized Flavodoxin from a Red Alga *Chondrus crispus* Refined at 1·8 Å Resolution. Description of the Flavin Mononucleotide Binding Site, **225**, 775–789.

Protein folding
Energetic Contribution of Solvent-exposed Ion Pairs to Alpha-helix *Structure*, **223**, 343–350.
Thermodynamics of Unfolding of the α-Amylase Inhibitor Tendamistat. Correlations Between Accessible Surface Area and Heat Capacity, **223**, 769–779.
Orthogonal ββ Motifs in Proteins, **223**, 845–851.
Molecular Dynamics Simulations of Helix Denaturat
223, 1121–1138.
Kinetic Coupling between Protein Folding and Pr
Isomerization. I. Theoretical Models, **224**, 217–22
Kinetic Coupling between Protein Folding and Pr
Isomerization. II. Folding of Ribonuclease A a
Ribonuclease T_1, **224**, 231–240.
Effects of Glycosylation on the Folding and Stabilit
Human, Recombinant and Cleaved α_1-Antitryp
224, 241–252.
Contribution of Hydration and Non-covalent Interact
to the Heat Capacity Effect on Protein Unfolding,
715–723.
Structure-derived Hydrophobic Potential. Hydroph
Potential Derived from X-ray Structures of Glob
Proteins is able to Identify Native Folds, 22
725–732.
Co-operative Interactions during Protein Folding,
733–740.
Dissection of an Enzyme by Protein Engineering. Th
and C-Terminal Fragments of Barnase Form a Nat
like Complex with Restored Enzymic Activity,
741–747.
An N-terminal Fragment of Barnase has Residual He
Structure Similar to that in a Refolding Intermedi
224, 749–758.
Histidine–Aromatic Interactions in Barnase. Elevatio
Histidine pK_a and Contribution to Protein Stabi
224, 759–770.
The Folding of an Enzyme. I. Theory of Protein Engi
ing Analysis of Stability and Pathway of Protein F
ing, **224**, 771–782.
The Folding of an Enzyme. II. *Substructure* of Bar
and the Contribution of Different Interactions to
tein Stability, **224**, 783–804.
The Folding of an Enzyme. III. *Structure* of the Trans
State for Unfolding of Barnase Analysed by a Pro
Engineering Procedure, **224**, 805–818.
The Folding of an Enzyme. IV. Structure of an I
mediate in the Refolding of Barnase Analysed
Protein Engineering Procedure, **224**, 819–835.
The Folding of an Enzyme. V. H/^{2}H Exchange–*Nu*
Magnetic Resonance Studies on the Folding Pathw
Barnase: Complementarity to and Agreement w
Protein Engineering Studies, **224**, 837–845.

Barnase: Comparison with Theoretical Models,
847–859.
Kinetic Roles and Conformational Properties of the
native Two-disulphide Intermediates in the Refol
of Bovine Pancreatic Trypsin Inhibitor, **224**, 905–
1·7 Å X-ray Structure of the Periplasmic Ribose Rece
from *Escherichia coli*, **225**, 155–175.
Effect of Active Site Residues in Barnase on Activity
Stability, **225**, 585–589.
Predicting Protein Secondary Structure Content. A
dem Neural Network Approach, **225**, 713–727.
Thermodynamic Consequences of the Removal of a D
phide Bridge from Hen Lysozyme, **225**, 939–943.
Aromatic–Aromatic Interactions in the Zinc Finger M
Analysis of the Two-dimensional *Nuclear Mag*
Resonance Structure of a Mutant Domain, 2
1035–1047.
Contribution of the Hydrophobic Effect to Globular
tein Stability, **226**, 29–35.
Folding of Peptide Fragments Comprising the Com
Sequence of Proteins. Models for Initiation of Pr
Folding I. Myohemerythrin, **226**, 795–817.
Folding of Peptide Fragments Comprising the Com
Sequence of Proteins. Models for Initiation of Pr
Folding II. Plastocyanin, **226**, 819–835.
Functional Analysis of the Intramolecular Chaper
Mutational Hot Spots in the Subtilisin Pro-pep
and a Second-site Suppressor Mutation within the
tilisin Molecule, **226**, 931–933.
Hydrogen Bonding in Globular Proteins, **226**, 1143–1

Molecular Basis of Co-operativity in Protein Folding. III. Structural Identification of Cooperative Folding Units and Folding Intermediates, **227**, 293–306.
Characterization of "Native" Apomyoglobin by Molecular Dynamics Simulation, **227**, 375–380.
Loop Mutations Can Cause a Substantial Conformational Change in the Carboxy Terminus of the Ferritin Protein, **227**, 532–543.
α-Helix Stability in Proteins. I. Empirical Correlations Concerning Substitution of Side-chains at the N and C-caps and the Replacement of Alanine by Glycine or Serine at Solvent-exposed Surfaces, **227**, 544–559.
α-Helix Stability in Proteins. II. Factors that Influence Stability at an Internal Position, **227**, 560–568.
Contact Potential that Recognizes the Correct Folding of Globular Proteins, **227**, 876–888.
Analysis of the Heat Capacity Dependence of Protein Folding, **227**, 889–900.
Prediction of Protein Folding Pathways, **227**, 901–916.
Protein Folding within the Cell Is Influenced by Controlled Rates of Polypeptide Elongation, **228**, 7–12.
Discrimination of the $(\beta/\alpha)_8$-Barrel Fold, **228**, 170–187.
Anatomy and Evolution of Proteins Displaying the Viral Capsid Jellyroll Topology, **228**, 220–242.
A Peptide Model for Proline Isomerism in the Unfolded State of Staphylococcal Nuclease, **228**, 343–346.
Absence of the Thermal Transition in Apo-α-Lactalbumin in the Molten Globule State. A Study by Differential Scanning Microcalorimetry, **228**, 347–350.
Folding on the Ribosome of *Escherichia coli* Tryptophan Synthase β Subunit Nascent Chains Probed with a Conformation-dependent Monoclonal Antibody, **228**, 359–365.

n four-helix bundle

Human Interleukin 4. The Solution *Structure* of a Four-helix Bundle Protein, **224**, 899–904.
Three-dimensional Structure of Recombinant Human Granulocyte-macrophage colony-stimulating Factor, **224**, 1075–1085.

n fragments

Dissection of an Enzyme by Protein Engineering. The N and C-Terminal Fragments of Barnase Form a Native-like Complex with Restored Enzymic Activity, **224**, 741–747.

n functional domain

Inhibitory Effects of N-and C-terminal Truncated *Escherichia coli recA* Gene Products on Functions of the Wild-type *recA* Gene, **223**, 105–114.
C-terminal Truncated *Escherichia coli* RecA Protein RecA5327 Has Enhanced Binding Affinities to Single- and Double-stranded DNAs, **223**, 115–129.

n fusion

Loop Mutations Can Cause a Substantial Conformational Change in the Carboxy Terminus of the Ferritin Protein, **227**, 532–543.

n G

Crystallization and Preliminary X-ray Analysis of the Complex between a Mouse Fab Fragment and a Single IgG-Binding Domain from Streptococcal Protein G, **227**, 1253–1254.
Determination of the Solution Structures of Domains II and III of Protein G from *Streptococcus* by ^{1}H Nuclear Magnetic Resonance, **228**, 1219–1234.

n GDP binding

Refined Structure of Elongation Factor EF-Tu from *Escherichia coli*, **223**, 721–742.

n globular

Contact Potential that Recognizes the Correct Folding of Globular Proteins, **227**, 876–888.

n groove identification

The Interdependence of Protein Surface Topography and Bound Water Molecules Revealed by Surface Accessibility and Fractal Density Measures, **228**, 13–22.

n helical

Activation of RecA Protein. The Open Helix Model for LexA Cleavage, **226**, 707–719.
Helical Structure of P Pili from *Escherichia coli*. Evidence from X-ray Fiber Diffraction and Scanning Transmission Electron Microscopy, **228**, 735–742.
Terminating a Macromolecular Helix. Structural Model for the Minor Proteins of Bacteriophage M13, **228**, 885–892.

Protein helix

Energetic Contribution of Solvent-exposed Ion Pairs to Alpha-helix *Structure*, **223**, 343–350.
Molecular Dynamics Simulations of Helix Denaturation, **223**, 1121–1138.
Histidine–Aromatic Interactions in Barnase. Elevation of Histidine pK_a and Contribution to Protein Stability, **224**, 759–770.
Folding of Peptide Fragments Comprising the Complete Sequence of Proteins. Models for Initiation of Protein Folding I. Myohemerythrin, **226**, 795–817.
Modeling of the Structure of Bacteriorhodopsin. A Molecular Dynamics Study, **226**, 837–850.
Hydrogen Bonding in Globular Proteins, **226**, 1143–1159.
Refined 1·8 Å Crystal Structure of the λ Repressor–Operator Complex, **227**, 177–196.

Protein helix stability

Nuclear Magnetic Resonance Studies of the Internal Dynamics in Apo, $(Cd^{2+})_1$ and $(Ca^{2+})_2$ Calbindin D_{9k}. The Rates of Amide Proton Exchange with Solvent, **227**, 1100–1117.

Protein helix-turn-helix motif

Crystallization and Preliminary X-ray Studies on the Co-repressor Binding Domain of the *Escherichia coli* Purine Repressor, **225**, 1131–1133.
Contacts between Tet Repressor and *tet* Operator Revealed by New Recognition Specificities of Single Amino Acid Replacement Mutants, **226**, 1257–1270.

Protein hexamer

Crystallization and Preliminary Crystallographic Studies of Glucosamine-6-phosphate Deaminase from *Escherichia coli* K12, **226**, 1283–1286.

Protein homology

Structure of Tobraviral Particles: A Model Suggested from Sequence Conservation in Tobraviral and Tobamoviral Coat Proteins, **227**, 1–8.
Interchangeability of Related Proteins and Autonomy of Function. The Morphogenetic Proteins of Filamentous Phage f1 and IKe Cannot Replace One Another, **227**, 453–462.
Is the Bacteriophage Lambda Lysozyme an Evolutionary Link or a Hybrid between the C and V-type Lysozymes? Homology Analysis and Detection of the Catalytic Amino Acid Residues, **228**, 529–538.

Protein hydration

Comparison of *X-ray Structures* of the Nucleosome Core Particle in Two Different Hydration States, **224**, 253–264.
Contribution of Hydration and Non-covalent Interactions to the Heat Capacity Effect on Protein Unfolding, **224**, 715–723.

Protein hydrogen bond

Energy-optimized *Structure* of Antifreeze Protein and Its Binding Mechanism, **223**, 509–517.
The Folding of an Enzyme. II. *Substructure* of Barnase and the Contribution of Different Interactions to Protein Stability, **224**, 783–804.
Solution ^{1}H *Nuclear Magnetic Resonance* Determination of Hydrogen Bonding of the E10 (66) Arg Side-chain to the Bound Ligand in *Aplysia* Cyano-met Myoglobin, **224**, 891–897.
Protein–Ligand Energetics Assessed Using Deoxy and Fluorodeoxy Sugars in Equilibrium Binding and High Resolution *Crystallographic Studies*, **226**, 923–929.
Hydrogen Bonding in Globular Proteins, **226**, 1143–1159.
Analysis of the Heat Capacity Dependence of Protein Folding, **227**, 889–900.
Stability of a Model β-Sheet in Water, **227**, 1244–1252.
Substitution of a Single Bacteriophage T3 Residue in Bacteriophage T7 RNA Polymerase at Position 748

Results in a Switch in Promoter Specificity, **228**, 506–515.
Structural Consequences of Sequence Patterns in the Fingerprint Region of the Nucleotide Binding Fold. Implications for Nucleotide Specificity, **228**, 662–671.

Protein hydrogen exchange
Identification of a Protein-binding Surface by Differential Amide Hydrogen-exchange Measurements. Application to bowman-Birk serine-protease Inhibitor, **225**, 873–889.

Protein hydrophilicity
α-Helix Stability in Proteins. I. Empirical Correlations Concerning Substitution of Side-chains at the N and C-caps and the Replacement of Alanine by Glycine or Serine at Solvent-exposed Surfaces, **227**, 544–559.
The Interdependence of Protein Surface Topography and Bound Water Molecules Revealed by Surface Accessibility and Fractal Density Measures, **228**, 13–22.

Protein hydrophobic structures
Analysis of Non-polar Regions in Proteins, **224**, 629–638.
Structure-derived Hydrophobic Potential. Hydrophobic Potential Derived from X-ray Structures of Globular Proteins is able to Identify Native Folds, **224**, 725–732.
The Folding of an Enzyme. II. *Substructure* of Barnase and the Contribution of Different Interactions to Protein Stability, **224**, 783–804.
The Folding of an Enzyme. III. *Structure* of the Transition State for Unfolding of Barnase Analysed by a Protein Engineering Procedure, **224**, 805–818.
The Folding of an Enzyme. V. H/^{2}H Exchange–*Nuclear Magnetic Resonance* Studies on the Folding Pathway of Barnase: Complementarity to and Agreement with Protein Engineering Studies, **224**, 837–845.
Design and Structural Analysis of Alternative Hydrophobic Core Packing Arrangements in Bacteriophage T4 Lysozyme, **224**, 1143–1159.
Evaluation of Protein Models by Atomic Solvation Preference, **225**, 93–105.
Temperature Dependence of the Kinetics of the Urea-induced Dissociation of Human Plasma α_2-Macroglobulin into Half-molecules. A Minimum Rate at 15°C Indicates Hydrophobic Interaction between the Subunits, **225**, 551–556.
Contribution of the Hydrophobic Effect to Globular Protein Stability, **226**, 29–35.
Modeling of the Structure of Bacteriorhodopsin. A Molecular Dynamics Study, **226**, 837–850.

Protein *in vitro* biosynthesis
De novo Design, Synthesis and Study of Albebetin, a Polypeptide with a Predetermined Three-dimensional Structure. Probing the Structure at the Nanogram Level, **225**, 927–931.

Protein induced fit
Crystal Structures of two Mutant Neuraminidase–Antibody Complexes with Amino Acid Substitutions in the Interface, **227**, 149–159.
Refined Structure of the Complex between Guanylate Kinase and its Substrate GMP at 2·0 Å Resolution, **224**, 1127–1141.

Protein inhibitory binding
Crystal Structure of the Complex between Carboxypeptidase A and the Biproduct Analog Inhibitor L-Benzylsuccinate at 2·0 Å Resolution, **223**, 573–578.
Three-dimensional Structure of Porcine Pancreatic Procarboxypeptidase A. A Comparison of the A and B Zymogens and their Determinants for Inhibition and Activation, **224**, 141–157.
Crystal Structures of Phosphate, Iodide and Iodate-inhibited Phospholipase C from *Bacillus cereus* and Structural Investigations of the Binding of Reaction Products and a Substrate Analogue, **225**, 543–549.
Refined 2·3 Å X-ray Crystal Structure of Bovine Thrombin Complexes Formed with the Benzamidine and Arginine-based Thrombin Inhibitors NAPAP, 4-TAPAP and MQPA. A Starting Point for Improv Antithrombotics, **226**, 1085–1099.

Protein interaction
Modulation of Thrombin–Hirudin Interaction by Spec Ion Effects, **226**, 263–269.

Protein interface
Crystal Structures of two Mutant Neuraminidase–A body Complexes with Amino Acid Substitutions in Interface, **227**, 149–159.

Protein interfaces
Domain Closure in Mitochondrial Aspartate Aminotra ferase, **227**, 197–213.

Protein kalman filtering
Computing the Geometry of a Molecule in Dihedral A Space Using n.m.r.-derived Constraints. A New A rithm Based on Optimal Filtering, **223**, 299–315.

Protein kinase
Autophosphorylating Protein Kinase Activity in Till like Arthropod Projectin, **224**, 287–292.

Protein ligand asymmetry
Use of Binding Site Neighbor-effect Parameters to Ev ate the Interactions between Adjacent Ligands o Linear Lattice. Effects on Ligand–Lattice Associat **223**, 1063–1087.

Protein ligand binding
1·7 Å X-ray Structure of the Periplasmic Ribose Recep from *Escherichia coli*, **225**, 155–175.

Protein loops
Taxonomy and Conformational Analysis of Loops in I teins, **224**, 685–699.
Loop Mutations Can Cause a Substantial Conformati Change in the Carboxy Terminus of the Ferritin I tein, **227**, 532–543.

Protein maximum entropy
Pre-nucleation *Crystallization* Studies on Aminoa tRNA Synthetases by Dynamic Light-scattering, 185–191.

Protein membrane interaction
A 9 Å Two-dimensional Projected *Structure* of Cho Toxin B-subunit–G_{M1} Complexes Determined by E tron *Crystallography*, **226**, 23–28.

Protein metal binding
Metal Ion-induced Conformational Changes of Phosph ylated Fragments of Human Neurofilament (NF Protein, **223**, 673–682.
Crystallization and Oligomeric Structure of Rat L Arginase, **224**, 1175–1177.
Comparison of the Solution Conformations of Hu [Zn_7]-metallothionein-2 and [Cd]-metallothionei using Nuclear Magnetic Resonance Spectroscopy, 433–443.

Protein modelling
Energetic Contribution of Solvent-exposed Ion Pair Alpha-helix *Structure*, **223**, 343–350.
Structure-derived Hydrophobic Potential. Hydroph Potential Derived from X-ray Structures of Glob Proteins is able to Identify Native Folds, 22 725–732.
Improving the Antigen Affinity of an Antibody Fv-f ment by Protein Design, **224**, 913–918.
Optimal Protocol and Trajectory Visualization for Con mational Searches of Peptides and Proteins, 22 519–532.
X-ray Solution Scattering Reveals Conformation Changes upon Iron Uptake in Lactoferrin, Serum Ovo-transferrins, **225**, 811–819.
Three-dimensional *Structure* for the β_2 Adrenergic Re tor Protein Based on Computer Modeling Studies, 2 859–871.
Towards an Understanding of the Arginine–Aspart Interaction, **226**, 251–262.
Accurate Modeling of Protein Conformation by Autom Segment Matching, **226**, 507–533.

n models
Evaluation of Protein Models by Atomic Solvation Preference, **225**, 93–105.

n molecular recognition
Three-dimensional *Structure* for the β_2 Adrenergic Receptor Protein Based on Computer Modeling Studies, **225**, 859–871.

n molecular replacement
Crystal Structure of the Unique Parvalbumin Component from Muscle of the Leopard Shark (*Triakis semifasciata*). The First X-ray Study of an α-Parvalbumin, **223**, 705–720.

n Molecular surface
Docking by Least-squares Fitting of Molecular Surface Patterns, **225**, 849–858.

n molten globule
Dissociation of a Native Dimer to a Molten Globule Monomer. Effects of Pressure and Dilution on the Association Equilibrium of Arc Repressor, **223**, 545–555.
Thermodynamic Characterization of Cytochrome *c* at Low pH. Observation of the Molten Globule State and of the Cold Denaturation Process, **223**, 1139–1153.
Molecular Basis of Co-operativity in Protein Folding. III. Structural Identification of Cooperative Folding Units and Folding Intermediates, **227**, 293–306.
Absence of the Thermal Transition in Apo-α-Lactalbumin in the Molten Globule State. A Study by Differential Scanning Microcalorimetry, **228**, 347–350.

n Monte Carlo optimization
Evaluation of Protein Models by Atomic Solvation Preference, **225**, 93–105.
Optimal Protocol and Trajectory Visualization for Conformational Searches of Peptides and Proteins, **225**, 519–532.

n mosaic
Refined Solution Structure and Ligand-binding Properties of PDC-109 Domain b. A Collagen-binding Type II Domain, **223**, 281–298.

n multiple alignment
Expectation Maximization Algorithm for Identifying Protein-binding Sites with Variable Lengths from Unaligned DNA Fragments, **223**, 159–170.

n Multiple isomorphous replacement
Structure Determination and Refinement of Bovine Lens Leucine Aminopeptidase and its Complex with Bestatin, **224**, 113–140.

n multi-state models
Kinetic Coupling between Protein Folding and Prolyl Isomerization. I. Theoretical Models, **224**, 217–229.

n multivariate statistical analysis
Two-dimensional *Crystals* of *Escherichia coli* Maltoporin and Their Interaction with the Maltose-binding Protein, **223**, 1155–1165.

n non-covalent bond
The Folding of an Enzyme. I. Theory of Protein Engineering Analysis of Stability and Pathway of Protein Folding, **224**, 771–782.

n non-specific binding
Three-dimensional *Structure* of a Mutant Ribonuclease T_1 (Y45W) Complexed with Non-cognizable Ribonucleotide, 2′AMP, and Its Comparison with a Specific Complex with 2′GMP, **223**, 1013–1028.

n nucleic acid interactions
Role of Residue Glu152 in the Discrimination between Transfer RNAs by Tyrosyl-tRNA Synthetase from *Bacillus stearothermophilus*, **223**, 801–810.
Use of Binding Site Neighbor-effect Parameters to Evaluate the Interactions between Adjacent Ligands on a Linear Lattice. Effects on Ligand–Lattice Association, **223**, 1063–1087.
Cryoelectron Microscopic Visualization of Functional Subassemblies of the Bacteriophage T4 DNA Replication Complex, **224**, 395–412.
Crystallization of Aspartyl-tRNA Synthetase-$tRNA^{Asp}$ Complex from *Escherichia coli* and First Crystallographic Results, **224**, 1171–1173.
Aromatic–Aromatic Interactions in the Zinc Finger Motif. Analysis of the Two-dimensional *Nuclear Magnetic Resonance* Structure of a Mutant Domain, **225**, 1035–1047.
The *X-ray Structure* of the DNase I-d $(GGTATACC)_2$ Complex at 2·3 Å Resolution, **226**, 1237–1256.
Contacts between Tet Repressor and *tet* Operator Revealed by New Recognition Specificities of Single Amino Acid Replacement Mutants, **226**, 1257–1270.
Refined 1·8 Å Crystal Structure of the λ Repressor–Operator Complex, **227**, 177–196.
Substitution of a Single Bacteriophage T3 Residue in Bacteriophage T7 RNA Polymerase at Position 748 Results in a Switch in Promoter Specificity, **228**, 506–515.

Protein nucleotide binding
McrBC: a Multisubunit GTP-dependent Restriction Endonuclease, **225**, 327–348.
Site-directed Mutagenesis of the GTP-binding Domain of β-Tubulin, **227**, 307–321.
Structural Consequences of Sequence Patterns in the Fingerprint Region of the Nucleotide Binding Fold. Implications for Nucleotide Specificity, **228**, 662–671.

Protein oligomerization
Ubiquitous Soluble Mg^{2+}–ATPase Complex. A *Structural* Study, **223**, 557–571.
Functional Structures of the RecA Protein Found by Chimera Analysis, **226**, 651–660.

Protein overexpression
Three-dimensional *Structure* of T3 Connector Purified from Overexpressing Bacteria, **224**, 103–112.
Purification and Crystallization of Glycogen Phosphorylase from *Saccharomyces cerevisiae*, **225**, 1027–1034.

Protein packing
Unique Side-chain Conformation Encoding for Chirality and Azimuthal Orientation in the Molecular Packing of Skin Collagen, **228**, 963–969.

Protein partial occupancy
Refinement of an Enzyme Complex with Inhibitor Bound at Partial Occupancy. Hen Egg-white Lysozyme and tri-*N*-acetylchitotriose at 1·75 Å Resolution, **224**, 613–628.

Protein pattern recognition
Predicting Protein Secondary Structure Using Neural Net and Statistical Methods, **225**, 363–377.
Docking by Least-squares Fitting of Molecular Surface Patterns, **225**, 849–858.
New Algorithm to Model Protein–Protein Recognition Based on Surface Complementarity. Applications to Antibody–Antigen Docking, **228**, 277 297.

Protein pH stability
The Crystal Structure of the *Bacillus lentus* Alkaline Protease, Subtilisin BL, at 1·4 Å Resolution, **228**, 580–595.

Protein phosphate binding
Crystal Structure of Glycinamide Ribonucleotide Transformylase from *Escherichia coli* at 3·0 Å Resolution. A Target Enzyme for Chemotherapy, **227**, 283–292.

Protein phosphorylation
Metal Ion-induced Conformational Changes of Phosphorylated Fragments of Human Neurofilament (NF-M) Protein, **223**, 673–682.
Purification and Crystallization of Glycogen Phosphorylase from *Saccharomyces cerevisiae*, **225**, 1027–1034.

Protein phylogeny
Crystal Structure of the Unique Parvalbumin Component from Muscle of the Leopard Shark (*Triakis semifasciata*). The First X-ray Study of an α-Parvalbumin, **223**, 705–720.

Protein polyhedron models
β-Trefoil Fold. Patterns of *Structure* and *Sequence* in the Kunitz Inhibitors Interleukins-1β and 1α and Fibroblast Growth Factors, **223**, 531–543.

Protein polymers
Structural Basis for the Destabilization of F-Actin by Phosphate Release Following ATP Hydrolysis, **227**, 1043–1053.

Protein pressure dissociation
Dissociation of a Native Dimer to a Molten Globule Monomer. Effects of Pressure and Dilution on the Association Equilibrium of Arc Repressor, **223**, 545–555.

Protein protein interactions
Direct Interaction Between Two *Escherichia coli Transcription* Antitermination Factors, NusB and Ribosomal Protein S10, **223**, 55–66.
Dissociation of a Native Dimer to a Molten Globule Monomer. Effects of Pressure and Dilution on the Association Equilibrium of Arc Repressor, **223**, 545–555.
Half-site Strand Transfer by Step-arrest Mutants of Yeast Site-specific Recombinase Flp, **225**, 643–649.
Crystallization, Activity Assay and Preliminary X-ray Diffraction Analysis of the Uncleaved Form of the Serpin Antichymotrypsin, **226**, +273–276.
High Resolution Functional Analysis of Antibody–Antigen Interactions, **226**, 851–865.
A Mutation in the Specificity Polypeptide of the Type I Restriction Endonuclease R · *Eco*K That Affects Subunit Assembly, **227**, 597–601.
Impact of Protein–Protein Contacts on the Conformation of Thrombin-bound Hirudin Studied by Comparison with the Nuclear Magnetic Resonance Solution Structure of Hirudin(1-51), **228**, 1206–1211.

Protein purification
kfrA Gene of Broad Host Range Plasmid RK2 Encodes a Novel DNA-binding Protein, **225**, 651–660.

Protein recognition
Specificity of Origin Recognition by Replication Initiator Protein in Plasmids of the pT181 Family is Determined by a Six Amino Acid Residue Element, **223**, 145–158.
Three-dimensional *Structure* of a Mutant Ribonuclease T_1 (Y45W) Complexed with Non-cognizable Ribonucleotide, 2′AMP, and Its Comparison with a Specific Complex with 2′GMP, **223**, 1013–1028.
Contacts between Tet Repressor and *tet* Operator Revealed by New Recognition Specificities of Single Amino Acid Replacement Mutants, **226**, 1257–1270.

Protein Rigid and adiabatic mapping
Binding of an Antiviral Agent to a Sensitive and a Resistant Human Rhinovirus. Computer Simulation Studies with Sampling of Amino Acid Side-chain Conformations. I. Mapping the Rotamers of Residue 188 of Viral Protein 1, **225**, 679–696.

Protein salt bridges
Interdomain Salt Bridges Modulate Ligand-induced Domain Motion of the Sulfate Receptor Protein for Active Transport, **223**, 27–30.
Energetic Contribution of Solvent-exposed Ion Pairs to Alpha-helix *Structure*, **223**, 343–350.
Solution Studies of Elongation Factor Tu from the Extreme Halophile *Halobacterium marismortui*, **223**, 361–371.

Protein salt effects
Modulation of Thrombin–Hirudin Interaction by Specific Ion Effects, **226**, 263–269.

Protein secondary structure
Molecular Dynamics Simulations of Helix Denaturation, **223**, 1121–1138.
The Folding of an Enzyme. III. *Structure* of the Transition State for Unfolding of Barnase Analysed by a Protein Engineering Procedure, **224**, 805–818.
The Folding of an Enzyme. V. H/^{2}H Exchange–*Nuclear Magnetic Resonance* Studies on the Folding Pathway of Barnase: Complementarity to and Agreement with Protein Engineering Studies, **224**, 837–845.
The Folding of an Enzyme. VI. The Folding Pathway [illegible] Barnase: Comparison with Theoretical Models, 2[illegible] 847–859.
Predicting Protein Secondary Structure Content. A Ta[illegible] dem Neural Network Approach, **225**, 713–727.
Predicting Protein Secondary Structure with a Neare[illegible] neighbor Algorithm, **227**, 371–374.
Fluorine-19 Nuclear Magnetic Resonance as a Probe of t[illegible] Solution Structure of Mutants of 5-Fluorouracil-subst[illegible] tuted *Escherichia coli* Valine tRNA, **227**, 1164–117[illegible]
Correlations Between Fluorine-19 Nuclear Magne[illegible] Resonance Chemical Shift and the Secondary a[illegible] Tertiary Structure of 5-Fluorouracil-substitut[illegible] tRNA, **227**, 1173–1181.
Stability of a Model β-Sheet in Water, **227**, 1244–1252.
Secondary Structure Changes Stabilize the Reactive centre Cleaved Form of SERPINs. A Study by [illegible] Nuclear Magnetic Resonance and Fourier Transfo[illegible] Infrared Spectroscopies, **228**, 1235–1254.

Protein secretion
General Mutagenesis/Gene Expression Procedure for t[illegible] Construction of Variant Immunoglobulin Domains [illegible] *Escherichia coli*. Production of the Bence-Jones P[illegible] tein REI_v *via* Fusion to β-Lactamase, **228**, 351–358.

Protein self-assembly
Terminal Disorder: A Common Structural Feature of [illegible] Axial Proteins of Bacterial Flagella, **226**, 575–579.

Protein sequence alignment
Sequence Alignment Approach to Pick Up Conformat[illegible] nally Similar Protein Fragments, **223**, 1053–1061.
Structural Consequences of Sequence Patterns in [illegible] Fingerprint Region of the Nucleotide Binding Fo[illegible] Implications for Nucleotide Specificity, **228**, 662–67[illegible]

Protein sequence analysis
Computing the Geometry of a Molecule in Dihedral An[illegible] Space Using n.m.r.-derived Constraints. A New Al[illegible] rithm Based on Optimal Filtering, **223**, 299–315.
β-Trefoil Fold. Patterns of *Structure* and *Sequence* in [illegible] Kunitz Inhibitors Interleukins-1β and 1α and Fibr[illegible] blast Growth Factors, **223**, 531–543.
Haemoglobin of the Antarctic Fish *Pagothenia bernacchi*[illegible] Amino Acid Sequence, Oxygen Equilibria and Crys[illegible] Structure of its Carbonmonoxy Derivative, 2[illegible] 449–460.
Analysis of Insertions/Deletions in Protein Structur[illegible] **224**, 461–471.
Correlation of Co-ordinated Amino Acid Changes at t[illegible] Two-domain Interface of Cysteine Proteases with P[illegible] tein Stability, **224**, 501–509.
Predicting Protein Secondary Structure Content. A T[illegible] dem Neural Network Approach, **225**, 713–727.
A Hybrid System for Protein Secondary *Structure Pred*[illegible] *tion*, **225**, 1049–1063.
Primary Structure of the Second Largest Subunit [illegible] Human RNA Polymerase II (or B), **226**, 1295–1299.
Characterization of a Conserved Carboxy-termin[illegible] Sequence in Secreted Proteins and a Motif Implicat[illegible] in Extracellular Protein Interactions, **227**, 367–370.

Protein sequence comparison
Recognition of Distantly Related Protein Sequen[illegible] Using Conserved Motifs and Neural Networks, 2[illegible] 951–962.

Protein sequence motifs
Discrimination of the $(\beta/\alpha)_8$-Barrel Fold, **228**, 170–187.

Protein sequence patterns
Recognition of Distantly Related Protein Sequen[illegible] Using Conserved Motifs and Neural Networks, 2[illegible] 951–962.

Protein sequencing
Sequences of 20 Subunits of NADH:Ubiquinone Oxido[illegible] ductase from Bovine Heart Mitochondria. Applicati[illegible] of a Novel Strategy for Sequencing Proteins Using t[illegible] Polymerase Chain Reaction, **226**, 1051–1072.

Protein side chain positions
Accurate Modeling of Protein Conformation by Au[illegible] matic Segment Matching, **226**, 507–533.

n signal sequence
Signal Sequences Containing Multiple Aromatic Residues, **224**, 77–85.

n simulated annealing
Refined Solution Structure and Ligand-binding Properties of PDC-109 Domain b. A Collagen-binding Type II Domain, **223**, 281–298.
Crystal Structure of the Unique Parvalbumin Component from Muscle of the Leopard Shark (*Triakis semifasciata*). The First X-ray Study of an α-Parvalbumin, **223**, 705–720.
Structure of an Isolated Gramicidin A Double Helical Species by High-resolution Nuclear Magnetic Resonance, **226**, 1101–1109.

n solubility
Effects of Glycosylation on the Folding and Stability of Human, Recombinant and Cleaved α_1-Antitrypsin, **224**, 241–252.

n solvent contact model
Evaluation of Protein Models by Atomic Solvation Preference, **225**, 93–105.

n solvent modelling
The Interdependence of Protein Surface Topography and Bound Water Molecules Revealed by Surface Accessibility and Fractal Density Measures, **228**, 13–22.

n sorting
Changing the Specificity of the Sorting Receptor for Luminal Endoplasmic Reticulum Proteins, **224**, 1–5.
Sequence of a Second Human KDEL Receptor, **226**, 913–916.

n stability
Kinetic Coupling between Protein Folding and Prolyl Isomerization. II. Folding of Ribonuclease A and Ribonuclease T_1, **224**, 231–240.
Analysis of Non-polar Regions in Proteins, **224**, 629–638.
Co-operative Interactions during Protein Folding, **224**, 733–740.
Effect of Active Site Residues in Barnase on Activity and Stability, **225**, 585–589.
Thermodynamic Consequences of the Removal of a Disulphide Bridge from Hen Lysozyme, **225**, 939–943.
Aromatic–Aromatic Interactions in the Zinc Finger Motif. Analysis of the Two-dimensional *Nuclear Magnetic Resonance* Structure of a Mutant Domain, **225**, 1035–1047.
Contribution of the Hydrophobic Effect to Globular Protein Stability, **226**, 29–35.
Structure Determination and Analysis of Yeast Iso-2-cytochrome *c* and a Composite Mutant Protein, **227**, 160–176.
Topology Fingerprint Approach to the Inverse Protein Folding Problem, **227**, 227–238.
Prediction of the Activity and Stability Effects of Site-directed Mutagenesis on a Protein Core, **227**, 389–395.
α-Helix Stability in Proteins. I. Empirical Correlations Concerning Substitution of Side-chains at the N and C-caps and the Replacement of Alanine by Glycine or Serine at Solvent-exposed Surfaces, **227**, 544–559.
α-Helix Stability in Proteins. II. Factors that Influence Stability at an Internal Position, **227**, 560–568.
Amino Acid Preferences of Small Proteins. Implications for Protein Stability and Evolution, **227**, 991–995.

n structural motifs
Orthogonal ββ Motifs in Proteins, **223**, 845–851.

n structure
Proline *Cis–Trans* Isomers in Calbindin D_{9k} Observed by X-ray Crystallography, **223**, 601–606.
Determination of the Nuclear Magnetic Resonance Solution Structure of the DNA-binding Domain (Residues 1 to 69) of the 434 Repressor and Comparison with the X-ray Crystal Structure, **223**, 743–767.
Analysis of Insertions/Deletions in Protein Structures, **224**, 461–471.
Taxonomy and Conformational Analysis of Loops in Proteins, **224**, 685–699.
His92Ala Mutation in Ribonuclease T_1 Induces Segmental Flexibility. *An X-ray Study*, **224**, 701–713.
Dissection of an Enzyme by Protein Engineering. The N and C-Terminal Fragments of Barnase Form a Native-like Complex with Restored Enzymic Activity, **224**, 741–747.
An N-terminal Fragment of Barnase has Residual Helical Structure Similar to that in a Refolding Intermediate, **224**, 749–758.
The Folding of an Enzyme. IV. Structure of an Intermediate in the Refolding of Barnase Analysed by a Protein Engineering Procedure, **224**, 819–835.
Human Interleukin 4. The Solution *Structure* of a Four-helix Bundle Protein, **224**, 899–904.
Crystallization and Oligomeric Structure of Rat Liver Arginase, **224**, 1175–1177.
Common Spatial Arrangements of Backbone Fragments in Homologous and Non-homologous Proteins, **225**, 5–9.
Crystal and Molecular *Structure* of the Bovine α-Chymotrypsin–Eglin *c* Complex at 2·0 Å Resolution, **225**, 107–123.
Comparison of the Solution Conformations of Human $[Zn_7]$-metallothionein-2 and [Cd]-metallothionein-2 using Nuclear Magnetic Resonance Spectroscopy, **225**, 433–443.
Membrane Protein Structure Prediction. Hydrophobicity Analysis and the Positive-inside Rule, **225**, 487–494.
Ulysses Transposable Element of *Drosophila* Shows High Structural Similarities to Functional Domains of Retroviruses, **225**, 917–924.
A 9 Å Two-dimensional Projected *Structure* of Cholera Toxin B-subunit–G_{M1} Complexes Determined by Electron *Crystallography*, **226**, 23–28.
Contribution of the Hydrophobic Effect to Globular Protein Stability, **226**, 29–35.
^{1}H Nuclear Magnetic Resonance Studies of the Interaction of Urea with Hen Lysozyme. Origins of the Conformational Change Induced in Hen Lysozyme by *N*-Acetylglucosamine Oligosaccharides, **227**, 9–14.
Structure Determination and Analysis of Yeast Iso-2-cytochrome *c* and a Composite Mutant Protein, **227**, 160–176.
Structure of Scorpion Toxin Variant-3 at 1·2 Å Resolution, **227**, 239–252.
Human Epidermal Growth Factor. High Resolution Solution Structure and Comparison with Human Transforming Growth Factor α, **227**, 271–282.
Site-directed Mutagenesis of the GTP-binding Domain of β-Tubulin, **227**, 307–321.
Determination of a High-quality Nuclear Magnetic Resonance Solution Structure of the Bovine Pancreatic Trypsin Inhibitor and Comparison with Three Crystal Structures, **227**, 757–775.
X-ray Structure Determination of Telokin, the C-terminal Domain of Myosin Light Chain Kinase, at 2·8 Å Resolution, **227**, 840–851.
Binding of the Dye Congo Red to the Amyloid Protein Pig Insulin Reveals a Novel Homology amongst Amyloid-forming Peptide Sequences, **227**, 1205–1223.
Homonuclear Three-dimensional NOE–NOE Nuclear Magnetic Resonance Spectra for Structure Determination of Proteins in Solution, **228**, 156–169.
Crystallization, Structure Determination and Least-squares Refinement to 1·75 Å Resolution of the Fatty-acid-binding Protein Isolated from *Manduca sexta* L., **228**, 208–219.
Anatomy and Evolution of Proteins Displaying the Viral Capsid Jellyroll Topology, **228**, 220–242.
Biochemical Characterization of the Major Structural Domain, **228**, 652–661.
Three-dimensional Structure of the High-potential Iron–Sulfur Protein Isolated from the Purple Phototrophic Bacterium *Rhodocyclus tenuis* Determined and Refined at 1·5 Å Resolution, **228**, 672–686.
Isolation, Crystallization, Crystal Structure Analysis and Refinement of B-Phycoerythrin from the Red Alga

Porphyridium sordidum at 2·2 Å Resolution, **228**, 935–950.
Nuclear Magnetic Resonance Solution Structure of Hirudin(1-51) and Comparison with Corresponding Three-dimensional Structures Determined using the Complete 65-Residue Hirudin Polypeptide Chain, **228**, 1193–1205.
Determination of the Solution Structures of Domains II and III of Protein G from *Streptococcus* by ^{1}H Nuclear Magnetic Resonance, **228**, 1219–1234.

Protein structure analysis
Docking by Least-squares Fitting of Molecular Surface Patterns, **225**, 849–858.

Protein structure comparison
Analysis of Insertions/Deletions in Protein Structures, **224**, 461–471.
Common Spatial Arrangements of Backbone Fragments in Homologous and Non-homologous Proteins, **225**, 5–9.
Structural Consequences of Sequence Patterns in the Fingerprint Region of the Nucleotide Binding Fold. Implications for Nucleotide Specificity, **228**, 662–671.

Protein structure prediction
Computing the Geometry of a Molecule in Dihedral Angle Space Using n.m.r.-derived Constraints. A New Algorithm Based on Optimal Filtering, **223**, 299–315.
Predicting Protein Secondary Structure Using Neural Net and Statistical Methods, **225**, 363–377.
Membrane Protein Structure Prediction. Hydrophobicity Analysis and the Positive-inside Rule, **225**, 487–494.
Predicting Protein Secondary Structure Content. A Tandem Neural Network Approach, **225**, 713–727.
A Hybrid System for Protein Secondary *Structure Prediction*, **225**, 1049–1063.
Hydrogen Bonding in Globular Proteins, **226**, 1143–1159.
Topology Fingerprint Approach to the Inverse Protein Folding Problem, **227**, 227–238.
Predicting Protein Secondary Structure with a Nearest-neighbor Algorithm, **227**, 371–374.
Prediction of the Activity and Stability Effects of Site-directed Mutagenesis on a Protein Core, **227**, 389–395.
Contact Potential that Recognizes the Correct Folding of Globular Proteins, **227**, 876–888.
Prediction of Protein Folding Pathways, **227**, 901–916.
Discrimination of the $(\beta/\alpha)_8$-Barrel Fold, **228**, 170–187.
New Algorithm to Model Protein–Protein Recognition Based on Surface Complementarity. Applications to Antibody–Antigen Docking, **228**, 277–297.

Protein structure probing
De novo Design, Synthesis and Study of Albebetin, a Polypeptide with a Predetermined Three-dimensional Structure. Probing the Structure at the Nanogram Level, **225**, 927–931.

Protein super-secondary structures
Orthogonal $\beta\beta$ Motifs in Proteins, **223**, 845–851.

Protein surface
Thermodynamics of Unfolding of the α-Amylase Inhibitor Tendamistat. Correlations Between Accessible Surface Area and Heat Capacity, **223**, 769–779.
Probing Protein Structure by Solvent Perturbation of *Nuclear Magnetic Resonance* Spectra. Nuclear Magnetic Resonance Spectral Editing and Topological Mapping in Proteins by Paramagnetic Relaxation Filtering, **224**, 659–670.
The Interdependence of Protein Surface Topography and Bound Water Molecules Revealed by Surface Accessibility and Fractal Density Measures, **228**, 13–22.

Protein surface complementarity
New Algorithm to Model Protein–Protein Recognition Based on Surface Complementarity. Applications to Antibody–Antigen Docking, **228**, 277–297.

Protein synthesis
Refined Structure of Elongation Factor EF-Tu from *Escherichia coli*, **223**, 721–742.
Kinetic Properties of *Escherichia coli* Ribosomes with Altered Forms of S12, **224**, 1011–1027.
Ribosomal RNA Identity Elements for Ricin A-ch… Recognition and Catalysis. Analysis with Tetralo… Mutants, **226**, 411–424.
Effect of Sequence Mutations on the Higher Order Str… ture of the Yeast 5 S rRNA, **226**, 1027–1035.

Protein thermodynamics
Molecular Basis of Co-operativity in Protein Folding. I… Structural Identification of Cooperative Folding Un… and Folding Intermediates, **227**, 293–306.

Protein toxicity
Role of Residue Glu152 in the Discrimination betwe… Transfer RNAs by Tyrosyl-tRNA Synthetase fr… *Bacillus stearothermophilus*, **223**, 801–810.

Protein transport
Signal Sequences Containing Multiple Aromatic Residu… **224**, 77–85.
Biogenesis of Outer Membrane Protein PhoE of *Esch*… *chia coli*. Evidence for Multiple SecB-binding Sites… the Mature Portion of the PhoE Protein, **224**, 369–3…

Protein triple helix
New Triple-helical Model for the Shaft of the Adenovi… Fibre, **226**, 1073–1084.

Protein truncated
Inhibitory Effects of N-and C-terminal Truncated *Esch*… *ichia coli recA* Gene Products on Functions of … Wild-type *recA* Gene, **223**, 105–114.

Protein tryptophan stacking
Atomic Interactions in Protein–Carbohydrate Comple… Tryptophan Residues in the Periplasmic Maltodext… Receptor for Active Transport and Chemotaxis, **2**… 15–22.

Protein turns
Loop Mutations Can Cause a Substantial Conformatio… Change in the Carboxy Terminus of the Ferritin H… tein, **227**, 532–543.

Protein two-state model
Kinetic Coupling between Protein Folding and Pro… Isomerization. I. Theoretical Models, **224**, 217–229…

Protein type III domain
Domain Structure and Domain–Domain Interactions… the Carboxy-terminal Heparin Binding Region of Fi… nectin, **227**, 1182–1191.

Protein type VIII β-turns
Orthogonal $\beta\beta$ Motifs in Proteins, **223**, 845–851.

Protein unfolded state
A Peptide Model for Proline Isomerism in the Unfol… State of Staphylococcal Nuclease, **228**, 343–346.

Protein water interactions
The Interdependence of Protein Surface Topography … Bound Water Molecules Revealed by Surface Acce… ibility and Fractal Density Measures, **228**, 13–22.

Protein zinc finger
Specific Interaction of the First Three Zinc Fingers … TFIIIA with the Internal Control Region of the *Xe*… *pus* 5 S RNA Gene, **223**, 857–871.
Sequence-specific DNA Binding by a Two Zinc-finger P… tide from the *Drosophila melanogaster* Tramtrack … tein, **226**, 349–366.

Protein zinc ligand
Crystal Structure of the Complex between Carboxype… dase A and the Biproduct Analog Inhibitor L-Benzy… succinate at 2·0 Å Resolution, **223**, 573–578.
NAM7 Nuclear Gene Encodes a Novel Member o… Family of Helicases with a Zn-ligand Motif and… Involved in Mitochondrial Functions in *Saccharomy*… *cerevisiae*, **224**, 575–587.
Crystal Structure of Yeast Cu,Zn Superoxide Dismut… *Crystallographic* Refinement at 2·5 Å Resolution, **2**… 791–809.
Crystal Structure Solution and Refinement of the Semis… thetic Cobalt-substituted Bovine Erythrocyte Su… oxide Dismutase at 2·0 Å Resolution, **226**, 227–238…

Protein zipper-like binding
Energy-optimized *Structure* of Antifreeze Protein and… Binding Mechanism, **223**, 509–517.

nase
Crystallization and Preliminary X-ray Investigation of Proteinase A, a Non-pepsin-type Acid Proteinase from *Aspergillus niger* var. *macrosporus*, **223**, 373–375.

nase aspartic
Crystallization and Preliminary X-ray Analysis of Complexes of Peptide Inhibitors with Human Recombinant and Mouse Submandibular Renins, **223**, 447–453.
Purification and Crystallization of Human Cathepsin D, **226**, 555–557.
Crystallization and Preliminary X-ray Diffraction Studies of Aspartic Proteinase from *Irpex lacteus*, **226**, 1291–1293.

nase inhibitor
Crystal Structure of α-Dendrotoxin from the Green Mamba Venom and its Comparison with the Structure of Bovine Pancreatic Trypsin Inhibitor, **224**, 671–683.
Crystal and Molecular *Structure* of the Bovine α-Chymotrypsin–Eglin *c* Complex at 2·0 Å Resolution, **225**, 107–123.
Binding of Hirudin to Human α, β and γ-Thrombin. A Comparative Kinetic and Thermodynamic Study, **225**, 177–184.

nases serine
Crystal and Molecular *Structure* of the Bovine α-Chymotrypsin–Eglin *c* Complex at 2·0 Å Resolution, **225**, 107–123.

transfer
Computer Simulation of the Initial Proton Transfer Step in Human Carbonic Anhydrase I, **224**, 7–14.
Electrostatic Calculations of the pK_a Values of Ionizable Groups in Bacteriorhodopsin, **224**, 473–486.

oan parasite
Genomic Organization and Context of a Trypanosome Variant Surface Glycoprotein Gene Family, **225**, 961–971.
Sequence Divergence among Members of a Trypanosome Variant Surface Glycoprotein Gene Family, **225**, 973–983.

genes
Acyl-CoA-binding Protein/Diazepam-binding Inhibitor Gene and Pseudogenes. A Typical Housekeeping Gene Family, **228**, 1011–1022.

monas
Crystallization and Preliminary X-ray Study of a Lipase from *Pseudomonas glumae*, **224**, 281–282.
Functional Structures of the RecA Protein Found by Chimera Analysis, **226**, 651–660.
RNA Processing Modulates the Expression of the *arcDABC* Operon in *Pseudomonas aeruginosa*, **226**, 943–957.
Crystallization and Preliminary X-ray Crystallographic Analysis of Lipase from *Pseudomonas cepacia*, **227**, 1258–1262.

phosphatase
Crystallization and Preliminary Crystallographic Data of Purple Acid Phosphatase from Red Kidney Bean, **224**, 511–513.

tal phosphate
X-ray Structure Refinement and Comparison of Three Forms of Mitochondrial Aspartate Aminotransferase, **225**, 495–517.

line methylation
DNA Curvature does not require Bifurcated Hydrogen Bonds or Pyrimidine Methyl Groups, **225**, 729–738.

te kinase
Key Residues in the Allosteric Transition of *Bacillus stearothermophilus* Pyruvate Kinase Identified by Site-directed Mutagenesis, **228**, 265–276.

The *Escherichia coli rpoB60* Mutation Blocks Antitermination by Coliphage HK022 *Q*-function, **227**, 29–37.

Quinoprotein
Crystallization and Preliminary Crystallographic Investigation of Methanol Dehydrogenase from *Methylobacterium extorquens* AM1, **228**, 302–305.

Raman scattering
Investigations on the Dynamic Structures of Adenine-and Thymine-containing DNA, **223**, 455–476.

Rat Clara cell
Refined *Structure* of Rat Clara Cell 17 kDa Protein at 3·0 Å Resolution, **224**, 441–448.

Reaction field
Taming Cut-off Induced Arifacts in Molecular Dynamics Studies of Solvated Polypeptides. The Reaction Field Method, **228**, 909–923.

RecA protein
RecA Protein-promoted Homologous Pairing and Strand Exchange between Intact and Partially Single-stranded Duplex DNA, **223**, 79–93.
Inhibitory Effects of N-and C-terminal Truncated *Escherichia coli recA* Gene Products on Functions of the Wild-type *recA* Gene, **223**, 105–114.
C-terminal Truncated *Escherichia coli* RecA Protein RecA5327 Has Enhanced Binding Affinities to Single- and Double-stranded DNAs, **223**, 115–129.
Genetical and Biochemical Evidence for the Involvement of the Coprotease Domain of *Escherichia coli* RecA Protein in Recombination, **223**, 823–829.
Direct Visualization of Dynamics and Co-operative Conformational Changes within RecA Filaments That Appear to be Associated with the Hydrolysis of Adenosine 5′-O-(3-Thiotriphosphate), **225**, 193–216.
Isolation and Characterization of LexA Mutant Repressors with Enhanced DNA Binding Affinity, **225**, 609–620.
Unwinding of Heterologous DNA by RecA Protein during the Search for Homologous *Sequences*, **226**, 127–139.
Functional Structures of the RecA Protein Found by Chimera Analysis, **226**, 651–660.
Activation of RecA Protein. The Open Helix Model for LexA Cleavage, **226**, 707–719.
Structure of RecA–DNA Complexes Studied by Combination of Linear Dichroism and Small-angle Neutron Scattering Measurements on Flow-oriented Samples, **226**, 1175–1191.
Structure of DNA–RecA Complexes Studied by Residue Differential Linear Dichroism and Fluorescence Spectroscopy for a Genetically Engineered RecA Protein, **226**, 1193–1205.
Structural Data Suggest that the Active and Inactive Forms of the RecA Filament are not Simply Interconvertible, **227**, 334–346.
In Vitro Analysis of Mutant LexA Proteins with an Increased Rate of Specific Cleavage, **228**, 395–408.
Early Stages in RecA Protein-catalyzed Pairing. Analysis of Coaggregate Formation and Non-homologous DNA Contacts, **228**, 409–420.

recB recC sbcA
Effect of Terminal Non-homology on Intramolecular Recombination of Linear Plasmid Substrates in *Escherichia coli*, **227**, 72–80.

Receptor
1·7 Å X-ray Structure of the Periplasmic Ribose Receptor from *Escherichia coli*, **225**, 155–175.
Thermal Motions of Surface α-Helices in the D-Galactose Chemosensory Receptor. Detection by Disulfide Trapping, **226**, 1219–1235.
Ribose and Glucose–Galactose Receptors. Competitors in Bacterial Chemotaxis, **227**, 418–440.

Recombinase
Site-specific Recombinase, R, Encoded by Yeast Plasmid pSR1, **225**, 25–37.
Half-site Recombinations Mediated by Yeast Site-specific Recombinases Flp and R, **225**, 621–642.

Recombination
T4 Endonuclease VII Resolves Cruciform DNA with Nick and Counter-nick and Its Activity is Directed by Local Nucleotide Sequence, **223**, 607–615.
Mutagenesis of a Conserved Region of the Gene Encoding the FLP Recombinase of *Saccharomyces cerevisiae*. A Role for Arginine 191 in Binding and Ligation, **225**, 313–326.
Half-site Recombinations Mediated by Yeast Site-specific Recombinases Flp and R, **225**, 621–642.
Half-site Strand Transfer by Step-arrest Mutants of Yeast Site-specific Recombinase Flp, **225**, 643–649.
Recombination Between Adenovirus Type 12 DNA and a Hamster Preinsertion Sequence in a Cell-free System. Patch Homologies and Fractionation of Nuclear Extracts, **226**, 117–126.

Recombination site specific
Identification of Cryptic *lox* Sites in the Yeast Genome by Selection for Cre-mediated Chromosome Translocations that Confer Multiple Drug Resistance, **223**, 911–928.
Site-specific Recombinase, R, Encoded by Yeast Plasmid pSR1, **225**, 25–37.
Half-site Recombinations Mediated by Yeast Site-specific Recombinases Flp and R, **225**, 621–642.
Half-site Strand Transfer by Step-arrest Mutants of Yeast Site-specific Recombinase Flp, **225**, 643–649.
Cre-*lox* Recombination in *Escherichia coli* Cells. Mechanistic Differences from the *in Vitro* Reaction, **226**, 661–673.

Red alga
Large ATP Synthase Operon of the Red Alga *Antithamnion* sp. Resembles the Corresponding Operon in Cyanobacteria, **227**, 961–970.

Redox protein
Effect of the Asn-52→Ile Mutation on the Redox Potential of Yeast Cytochrome *c*. Theory and Experiment, **224**, 589–600.
Crystallization and Preliminary X-ray Crystallographic Studies of Rusticyanin from *Thiobacillus ferrooxidans*, **227**, 581–582.
Structure of Oxidized Bacteriophage T4 Glutaredoxin (Thioredoxin). Refinement of Native and Mutant Proteins, **228**, 596–618.
Three-dimensional Structure of the High-potential Iron–Sulfur Protein Isolated from the Purple Phototrophic Bacterium *Rhodocyclus tenuis* Determined and Refined at 1·5 Å Resolution, **228**, 672–686.

Renin
Crystallization and Preliminary X-ray Analysis of Complexes of Peptide Inhibitors with Human Recombinant and Mouse Submandibular Renins, **223**, 447–453.

RepA
Differential Binding of Wild-type and a Mutant RepA Protein to *oriR* Sequence Suggests a Model for the Initiation of Plasmid R1 Replication, **228**, 787–802.

Replication origins
Role of MotA Transcription Factor in Bacteriophage T4 DNA Replication, **228**, 88–100.

Replication terminus
Definition and Polarity of Action of DNA Replication Terminators in *Bacillus subtilis*, **227**, 648–657.

Repressor
Repression of the *araBAD* Promoter from $araO_1$, **224**, 335–341.
Arginine Regulon of *Escherichia coli* K-12. A Study of Repressor–Operator Interactions and of *in Vitro* Binding Affinities *versus in Vivo* Repression, **226**, 367–386.
Specific Interactions Between the IclR Repressor of the Acetate Operon of *Escherichia coli* and its Operator, **228**, 23–29.
Thermodynamic Stoichiometries of Participation of Water, Cations and Anions in Specific and Non-specific Binding of *lac* Repressor to DNA. Possible Thermodynamic Origins of the "Glutamate Effect" on Protein–DNA Interactions, **228**, 252–264.
Messenger RNA Secondary Structure and Translation Coupling in the *Escherichia coli* Operon Encoding Translation Initiation Factor IF3 and the Ribosomal Proteins, L35 and L20, **228**, 366–386.
In Vitro Analysis of Mutant LexA Proteins with Increased Rate of Specific Cleavage, **228**, 395–408.

Repressor, 434
Determination of the Nuclear Magnetic Resonance Solution Structure of the DNA-binding Domain (Residues 1 to 69) of the 434 Repressor and Comparison with the X-ray Crystal Structure, **223**, 743–767.

Repressor arginine
Characterization of the Arginine Repressor from *Salmonella typhimurium* and its Interactions with the *car* Operator, **225**, 11–24.
Arginine Regulon of *Escherichia coli* K-12. A Study of Repressor–Operator Interactions and of *in Vitro* Binding Affinities *versus in Vivo* Repression, **226**, 367–3

Repressor binding domain
Crystallization and Preliminary X-ray Studies on the repressor Binding Domain of the *Escherichia coli* Pi ine Repressor, **225**, 1131–1133.

Repressor *gal*
Regulation of Open Complex Formation at the *Escherichia coli* Galactose Operon Promoters. Simultaneous Interaction of RNA Polymerase, *gal* Repressor a CAP/cAMP, **224**, 15–29.
Isorepressor of the *gal* Regulon in *Escherichia coli*, 2 69–83.

Repressor hexameric
Binding of the Arginine Repressor of *Escherichia coli* I to its Operator Sites, **226**, 387–397.

Repressor *lac*
How Lac Repressor Finds *lac* Operator *in Vitro*, 2 59–68.

repressor *lac*
Thermodynamic Stoichiometries of Participation a Water, Cations and Anions in Specific and Non-spec Binding of *lac* Repressor to DNA. Possible Therm dynamic Origins of the "Glutamate Effect" on P tein–DNA Interactions, **228**, 252–264.
Interlocking of Plasmid DNAs due to *Lac* Repress Operator Interaction, **228**, 1104–1114.

Repressor LexA
Isolation and Characterization of LexA Mutant Repr sors with Enhanced DNA Binding Affinity, 2 609–620.
Activation of RecA Protein. The Open Helix Model LexA Cleavage, **226**, 707–719.

λ repressor
Refined 1·8 Å Crystal Structure of the λ Repress Operator Complex, **227**, 177–196.

Repressor Tet
Contacts between Tet Repressor and *tet* Opera Revealed by New Recognition Specificities of Sin Amino Acid Replacement Mutants, **226**, 1257–127

Repressor–operator interaction
Binding of the Arginine Repressor of *Escherichia coli* I to its Operator Sites, **226**, 387–397.
Specific Interactions Between the IclR Repressor of t Acetate Operon of *Escherichia coli* and its Opera **228**, 23–29.

Resonance Raman
Conformational Interconversion in Protein Crystals, 2 207–215.

Respiratory chain
Characterization of Assembly Intermediates NADH : Ubiquinone Oxidoreductase (Complex Accumulated in *Neurospora* Mitochondria by G Disruption, **227**, 1032–1042.

Restriction endonuclease
McrBC: a Multisubunit GTP-dependent Restricti Endonuclease, **225**, 327–348.

Formation of the Right before the Left Mature DNA End during Packaging–Cleavage of Bacteriophage T7 DNA Concatemers, **226**, 311–317.
Structure-related Properties of the Mutagenic Lesion 6-*O*-Methylguanine in DNA, **228**, 1137–1146.

se transcriptase
Preferential Interaction of Human Immunodeficiency Virus Reverse Transcriptase with Two Regions of Primer $tRNA^{Lys}$ as Evidenced by Footprinting Studies and Inhibition with Synthetic Oligoribonucleotides, **226**, 1–6.

)virus
Binding of an Antiviral Agent to a Sensitive and a Resistant Human Rhinovirus. Computer Simulation Studies with Sampling of Amino Acid Side-chain Conformations. I. Mapping the Rotamers of Residue 188 of Viral Protein 1, **225**, 679–696.
Binding of an Antiviral Agent to a Sensitive and a Resistant Human Rhinovirus. Computer Simulation Studies with Sampling of Amino Acid Side-chain Conformations. II. Calculation of Free-energy Differences by Thermodynamic Integration, **225**, 697–712.
Preliminary X-ray *Crystallographic* Analysis of Intercellular Adhesion Molecule-1, **225**, 1127–1130.

bium
From Adenylate Cyclase to Guanylate Cyclase. Mutational Analysis of a Change in Substrate Specificity, **225**, 933–938.
Nucleotide Sequence and Organization of an H_2-uptake Gene Cluster from *Rhizobium leguminosarum* bv. viciae Containing a Rubredoxin-like Gene and Four Additional Open Reading Frames, **228**, 998–1002.

bacter
σ-Aminolevulinate Couples *cycA* Transcription To Changes in Heme Availability in *Rhodobacter sphaeroides*, **226**, 101–115.
Structure of Porin Refined at 1·8 Å Resolution, **227**, 493–509.

botin genes
The Rhombotin Gene Family Encode Related LIM-domain Proteins whose Differing Expression Suggests Multiple Roles in Mouse Development, **226**, 747–761.

e receptor
1·7 Å X-ray Structure of the Periplasmic Ribose Receptor from *Escherichia coli*, **225**, 155–175.

avin synthase
Electron Microscopy of Decorated *Crystals* for the Determination of Crystallographic Rotation and Translation Parameters in Large Protein Complexes, **225**, 1065–1073.

uclease
Newly Observed Binding Mode in Pancreatic Ribonuclease, **224**, 265–267.
His92Ala Mutation in Ribonuclease T_1 Induces Segmental Flexibility. *An X-ray Study*, **224**, 701–713.
Crystal Packing in Six Crystal Forms of Pancreatic Ribonuclease, **228**, 243–251.
Crystallization and Preliminary X-ray Diffraction Analysis of a Plant Ribonuclease from the Seeds of the Bitter Gourd *Momordica charantia*, **228**, 1271–1273.

uclease E
Interdependence of *Translation*, *Transcription* and mRNA Degradation in the *lacZ* Gene, **226**, 581–596.
Cloning and Analysis of the Entire *Escherichia coli ams* Gene. *arms* is Identical to *hmp1* and Encodes a 114 kDa Protein that Migrates as a 180 kDa Protein, **228**, 30–40.
Structural Requirements for the Processing of *Escherichia coli* 5 S Ribosomal RNA by RNase E *in Vitro*, **228**, 1078–1090.

uclease III cleavage
Mechanism of Killer Gene Activation. Antisense RNA-dependent RNase III Cleavage Ensures Rapid Turnover of the Stable Hok, SrnB and PndA Effector Messenger RNAs, **226**, 637–649.

Ribonuclease P
Important 2′-hydroxyl Groups in Model Substrates for M1 RNA, the Catalytic RNA Subunit of RNase P from *Escherichia coli*, **226**, 399–409.
Several Regions of a tRNA Precursor Determine the *Escherichia coli* RNase P Cleavage Site, **227**, 1019–1031.

Ribonuclease T_1
Three-dimensional *Structure* of a Mutant Ribonuclease T_1 (Y45W) Complexed with Non-cognizable Ribonucleotide, 2′AMP, and Its Comparison with a Specific Complex with 2′GMP, **223**, 1013–1028.
The RNase T_1 Mutant Glu46Gln Binds the Inhibitors 2′GMP and 2′AMP at the 3′ Subsite, **225**, 533–542.

Ribonuclease T1
Structural Requirements for Viroid Processing by RNase T1, **227**, 719–737.

Ribonucleoprotein
Direct Binding of Small Nuclear Ribonucleoprotein G to the Sm Site of Small Nuclear RNA. Ultraviolet Light Cross-linking of Protein G to the AAU Stretch Within the Sm Site (AAUUUGUGG) of U1 Small Nuclear Ribonucleoprotein Reconstituted *in Vitro*, **227**, 15–28.
Ro Ribonucleoprotein Assembly *In Vitro*. Identification of RNA–Protein and Protein–Protein Interactions, **227**, 361–366.

Ribonucleoprotein complexes
Ro Ribonucleoprotein Assembly *In Vitro*. Identification of RNA–Protein and Protein–Protein Interactions, **227**, 361–366.

Ribonucleoprotein Ro
Ro Ribonucleoprotein Assembly *In Vitro*. Identification of RNA–Protein and Protein–Protein Interactions, **227**, 361–366.

Ribosomal DNA
Numerous Group I Introns with Variable Distributions in the Ribosomal DNA of a Lichen Fungus, **228**, 315–321.

Ribosomal frameshifting
Mutational Analysis of the "Slippery-sequence" Component of a Coronavirus Ribosomal Frameshifting Signal, **227**, 463–479.

Ribosomal RNA
Ribosomal RNA Identity Elements for Ricin A-chain Recognition and Catalysis. Analysis with Tetraloop Mutants, **226**, 411–424.
Effect of Sequence Mutations on the Higher Order Structure of the Yeast 5 S rRNA, **226**, 1027–1035.
Structure Analysis of the 5′ External Transcribed Spacer of the Precursor Ribosomal RNA From *Saccharomyces cerevisiae*, **228**, 827–839.

Ribosomal RNA 5S
Kinetic Control of 5 S RNA Gene Transcription, **227**, 1009–1018.
Topography of Transcription Factor Complexes on the *Saccharomyces cerevisiae* 5 S RNA Gene, **228**, 1063–1077.
Structural Requirements for the Processing of *Escherichia coli* 5 S Ribosomal RNA by RNase E *in Vitro*, **228**, 1078–1090.
Zinc Induces a Bend Within the Transcription Factor IIIA-binding Region of the 5 S RNA Gene, **228**, 1115–1123.

Ribosomal RNA structure
Structure Analysis of the 5′ External Transcribed Spacer of the Precursor Ribosomal RNA From *Saccharomyces cerevisiae*, **228**, 827–839.

Ribosomal RNA transcribed spacer
Structure Analysis of the 5′ External Transcribed Spacer of the Precursor Ribosomal RNA From *Saccharomyces cerevisiae*, **228**, 827–839.

Ribosome
Leftward Ribosome Frameshifting at a Hungry Codon, **223**, 31–40.
Functional Analysis of Internal Transcribed Spacer 2 of *Saccharomyces cerevisiae* Ribosomal DNA, **223**, 899–910.
Importance of mRNA Folding and Start Codon Accessibility in the Expression of Genes in a Ribosomal Protein Operon of *Escherichia coli*, **224**, 949–966.
Kinetic Properties of *Escherichia coli* Ribosomes with Altered Forms of S12, **224**, 1011–1027.
Crystallization and Preliminary X-ray Crystallographic Analysis of *Mirabilis* Antiviral Protein, **226**, 281–283.
Eukaryotic Initiation Factor 3 Does Not Prevent Association through Physical Blockage of the Ribosomal Subunit–Subunit Interface, **226**, 301–304.
Ribosomal RNA Identity Elements for Ricin A-chain Recognition and Catalysis. Analysis with Tetraloop Mutants, **226**, 411–424.
Culture Conditions Differentially Affect the *ranslation* of Individual *Escherichia coli* mRNAs, **226**, 597–608.
Non-competitive Inhibition of Group I Intron RNA Self-splicing by Aminoglycoside Antibiotics, **226**, 935–941.
Effect of Sequence Mutations on the Higher Order Structure of the Yeast 5 S rRNA, **226**, 1027–1035.
Two tRNA-binding Sites in Addition to A and P Sites on Eukaryotic Ribosomes, **228**, 450–459.

Ribozyme
Sequence and Structure of the Catalytic RNA of Hepatitis Delta Virus Genomic RNA, **223**, 233–245.
Circle Reopening in the *Tetrahymena* Ribozyme Resembles Site-specific Hydrolysis at the 3′ Splice Site, **223**, 351–360.
Preformed Ribozyme Destroys Tumour Necrosis Factor mRNA in Human Cells, **223**, 831–835.
Co-optimization of Ribozyme Substrate Stacking and L-Arginine Binding, **225**, 945–949.
Non-competitive Inhibition of Group I Intron RNA Self-splicing by Aminoglycoside Antibiotics, **226**, 935–941.

Ricin
Ribosomal RNA Identity Elements for Ricin A-chain Recognition and Catalysis. Analysis with Tetraloop Mutants, **226**, 411–424.
X-ray Analysis of Substrate Analogs in the Ricin A-chain Active Site, **227**, 1136–1145.

Ring proteins
Organization and Ordered Expression of *Caulobacter* Genes Encoding Flagellar Basal Body Rod and Ring Proteins, **228**, 1147–1162.

RNA
Circle Reopening in the *Tetrahymena* Ribozyme Resembles Site-specific Hydrolysis at the 3′ Splice Site, **223**, 351–360.

RNA antisense
Mechanism of Killer Gene Activation. Antisense RNA-dependent RNase III Cleavage Ensures Rapid Turnover of the Stable Hok, SrnB and PndA Effector Messenger RNAs, **226**, 637–649.

RNA backbone
Analysis of the Role of Phosphate Oxygens in the Group I Intron from *Tetrahymena*, **228**, 743–758.

RNA bacteriophage ϕ29 assembly
Mutant Prohead RNAs in the *in Vitro* Packaging of Bacteriophage ϕ29 DNA–gp3, **223**, 991–998.

RNA chemical probing
Effect of Dimerization on the Conformation of the Encapsidation Psi Domain of Moloney Murine Leukemia Virus RNA, **223**, 205–220.

RNA conformation
Mutations Affecting RNA–DNA Hybrid Formation of t
ColE1 Replication Primer RNA. Restoration of RN
Sensitivity to a Copy-number Mutant by Second-s
Mutations, **226**, 997–1008.

RNA decay
Mechanism of Killer Gene Activation. Antisense RN
dependent RNase III Cleavage Ensures Rapid Tu
over of the Stable Hok, SrnB and PndA Effec
Messenger RNAs, **226**, 637–649.

RNA dimerization
Effect of Dimerization on the Conformation of the Enc
sidation Psi Domain of Moloney Murine Leuker
Virus RNA, **223**, 205–220.

RNA encapsidation domain
Effect of Dimerization on the Conformation of the Enc
sidation Psi Domain of Moloney Murine Leuker
Virus RNA, **223**, 205–220.

RNA footprinting
Preferential Interaction of Human Immunodeficie
Virus Reverse Transcriptase with Two Regions
Primer $tRNA^{Lys}$ as Evidenced by Footprinting Stud
and Inhibition with Synthetic Oligoribonucleoti
226, 1–6.

5 S RNA gene
Specific Interaction of the First Three Zinc Finger
TFIIIA with the Internal Control Region of the *X*
pus 5 S RNA Gene, **223**, 857–871.

RNA hairpin
Selection of High Affinity RNA Ligands to the Bacte
phage R17 Coat Protein, **228**, 862–869.

RNA ligand
Selection of High Affinity RNA Ligands to the Bacte
phage R17 Coat Protein, **228**, 862–869.

RNA messenger activation
Mechanism of Killer Gene Activation. Antisense R
dependent RNase III Cleavage Ensures Rapid T
over of the Stable Hok, SrnB and PndA Effe
Messenger RNAs, **226**, 637–649.

RNA modification interference
Analysis of the Role of Phosphate Oxygens in the Gro
Intron from *Tetrahymena*, **228**, 743–758.

RNA Moloney Murine Leukemia
Effect of Dimerization on the Conformation of the En
sidation Psi Domain of Moloney Murine Leuk
Virus RNA, **223**, 205–220.

RNA polymerase
Mechanism of Initiation of Transcription by *Bacillus*
tilis RNA Polymerase at Several Promoters,
399–414.
Parameters Affecting Transcription Termination
Escherichia coli RNA Polymerase. I. Analysis o
Rho-independent Terminators, **224**, 31–51.
Parameters Affecting Transcription Termination
Escherichia coli RNA. II. Construction and Analys
Hybrid Terminators, **224**, 53–63.
Model for the Mechanism of Bacteriophage T7 R
Transcription Initiation and Termination,
319–334.
DNA Topology-mediated Regulation of *Transcri*
Initiation from the Tandem Promoters of the
MEDA Operon of *Escherichia coli*, **224**, 919–935.
Structural Analysis of Ternary Complexes of *Escher*
coli RNA Polymerase. Individual Complexes H
along Different *Transcription* Units Have Distinct
Unexpected Biochemical Properties, **225**, 221–23
Structural Analysis of Ternary Complexes of *Escher*
coli RNA Polymerase. Deoxyribonuclease I Footp
ing of Defined Complexes, **225**, 239–250.
Central Domain of the Positive Control Protein NifA
Its Role in Transcriptional Activation, **225**, 271–

DNA Supercoiling Response of the σ^{54}-dependent *Klebsiella pneumoniae nifL* Promoter *in vitro*, **225**, 591–607.
Formation of Open and Elongating Transcription Complexes by RNA Polymerase III, **226**, 47–58.
Stimulation of the Phage λ pL Promoter by Integration Host Factor Requires the Carboxy Terminus of the α-Subunit of RNA Polymerase, **227**, 985–990.
Substitution of a Single Bacteriophage T3 Residue in Bacteriophage T7 RNA Polymerase at Position 748 Results in a Switch in Promoter Specificity, **228**, 506–515.
Structure of RNA and DNA Chains in Paused Transcription Complexes Containing *Escherichia coli* RNA Polymerase, **228**, 759–777.

polymerase I
Limited Proteolysis Unmasks Specific DNA-binding of the Murine RNA Polymerase I-specific Transcription Termination Factor TTFI, **227**, 635–647.

polymerase III
Kinetic Control of 5 S RNA Gene Transcription, **227**, 1009–1018.
A Factor with Sp1 DNA-binding Specificity Stimulates *Xenopus* U6 snRNA *in Vivo* Transcription by RNA Polymerase III, **228**, 387–394.
Topography of Transcription Factor Complexes on the *Saccharomyces cerevisiae* 5 S RNA Gene, **228**, 1063–1077.

polymerase sigma subunit
Characterization of Bacteriophage T7 RNA Polymerase by Linker Insertion Mutagenesis, **228**, 488–505.

processing
Functional Analysis of Internal Transcribed Spacer 2 of *Saccharomyces cerevisiae* Ribosomal DNA, **223**, 899–910.
Structural Requirements for Viroid Processing by RNase T1, **227**, 719–737.
Structural Requirements for the Processing of *Escherichia coli* 5 S Ribosomal RNA by RNase E *in Vitro*, **228**, 1078–1090.

protein binding
Selection of High Affinity RNA Ligands to the Bacteriophage R17 Coat Protein, **228**, 862–869.

protein interaction
Kinking of RNA Helices by Bulged Bases, and the Structure of the Human Immunodeficiency Virus Transactivator Response Element, **226**, 305–310.

pseudoknot
Mutational Analysis of the Pseudoknot in the tRNA-like Structure of Turnip Yellow Mosaic Virus RNA. Aminoacylation Efficiency and RNA Pseudoknot Stability, **223**, 221–232.
Mutational Analysis of the "Slippery-sequence" Component of a Coronavirus Ribosomal Frameshifting Signal, **227**, 463–479.

reverse transcription
Fidelity of Human Immunodeficiency Virus Type I Reverse Transcriptase in Copying Natural RNA, **223**, 595–600.

secondary structure
Sequence and Structure of the Catalytic RNA of Hepatitis Delta Virus Genomic RNA, **223**, 233–245.
Translation Inhibition by an mRNA Coding Region Secondary Structure is Determined by Its Proximity to the *AUG* Initiation Codon, **226**, 609–621.
Structural Requirements for Viroid Processing by RNase T1, **227**, 719–737.
Structure of RNA and DNA Chains in Paused Transcription Complexes Containing *Escherichia coli* RNA Polymerase, **228**, 759–777.

self-splicing
Circle Reopening in the *Tetrahymena* Ribozyme Resembles Site-specific Hydrolysis at the 3′ Splice Site, **223**, 351–360.
Co-optimization of Ribozyme Substrate Stacking and L-Arginine Binding, **225**, 945–949.

RNA splicing
Spectrum of Spontaneously Occurring Mutations in the *hprt* Gene of V79 Chinese Hamster Cells, **223**, 627–635.
Features of Spliceosome Evolution and Function Inferred from an Analysis of the Information at Human Splice Sites, **228**, 1124–1136.

RNA structure
Kinking of RNA Helices by Bulged Bases, and the Structure of the Human Immunodeficiency Virus Transactivator Response Element, **226**, 305–310.
Effect of Sequence Mutations on the Higher Order Structure of the Yeast 5 S rRNA, **226**, 1027–1035.
Analysis of the Role of Phosphate Oxygens in the Group I Intron from *Tetrahymena*, **228**, 743–758.
Structure Analysis of the 5′ External Transcribed Spacer of the Precursor Ribosomal RNA From *Saccharomyces cerevisiae*, **228**, 827–839.

RNA synthesis
Nucleosome Arrays Inhibit Both Initiation and Elongation of Transcripts by Bacteriophage T7 RNA Polymerase, **223**, 67–78.

RNA synthetase
Binding of the Yeast $tRNA^{Met}$ Anticodon by the Cognate Methionyl-tRNA Synthetase Involves at Least Two Independent Peptide Regions, **225**, 897–907.

RNA tertiary structure
Effect of Sequence Mutations on the Higher Order Structure of the Yeast 5 S rRNA, **226**, 1027–1035.

RNA virus
Structure of Tobraviral Particles: A Model Suggested from Sequence Conservation in Tobraviral and Tobamoviral Coat Proteins, **227**, 1–8.

RNA/DNA mixed substrates
Important 2′-hydroxyl Groups in Model Substrates for M1 RNA, the Catalytic RNA Subunit of RNase P from *Escherichia coli*, **226**, 399–409.

RNA-protein interaction
Direct Binding of Small Nuclear Ribonucleoprotein G to the Sm Site of Small Nuclear RNA. Ultraviolet Light Cross-linking of Protein G to the AAU Stretch Within the Sm Site (AAUUUGUGG) of U1 Small Nuclear Ribonucleoprotein Reconstituted *in Vitro*, **227**, 15–28.

Root development
Tubulin Gene Expression in Maize (*Zea mays* L.). Change in Isotype Expression along the Developmental Axis of Seedling Root, **227**, 97–107.

Root effect
Haemoglobin of the Antarctic Fish *Pagothenia bernacchii*. Amino Acid Sequence, Oxygen Equilibria and Crystal Structure of its Carbonmonoxy Derivative, **224**, 449–460.

rpoB
The *Escherichia coli rpoB60* Mutation Blocks Antitermination by Coliphage HK022 *Q*-function, **227**, 29–37.

Rubisco
Mutation of Asparagine 111 of Rubisco from *Rhodospirillum rubrum* Alters the Carboxylase/Oxygenase Specificity, **225**, 891–896.

Rubredoxin
Nucleotide Sequence and Organization of an H_2-uptake Gene Cluster from *Rhizobium leguminosarum* bv. viciae Containing a Rubredoxin-like Gene and Four Additional Open Reading Frames, **228**, 998–1002.

Rusticyanin
Crystallization and Preliminary X-ray Crystallographic Studies of Rusticyanin from *Thiobacillus ferrooxidans*, **227**, 581–582.

Saccharomyces cerevisiae
Base Alterations in Yeast Induced by Alkylating Agents with Differing Swain-Scott Substrate Constants, **223**, 617–626.

NAM7 Nuclear Gene Encodes a Novel Member of a Family of Helicases with a Zn-ligand Motif and is Involved in Mitochondrial Functions in *Saccharomyces cerevisiae*, **224**, 575–587.
Molecular Analysis of *Saccharomyces cerevisiae* Chromosome I. On the Number of Genes and the Identification of Essential Genes Using Temperature-sensitive-lethal Mutations, **225**, 53–65.
Transcriptional Commitment of Mitochondrial RNA Polymerase from *Saccharomyces cerevisiae*, **226**, 335–347.

Saccharomyces pombe
Chromatin Structure of *Schizosaccharomyces pombe*. A Nucleosome Repeat Length that is Shorter than the Chromatosomal DNA Length, **226**, 1009–1025.

Salmonella typhimurium
Morphological Pathway of Flagellar *ssembly* in *Salmonella typhimurium*, **226**, 433–446.
Purification, *Crystallization* and Preliminary Crystallographic Study of Neuraminidase from *Vibrio cholerae* and *Salmonella typhimurium* LT2, **226**, 1287–1290.
M Ring, S Ring and Proximal Rod of the Flagellar Basal Body of *Salmonella typhimurium* are Composed of Subunits of a Single Protein, FliF, **227**, 672–677.

Sarcoplasmic calcium-binding protein
Structure of a Sarcoplasmic Calcium-binding Protein from *Nereis diversicolor* Refined at 2·0 Å Resolution, **224**, 413–426.

Saturation transfer
Molecular Mechanism for Ligand Stabilization in the Mollusc Myoglobin Possessing the Distal Val Residue, **228**, 338–342.

Scanning transmission electron microscopy
Helical Structure of P Pili from *Escherichia coli*. Evidence from X-ray Fiber Diffraction and Scanning Transmission Electron Microscopy, **228**, 735–742.

Schistosoma mansoni
Crystallization and Preliminary X-ray Diffraction Studies of a Protective Cloned 28 kDa Glutathione S-transferase from *Schistosoma mansoni*, **224**, 515–518.

Sciatic
Order–Disorder Phenomena in Myelinated Nerve Sheaths. IV. The Disordering Effects of High Levels of Local Anaesthetics on Rat Sciatic and Optic Nerves, **226**, 535–548.

SecB
Biogenesis of Outer Membrane Protein PhoE of *Escherichia coli*. Evidence for Multiple SecB-binding Sites in the Mature Portion of the PhoE Protein, **224**, 369–379.

Secretory protein
Balbiani Ring 1 Gene in *Chironomus tentans*. Sequence Organization and Dynamics of a Coding Minisatellite, **225**, 349–361.

Selenocysteine
Bar to Normal UGA Translation by the Selenocysteine tRNA, **223**, 9–15.

SELEX
Selection of High Affinity RNA Ligands to the Bacteriophage R17 Coat Protein, **228**, 862–869.

Self-assembly
M Ring, S Ring and Proximal Rod of the Flagellar Basal Body of *Salmonella typhimurium* are Composed of Subunits of a Single Protein, FliF, **227**, 672–677.
Structure of Striated Microtubule-associated Fibers of Flagellar Roots. Comparison of Native and Reconstituted States, **227**, 698–710.
Role of B13 Glu in Insulin Assembly. The Hexamer Structure of Recombinant Mutant (B13 Glu→Gln) Insulin, **228**, 1163–1176.

Senescence
Telomere End-replication Problem and Cell Aging, **225**, 951–960.

Sensory perception
Crystal Structure of a Sweet Tasting Protein Thaumatin I, at 1·65 Å Resolution, **228**, 893–908.

Septation
Developmental Regulation of Transcription of the *Bacillus subtilis ftsAZ* Operon, **224**, 967–979.

Sequence motifs
Recognition of Distantly Related Protein Sequences Using Conserved Motifs and Neural Networks, **225**, 951–962.

Serine hydrolase
The Crystal Molecular Structure of the *Rhizomucor miehei* Triacylglyceride Lipase at 1·9 Å Resolution, **227**, 818–839.

Serpin
Crystal Structure of Cleaved Equine Leucocyte Elastase Inhibitor Determined at 1·95 Å Resolution, **223**, 1207–1218.
Secondary Structure Changes Stabilize the Reactive centre Cleaved Form of SERPINs. A Study by ^{1} Nuclear Magnetic Resonance and Fourier Transform Infrared Spectroscopies, **228**, 1235–1254.

Serratia marcescens
Crystallization of Recombinant Chitinase from the Cloned *chi*A Gene of *Serratia marcescens*, **226**, 897–898.
Crystallization of Recombinant Chitobiase from *Serratia marcescens*, **228**, 696–697.

Sheath protein
GTPase Activity of Bacteriophage T4 Sheath Protein, **223**, 23–25.

β-sheet
Stability of a Model β-Sheet in Water, **227**, 1244–1252.
Pyrrolidine Ring Puckering in *cis* and *trans*-proline Residues in Proteins and Polypeptides. Different Puckers are Favoured in Certain Situations, **227**, 725–734.

"Short-chain" dehydrogenase
Preliminary X-ray Crystallographic Studies on Alcohol Dehydrogenase from *Drosophila*, **227**, 356–358.

Shuttle vector
N-Methyl-*N*-nitrosourea-induced Mutations in Human Cells. Effects of the Transcriptional Activity of the Target Gene, **223**, 587–594.
Modulation of Ultraviolet Light Mutational Hotspots by Cellular Stress, **228**, 1031–1036.

Sialidase
Crystallization and Preliminary Crystallographic Study of Neuraminidase from *Micromonospora viridifaciens*, **225**, 1135–1136.
Purification, *Crystallization* and Preliminary Crystallographic Study of Neuraminidase from *Vibrio cholerae* and *Salmonella typhimurium* LT2, **226**, 1287–1290.

Sickle cell
Location of Potential Binding Sites on Deoxy Haemoglobin for the Design of Antigelling Agents, **227**, 791–800.

Signal transduction
Three-dimensional *Structure* for the β_2 Adrenergic Receptor Protein Based on Computer Modeling Studies, **227**, 859–871.

Simulation
Mathematical Characterization of Chaos Game Representation. New Algorithms for Nucleotide Sequence Analysis, **228**, 715–719.

Single-stranded binding protein
Characterization of DNA-binding and Strand-exchange Stimulation Properties of y-RPA, a Yeast Single-strand-DNA-binding Protein, **227**, 54–71.

Site directed mutagenesis
Sequence and Structure of the Catalytic RNA of Hepatitis Delta Virus Genomic RNA, **223**, 233–245.
Site-directed Mutagenesis Studies on the Binding of the Globular Domain of Linker Histone H5 to the Nucleosome, **223**, 651–659.
Antibody Framework Residues Affecting the Conformation of the Hypervariable Loops, **224**, 487–500.

Effect of the Asn-52→Ile Mutation on the Redox Potential of Yeast Cytochrome *c*. Theory and Experiment, **224**, 589–600.
Design and Structural Analysis of Alternative Hydrophobic Core Packing Arrangements in Bacteriophage T4 Lysozyme, **224**, 1143–1159.
The RNase T_1 Mutant Glu46Gln Binds the Inhibitors 2′GMP and 2′AMP at the 3′ Subsite, **225**, 533–542.
Mutation of Asparagine 111 of Rubisco from *Rhodospirillum rubrum* Alters the Carboxylase/Oxygenase Specificity, **225**, 891–896.
Binding of the Yeast $tRNA^{Met}$ Anticodon by the Cognate Methionyl-tRNA Synthetase Involves at Least Two Independent Peptide Regions, **225**, 897–907.
Asp537, Asp812 are Essential and Lys631, His811 are Catalytically Significant in Bacteriophage T7 RNA Polymerase Activity, **226**, 37–45.
High Resolution Functional Analysis of Antibody–Antigen Interactions, **226**, 851–865.
Site directed Mutagenesis of the GTP-binding Domain of β-Tubulin, **227**, 307–321.
Mutational Analysis of the Bacteriophage P1 Late Promoter Sequence P_s, **228**, 101–107.
Key Residues in the Allosteric Transition of *Bacillus stearothermophilus* Pyruvate Kinase Identified by Site-directed Mutagenesis, **228**, 265–276.
Structural Requirements for the Processing of *Escherichia coli* 5 S Ribosomal RNA by RNase E *in Vitro*, **228**, 1078–1090.
Role of B13 Glu in Insulin Assembly. The Hexamer Structure of Recombinant Mutant (B13 Glu→Gln) Insulin, **228**, 1163–1176.

pecific recombination
Functional Analysis of Box II Mutations in Yeast Site-specific Recombinases Flp and R. Significance of Amino Acid Conservation within the Int Family and the Yeast Sub-family, **228**, 1091–1103.

Unique Side-chain Conformation Encoding for Chirality and Azimuthal Orientation in the Molecular Packing of Skin Collagen, **228**, 963–969.

:r
Biochemical Characterization of the Major Structural Domain, **228**, 652–661.

:ry sequence
Mutational Analysis of the "Slippery-sequence" Component of a Coronavirus Ribosomal Frameshifting Signal, **227**, 463–479.

Characterization of a Conserved Carboxy-terminal Sequence in Secreted Proteins and a Motif Implicated in Extracellular Protein Interactions, **227**, 367–370.

cytoplasmic RNA
Ro Ribonucleoprotein Assembly *In Vitro*. Identification of RNA–Protein and Protein–Protein Interactions, **227**, 361–366.

nuclear RNA
Structural Organization of the Genes Encoding the Small Nuclear RNAs U1 to U6 of *Tetrahymena thermophila* is Very Similar to that of Plant Small Nuclear RNA Genes, **227**, 114–121.
A Factor with Sp1 DNA-binding Specificity Stimulates *Xenopus* U6 snRNA *in Vivo* Transcription by RNA Polymerase III, **228**, 387–394.

venom toxins
Crystal Structure of α-Dendrotoxin from the Green Mamba Venom and its Comparison with the Structure of Bovine Pancreatic Trypsin Inhibitor, **224**, 671–683.

Inhibitory Effects of N-and C-terminal Truncated *Escherichia coli recA* Gene Products on Functions of the Wild-type *recA* Gene, **223**, 105–114.
C-terminal Truncated *Escherichia coli* RecA Protein RecA5327 Has Enhanced Binding Affinities to Single- and Double-stranded DNAs, **223**, 115–129.
Genetical and Biochemical Evidence for the Involvement of the Coprotease Domain of *Escherichia coli* RecA Protein in Recombination, **223**, 823–829.
Isolation and Characterization of LexA Mutant Repressors with Enhanced DNA Binding Affinity, **225**, 609–620.

Spider monkey
Fetal Recruitment of Anthropoid γ-Globin Genes. Findings from Phylogenetic Analyses Involving the 5′-Flanking Sequences of the $\psi\gamma'$ Globin Gene of Spider monkey *Ateles geoffroyi*, **224**, 875–881.

Splicing
Direct Binding of Small Nuclear Ribonucleoprotein G to the Sm Site of Small Nuclear RNA. Ultraviolet Light Cross-linking of Protein G to the AAU Stretch Within the Sm Site (AAUUUGUGG) of U1 Small Nuclear Ribonucleoprotein Reconstituted *in Vitro*, **227**, 15–28.
Acyl-CoA-binding Protein/Diazepam-binding Inhibitor Gene and Pseudogenes. A Typical Housekeeping Gene Family, **228**, 1011–1022.
Features of Spliceosome Evolution and Function Inferred from an Analysis of the Information at Human Splice Sites, **228**, 1124–1136.

***Trans*-splicing**
The P-glycoprotein Gene Family of *Caenorhabditis elegans*. Cloning and Characterization of Genomic and Complementary DNA Sequences, **228**, 701–711.

Sporulation
Developmental Regulation of Transcription of the *Bacillus subtilis ftsAZ* Operon, **224**, 967–979.
Sporulation Regulatory Protein GerE from *Bacillus subtilis* Binds to and Can Activate or Repress Transcription from Promoters for Mother-cell-specific Genes, **226**, 1037–1050.
Fate of the SpoIIID Switch Protein during *Bacillus subtilis* Sporulation Depends on the Mother-cell Sigma Factor, σ^K, **228**, 840–849.

S-protein
Biochemical Characterization of the Major Structural Domain, **228**, 652–661.

Staphylococcal nuclease
A Peptide Model for Proline Isomerism in the Unfolded State of Staphylococcal Nuclease, **228**, 343–346.

Strand exchange
Early Stages in RecA Protein-catalyzed Pairing. Analysis of Coaggregate Formation and Non-homologous DNA Contacts, **228**, 409–420.

Streptococcus
Molecular Cloning and Analysis of the Gene Encoding the NADH Oxidase from *Streptococcus faecalis* 10C1. Comparison with NADH Peroxidase and the Flavoprotein Disulfide Reductases, **227**, 658–671.
Crystallization and Preliminary X-ray Analysis of the Complex between a Mouse Fab Fragment and a Single IgG-Binding Domain from Streptococcal Protein G, **227**, 1253–1254.

Streptomycin resistance
Kinetic Properties of *Escherichia coli* Ribosomes with Altered Forms of S12, **224**, 1011–1027.

Stringent control
Inheritance of the Replication Complex by One of Two Daughter Copies During λ Plasmid Replication in *Escherichia coli*, **226**, 681–688.

Structure function relationships
Correlation of Co-ordinated Amino Acid Changes at the Two-domain Interface of Cysteine Proteases with Protein Stability, **224**, 501–509.
Three-dimensional *Structure* for the β_2 Adrenergic Receptor Protein Based on Computer Modeling Studies, **225**, 859–871.

Substrate binding
Structure of the Complex Between Adenylate Kinase from *Escherichia coli* and the Inhibitor Ap_5A Refined at 1·9 Å Resolution. A Model for a Catalytic Transition State., **224**, 159–177.

Effect of Additives on the Crystallization of Glutamate Dehydrogenase from *Clostridium symbiosum*. Evidence for a Ligand-induced Conformational Change, **224**, 1181–1184.

Crystal Structures of Phosphate, Iodide and Iodate-inhibited Phospholipase C from *Bacillus cereus* and Structural Investigations of the Binding of Reaction Products and a Substrate Analogue, **225**, 543–549.

Several Regions of a tRNA Precursor Determine the *Escherichia coli* RNase P Cleavage Site, **227**, 1019–1031.

X-ray Analysis of Substrate Analogs in the Ricin A-chain Active Site, **227**, 1136–1145.

X-ray Structure Determination and Comparison of Two Crystal Forms of a Variant (Asn115Arg) of the Alkaline Protease from *Bacillus alcalophilus* Refined at 1·85 Å Resolution, **228**, 108–117.

Subtilisin

Crystal Structure of the Alkaline Proteinase Savinase™ from *Bacillus lentus* at 1·4 Å Resolution, **223**, 427–445.

Functional Analysis of the Intramolecular Chaperone. Mutational Hot Spots in the Subtilisin Pro-peptide and a Second-site Suppressor Mutation within the Subtilisin Molecule, **226**, 931–933.

X-ray Structure Determination and Comparison of Two Crystal Forms of a Variant (Asn115Arg) of the Alkaline Protease from *Bacillus alcalophilus* Refined at 1·85 Å Resolution, **228**, 108–117.

The Crystal Structure of the *Bacillus lentus* Alkaline Protease, Subtilisin BL, at 1·4 Å Resolution, **228**, 580–595.

ε subunit

The Expression, Purification and Crystallization of the ε Subunit of the F_1 Portion of the ATPase of *Escherichia coli*, **228**, 306–309.

Sugar–protein interactions

Two Crystal Forms of the Lentil Lectin Diffract to High Resolution, **223**, 579–581.

Suicide DNA

Mode of Action of Topoisomerase II-targeting Agents at a Specific DNA Sequence. Uncoupling the DNA Binding, Cleavage and Religation Events, **228**, 778–786.

Camptothecin Inhibits Both the Cleavage and Religation Reactions of Eukaryotic DNA Topoisomerase I, **228**, 1025–1030.

Sulfate reception protein

Interdomain Salt Bridges Modulate Ligand-induced Domain Motion of the Sulfate Receptor Protein for Active Transport, **223**, 27–30.

Superoxide dismutase

Crystal Structure of Yeast Cu,Zn Superoxide Dismutase. *Crystallographic* Refinement at 2·5 Å Resolution, **225**, 791–809.

Crystal Structure Solution and Refinement of the Semisynthetic Cobalt-substituted Bovine Erythrocyte Superoxide Dismutase at 2·0 Å Resolution, **226**, 227–238.

Suppressor

NAM7 Nuclear Gene Encodes a Novel Member of a Family of Helicases with a Zn-ligand Motif and is Involved in Mitochondrial Functions in *Saccharomyces cerevisiae*, **224**, 575–587.

Genetic Analysis of Mutations Affecting Terminase, the Bacteriophage λ DNA Packaging Enzyme, that Suppress Mutations in *cosB*, the Terminase Binding Site, **228**, 72–87.

Seven, Eight and Nine-membered Anticodon Loop Mutants of $tRNA_2^{Arg}$ which Cause +1 Frameshifting. Tolerance of DHU Arm and Other Secondary Mutations, **228**, 1042–1054.

Sweet protein

Crystal Structure of a Sweet Tasting Protein Thaumatin I, at 1·65 Å Resolution, **228**, 893–908.

Sweet taste

Crystal Structure of a Sweet Tasting Protein Thaumatin I, at 1·65 Å Resolution, **228**, 893–908.

Switchable protein

Conformational Switching in the Flagellar Filament of *Salmonella typhimurium*, **226**, 447–454.

Synchrotron radiation

Crystallization of Sindbis Virus and its Nucleocapsid, 22 277–280.

High Resolution Crystal Structures and Comparisons of State Deoxyhaemoglobin and Two Liganded T-Sta Haemoglobins T(α-oxy)Haemoglobin and T(met)Ha moglobin, **228**, 551–579.

Synthetic libraries

Bypassing Immunisation. Human Antibodies from Sy thetic Repertoires of Germ Line V_H-Gene Segmen Rearranged *in vitro*, **227**, 381–388.

T cell receptor

Secretion of T Cell Receptor Fragments From Recom nant *Escherichia coli* Cells, **224**, 885–890.

Tail assembly

Inhibition of Bacteriophage λ Development by the *kl* Gene of Broad-Host-Range Plasmid RK2, 22 1054–1067.

Taxol

Low Resolution Structure of Microtubules in Solutio Synchrotron X-ray Scattering and Electron Mic scopy of Taxol-induced Microtubules Assembled fr Purified Tubulin in Comparison with Glycerol a MAP-induced Microtubules, **226**, 169–184.

Temperature-gradient gel electrophoresis

Structural Requirements for Viroid Processing by RN T1, **227**, 719–737.

Temperature-sensitive mutations

Molecular Analysis of *Saccharomyces cerevisiae* Chro some I. On the Number of Genes and the Identificati of Essential Genes Using Temperature-sensitive-let Mutations, **225**, 53–65.

A Mutation in the Specificity Polypeptide of the Typ Restriction Endonuclease R · *Eco*K That Affects Su unit Assembly, **227**, 597–601.

Tendamistat

Thermodynamics of Unfolding of the α-Amylase Inhibi Tendamistat. Correlations Between Accessible Surfa Area and Heat Capacity, **223**, 769–779.

Tensin

Occurrence of an Actin-inserting Domain in Tensin, 2 593–594.

Terminase

Bacteriophage P1 Genes Involved in the Recognition a Cleavage of the Phage Packaging Site (*pac*), 2 977–989.

Molecular Analysis of the *Bacillus subtilis* Bacteriopha SPP1 Region Encompassing Genes *1* to *6*. The P ducts of Gene *1* and Gene *2* are Required for Cleavage, **224**, 87–102.

Genetic Analysis of *cosB*, the Binding Site for Termina the DNA Packaging Enzyme of Bacteriophage λ, 2 58–71.

Genetic Analysis of Mutations Affecting Terminase, Bacteriophage λ DNA Packaging Enzyme, that Su press Mutations in *cosB*, the Terminase Binding Si **228**, 72–87.

Tetrahydrobiopterin biosynthesis

Crystallization and Preliminary Crystallograp Characterization of GTP Cyclohydrolase I fr *Escherichia coli*, **226**, 1279–1281.

Tetrahymena

Circle Reopening in the *Tetrahymena* Ribozyme Rese bles Site-specific Hydrolysis at the 3′ Splice Site, 2 351–360.

Co-optimization of Ribozyme Substrate Stacking and Arginine Binding, **225**, 945–949.

Structural Organization of the Genes Encoding the Sm Nuclear RNAs U1 to U6 of *Tetrahymena thermophila*

Very Similar to that of Plant Small Nuclear RNA Genes, **227**, 114–121.
Tetrahymena Gene Encodes a Protein that is Homologous with the Liver-specific F-antigen and Associated with Membranes of the Golgi Apparatus and Transport Vesicles, **228**, 850–861.

loop
Ribosomal RNA Identity Elements for Ricin A-chain Recognition and Catalysis. Analysis with Tetraloop Mutants, **226**, 411–424.

matin
Crystal Structure of a Sweet Tasting Protein Thaumatin I, at 1·65 Å Resolution, **228**, 893–908.

nodynamics
Thermodynamics of Unfolding of the α-Amylase Inhibitor Tendamistat. Correlations Between Accessible Surface Area and Heat Capacity, **223**, 769–779.
Thermodynamics of DNA Branching, **223**, 781–789.
Thermodynamic Characterization of Cytochrome *c* at Low pH. Observation of the Molten Globule State and of the Cold Denaturation Process, **223**, 1139–1153.
Binding of Hirudin to Human α, β and γ-Thrombin. A Comparative Kinetic and Thermodynamic Study, **225**, 177–184.
Binding of an Antiviral Agent to a Sensitive and a Resistant Human Rhinovirus. Computer Simulation Studies with Sampling of Amino Acid Side-chain Conformations. II. Calculation of Free-energy Differences by Thermodynamic Integration, **225**, 697–712.
Thermodynamic Consequences of the Removal of a Disulphide Bridge from Hen Lysozyme, **225**, 939–943.
Protein Interactions with Urea and Guanidinium Chloride. A Calorimetric Study, **226**, 491–505.
Conformational and Thermodynamic Properties of Supercoiled DNA, **227**, 1224–1243.
Stability of a Model β-Sheet in Water, **227**, 1244–1252.

rus thermophilus
Crystallization of the Seryl-tRNA Synthetase–$tRNA^{Ser}$ Complex from *Thermus thermophilus*, **224**, 519–522.

hydrolase
Crystal Structure Analysis, Refinement and Enzymatic Reaction Mechanism of *N*-Carbamoylsarcosine Amidohydrolase from *Arthrobacter sp.* at 2·0 Å Resolution, **226**, 1111–1130.

ins
Extreme Divergence of a Novel Wheat Thionin Generated by a Mutational Burst Specifically Affecting the Mature Protein Domain of the Precursor, **224**, 1003–1009.

edoxin
Structure of Oxidized Bacteriophage T4 Glutaredoxin (Thioredoxin). Refinement of Native and Mutant Proteins, **228**, 596–618.

nine
Energy-optimized *Structure* of Antifreeze Protein and Its Binding Mechanism, **223**, 509–517.

nbin
Binding of Hirudin to Human α, β and γ-Thrombin. A Comparative Kinetic and Thermodynamic Study, **225**, 177–184.
Modulation of Thrombin–Hirudin Interaction by Specific Ion Effects, **226**, 263–269.
Refined 2·3 Å X-ray Crystal Structure of Bovine Thrombin Complexes Formed with the Benzamidine and Arginine-based Thrombin Inhibitors NAPAP, 4-TAPAP and MQPA. A Starting Point for Improving Antithrombotics, **226**, 1085–1099.
Impact of Protein–Protein Contacts on the Conformation of Thrombin-bound Hirudin Studied by Comparison with the Nuclear Magnetic Resonance Solution Structure of Hirudin(1-51), **228**, 1206–1211.

barrel
Topology Fingerprint Approach to the Inverse Protein Folding Problem, **227**, 227–238.
Discrimination of the $(\beta/\alpha)_8$-Barrel Fold, **228**, 170–187.

Tissue-type plasminogen activator
Solution Structure of the Fibrin Binding Finger Domain of Tissue-type Plasminogen Activator Determined by ^1H Nuclear Magnetic Resonance, **225**, 821–833.

Tobacco mosaic virus
Direct Visualization of the Structure of the "20 S" Aggregate of Coat Protein of Tobacco Mosaic Virus. The "Disk" is the Major Structure at pH 7·0 and the *Proto*-helix at lower pH, **224**, 381–394.
Quantitation of Molecular Densities by Cryo-electron Microscopy. Determination of the Radial Density Distribution of Tobacco Mosaic Virus, **226**, 763–774.
Structure of Tobraviral Particles: A Model Suggested from Sequence Conservation in Tobraviral and Tobamoviral Coat Proteins, **227**, 1–8.
Structure of the U2 Strain of Tobacco Mosaic Virus Refined at 3·5 Å Resolution Using X-ray Fiber Diffraction, **228**, 516–528.

Tobacco rattle virus
Structure of Tobraviral Particles: A Model Suggested from Sequence Conservation in Tobraviral and Tobamoviral Coat Proteins, **227**, 1–8.

Topoisomerase
Two Independent Amsacrine-resistant Human Myeloid Leukemia Cell Lines Share an Identical Point Mutation in the 170 kDa Form of Human Topoisomerase II, **223**, 837–843.
African Swine Fever Virus Encodes a Gene with Extensive Homology to Type II DNA Topoisomerases, **228**, 1003–1010.
Camptothecin Inhibits Both the Cleavage and Religation Reactions of Eukaryotic DNA Topoisomerase I, **228**, 1025–1030.

Topoisomerase II
Mode of Action of Topoisomerase II-targeting Agents at a Specific DNA Sequence. Uncoupling the DNA Binding, Cleavage and Religation Events, **228**, 778–786.

Topology of tRNA–ribosome interaction
Two tRNA-binding Sites in Addition to A and P Sites on Eukaryotic Ribosomes, **228**, 450–459.

Toxic shock syndrome toxin-1
Purification, Crystallization and Preliminary X-ray Analysis of Toxic Shock Syndrome Toxin-1 from *Staphylococcus aureus*, **228**, 983–986.

Toxin
Refined Structure of the Pore-forming Domain of Colicin A at 2·4 Å Resolution, **224**, 639–657.
Structure of Scorpion Toxin Variant-3 at 1·2 Å Resolution, **227**, 239–252.
Purification, Crystallization and Preliminary X-ray Analysis of Toxic Shock Syndrome Toxin-1 from *Staphylococcus aureus*, **228**, 983–986.

Tramtrack
Sequence-specific DNA Binding by a Two Zinc-finger Peptide from the *Drosophila melanogaster* Tramtrack Protein, **226**, 349–366.

Transcription
Direct Evidence for the Effect of *Transcription* on Local DNA Supercoiling *in Vivo*, **223**, 131–144.
Mechanism of Initiation of Transcription by *Bacillus subtilis* RNA Polymerase at Several Promoters, **223**, 399–414.
N-Methyl-*N*-nitrosourea-induced Mutations in Human Cells. Effects of the Transcriptional Activity of the Target Gene, **223**, 587–594.
Proximal Sequence Element Factor Binding and Species Specificity in Vertebrate U6 snRNA Promoters, **223**, 873–884.
Regulation of Open Complex Formation at the *Escherichia coli* Galactose Operon Promoters. Simultaneous Interaction of RNA Polymerase, *gal* Repressor and CAP/cAMP, **224**, 15–29.

Parameters Affecting Transcription Termination by *Escherichia coli* RNA Polymerase. I. Analysis of 13 Rho-independent Terminators, **224**, 31–51.
Parameters Affecting Transcription Termination by *Escherichia coli* RNA. II. Construction and Analysis of Hybrid Terminators, **224**, 53–63.
Upstream Curved Sequences Influence the Initiation of *Transcription* at the *Escherichia coli* Galactose Operon, **224**, 293–306.
Isolation and Characterization of Mutant Bacteriophage T7 RNA Polymerases, **224**, 307–318.
Model for the Mechanism of Bacteriophage T7 RNAP *Transcription* Initiation and Termination, **224**, 319–334.
Strand-specific LINE-1 *Transcription* in Mouse F9 Cells Originates from the Youngest Phylogenetic Subgroup of LINE-1 Elements, **224**, 559–574.
Developmental Regulation of Transcription of the *Bacillus subtilis ftsAZ* Operon, **224**, 967–979.
Structural Analysis of Ternary Complexes of *Escherichia coli* RNA Polymerase. Individual Complexes Halted along Different *Transcription* Units Have Distinct and Unexpected Biochemical Properties, **225**, 221–237.
Structural Analysis of Ternary Complexes of *Escherichia coli* RNA Polymerase. Deoxyribonuclease I Footprinting of Defined Complexes, **225**, 239–250.
Isolation and Characterization of LexA Mutant Repressors with Enhanced DNA Binding Affinity, **225**, 609–620.
Asp537, Asp812 are Essential and Lys631, His811 are Catalytically Significant in Bacteriophage T7 RNA Polymerase Activity, **226**, 37–45.
Formation of Open and Elongating Transcription Complexes by RNA Polymerase III, **226**, 47–58.
σ-Aminolevulinate Couples *cycA* Transcription To Changes in Heme Availability in *Rhodobacter sphaeroides*, **226**, 101–115.
Transcriptional Commitment of Mitochondrial RNA Polymerase from *Saccharomyces cerevisiae*, **226**, 335–347.
Positive Regulation of the Expression of the *Escherichia coli pts* Operon. Identification of the Regulatory Regions, **226**, 623–635.
Mutations Affecting RNA–DNA Hybrid Formation of the ColE1 Replication Primer RNA. Restoration of RNA I Sensitivity to a Copy-number Mutant by Second-site Mutations, **226**, 997–1008.
Primary Structure of the Second Largest Subunit of Human RNA Polymerase II (or B), **226**, 1295–1299.
cAMP–CRP Activator Complex and the CytR Repressor Protein Bind Co-operatively to the *cytRP* Promoter in *Escherichia coli* and CytR Antagonizes the cAMP–CRP-induced DNA bend, **227**, 396–406.
Limited Proteolysis Unmasks Specific DNA-binding of the Murine RNA Polymerase I-specific Transcription Termination Factor TTFI, **227**, 635–647.
Kinetic Control of 5 S RNA Gene Transcription, **227**, 1009–1018.
Role of MotA Transcription Factor in Bacteriophage T4 DNA Replication, **228**, 88–100.
Mutational Analysis of the Bacteriophage P1 Late Promoter Sequence P_s, **228**, 101–107.
Tetrahymena Gene Encodes a Protein that is Homologous with the Liver-specific F-antigen and Associated with Membranes of the Golgi Apparatus and Transport Vesicles, **228**, 850–861.

Transcription activator

Supercoiling, Integration Host Factor, and a Dual Promoter System, Participate in the Control of the Bacteriophage α pL Promoter, **224**, 937–948.
Central Domain of the Positive Control Protein NifA and Its Role in Transcriptional Activation, **225**, 271–286.

Transcription activator proteins

Solution Structures of Two Zinc-finger Domains from SWI5 Obtained Using Two-dimensional ^1H Nuclear Magnetic Resonance Spectroscopy. A Zinc-finger Structure with a Third Strand of β-Sheet, **228**, 637–651.

Transcription alkylating agents

N-Methyl-*N*-nitrosourea-induced Mutations in Huma Cells. Effects of the Transcriptional Activity of Target Gene, **223**, 587–594.

Transcription antitermination

Direct Interaction Between Two *Escherichia coli Tr scription* Antitermination Factors, NusB and Ri somal Protein S10, **223**, 55–66.
The *Escherichia coli rpoB60* Mutation Blocks Antitermi tion by Coliphage HK022 *Q*-function, **227**, 29–37.

Transcription attenuation

Synthesis and Degradation of the mRNA of the Tn*21* Operon, **225**, 251–259.

Transcription bidirectional promoter

Binding of Proteins from Embryonic and Differentia Cells to a Bidirectional Promoter Contained withi CpG Island, **226**, 289–299.

Transcription complex

Structure of RNA and DNA Chains in Paused Transc tion Complexes Containing *Escherichia coli* RNA P merase, **228**, 759–777.

Transcription elongation

Solution Studies of Elongation Factor Tu from t Extreme Halophile *Halobacterium marismortui*, 361–371.
Refined Structure of Elongation Factor EF-Tu fro *Escherichia coli*, **223**, 721–742.
Parameters Affecting Transcription Termination *Escherichia coli* RNA Polymerase. I. Analysis o Rho-independent Terminators, **224**, 31–51.
Parameters Affecting Transcription Termination *Escherichia coli* RNA. II. Construction and Analys Hybrid Terminators, **224**, 53–63.
Structural Analysis of Ternary Complexes of *Escheri coli* RNA Polymerase. Individual Complexes Ha along Different *Transcription* Units Have Distinct Unexpected Biochemical Properties, **225**, 221–237
Structural Analysis of Ternary Complexes of *Escheri coli* RNA Polymerase. Deoxyribonuclease I Footp ing of Defined Complexes, **225**, 239–250.
Control of Adenovirus Major Late Gene Expressio Multiple Levels, **225**, 287–298.

Transcription factor

Proximal Sequence Element Factor Binding and Spe Specificity in Vertebrate U6 snRNA Promoters, 873–884.
Transcription Factor eUSF is an Essential Componen Isolated Transcription Complexes on the Duck His H5 Gene and it Mediates the Interaction of TF with a TATA-Deficient Promoter, **223**, 885–898.
Formation of Open and Elongating Transcription C plexes by RNA Polymerase III, **226**, 47–58.
Binding of Proteins from Embryonic and Differenti Cells to a Bidirectional Promoter Contained with CpG Island, **226**, 289–299.
Adenovirus VARNA1 Gene B Block Promoter Elem Sequences Required for Transcription and for I action with Transcription Factors, **227**, 1068–108
Fate of the SpoIIID Switch Protein during *Bacillus s lis* Sporulation Depends on the Mother-cell Sigma tor, σ^K, **228**, 840–849.
Topography of Transcription Factor Complexes on *Saccharomyces cerevisiae* 5 S RNA Gene, 22 1063–1077.

Transcription factor CT-binding protein/GAGA

Promoter Sequence Containing $(CT)_n \cdot (GA)_n$ Repea Critical for the Formation of the DNase I Hypers ive Sites in the *Drosophila hsp26* Gene, **225**, 985–9

Transcription factor IID

Transcription Factor eUSF is an Essential Componen Isolated Transcription Complexes on the Duck His H5 Gene and it Mediates the Interaction of TF with a TATA-Deficient Promoter, **223**, 885–898.

scription factor IIIA
Specific Interaction of the First Three Zinc Fingers of TFIIIA with the Internal Control Region of the *Xenopus* 5 S RNA Gene, **223**, 857–871.
Mutant Conformation of p53. Precise Epitope Mapping Using a Filamentous Phage Epitope Library, **225**, 577–583.
Structure of the TFIIIA–5 S DNA Complex, **227**, 407–417.

scription factor *Mot*A
Role of MotA Transcription Factor in Bacteriophage T4 DNA Replication, **228**, 88–100.

scription factor Sp1
A Factor with Sp1 DNA-binding Specificity Stimulates *Xenopus* U6 snRNA *in Vivo* Transcription by RNA Polymerase III, **228**, 387–394.

scription factor TFIIIA
Structure of the TFIIIA–5 S DNA Complex, **227**, 407–417.

scription fidelity
Fidelity of Human Immunodeficiency Virus Type I Reverse Transcriptase in Copying Natural RNA, **223**, 595–600.

scription *in vitro*
Adenovirus VARNA1 Gene B Block Promoter Element Sequences Required for Transcription and for Interaction with Transcription Factors, **227**, 1068–1085.

scription initiation
Upstream Curved Sequences Influence the Initiation of *Transcription* at the *Escherichia coli* Galactose Operon, **224**, 293–306.
Stimulation of the Phage λ pL Promoter by Integration Host Factor Requires the Carboxy Terminus of the α-Subunit of RNA Polymerase, **227**, 985–990.
Characterization of Bacteriophage T7 RNA Polymerase by Linker Insertion Mutagenesis, **228**, 488–505.

scription kinetic control
Kinetic Control of 5 S RNA Gene Transcription, **227**, 1009–1018.

scription *nus* mutations
The *Escherichia coli rpoB60* Mutation Blocks Antitermination by Coliphage HK022 *Q*-function, **227**, 29–37.

scription NusB
Direct Interaction Between Two *Escherichia coli Transcription* Antitermination Factors, NusB and Ribosomal Protein S10, **223**, 55–66.

scription open complexes
DNA Supercoiling Response of the σ^{54}-dependent *Klebsiella pneumoniae nifL* Promoter *in vitro*, **225**, 591–607.
Formation of Open and Elongating Transcription Complexes by RNA Polymerase III, **226**, 47–58.

scription pausing
Structure of RNA and DNA Chains in Paused Transcription Complexes Containing *Escherichia coli* RNA Polymerase, **228**, 759–777.

scription polarity
Synthesis and Degradation of the mRNA of the Tn*21 mer* Operon, **225**, 251–259.
Interdependence of *Translation*, *Transcription* and mRNA Degradation in the *lacZ* Gene, **226**, 581–596.

scription repression
kfrA Gene of Broad Host Range Plasmid RK2 Encodes a Novel DNA-binding Protein, **225**, 651–660.

scription sigma factor
Developmental Regulation of Transcription of the *Bacillus subtilis ftsAZ* Operon, **224**, 967–979.
Sporulation Regulatory Protein GerE from *Bacillus subtilis* Binds to and Can Activate or Repress Transcription from Promoters for Mother-cell-specific Genes, **226**, 1037–1050.

scription termination
Parameters Affecting Transcription Termination by *Escherichia coli* RNA Polymerase. I. Analysis of 13 Rho-independent Terminators, **224**, 31–51.
Parameters Affecting Transcription Termination by *Escherichia coli* RNA. II. Construction and Analysis of Hybrid Terminators, **224**, 53–63.
Model for the Mechanism of Bacteriophage T7 RNAP *Transcription* Initiation and Termination, **224**, 319–334.
Limited Proteolysis Unmasks Specific DNA-binding of the Murine RNA Polymerase I-specific Transcription Termination Factor TTF1, **227**, 635–647.

Transcription upstream activating sequence
DNA Topology-mediated Regulation of *Transcription* Initiation from the Tandem Promoters of the *ilvG-MEDA* Operon of *Escherichia coli*, **224**, 919–935.
Mutagenesis of the *Bacillus subtilis* "-12, -24" Promoter of the Levanase Operon and Evidence for the Existence of an Upstream Activating Sequence, **226**, 85–99.

Transduction
Molecular Genetic Analysis of Bacteriophage P22 Gene *3* Product, a Protein Involved in the Initiation of Headful DNA Packaging, **227**, 1086–1099.

Transfer RNA
Bar to Normal UGA Translation by the Selenocysteine tRNA, **223**, 9–15.
Role of Residue Glu152 in the Discrimination between Transfer RNAs by Tyrosyl-tRNA Synthetase from *Bacillus stearothermophilus*, **223**, 801–810.
Nucleotides of tRNA Governing the Specificity of *Escherichia coli* Methionyl-$tRNA_f^{Met}$ Formyltransferase, **224**, 359–367.
Crystallization of the Seryl-tRNA Synthetase–$tRNA^{Ser}$ Complex from *Thermus thermophilus*, **224**, 519–522.
Binding of the Yeast $tRNA^{Met}$ Anticodon by the Cognate Methionyl-tRNA Synthetase Involves at Least Two Independent Peptide Regions, **225**, 897–907.
Effect of Conformational Features on the Aminoacylation of tRNAs and Consequences on the Permutation of tRNA Specificities, **226**, 323–333.
Mutational Analysis of the "Slippery-sequence" Component of a Coronavirus Ribosomal Frameshifting Signal, **227**, 463–479.
Seven, Eight and Nine-membered Anticodon Loop Mutants of $tRNA_2^{Arg}$ which Cause +1 Frameshifting. Tolerance of DHU Arm and Other Secondary Mutations, **228**, 1042–1054.

Transfer RNA acceptor stem
Nucleotides of tRNA Governing the Specificity of *Escherichia coli* Methionyl-$tRNA_f^{Met}$ Formyltransferase, **224**, 359–367.

Transfer RNA anticodon binding
Binding of the Yeast $tRNA^{Met}$ Anticodon by the Cognate Methionyl-tRNA Synthetase Involves at Least Two Independent Peptide Regions, **225**, 897–907.

Transfer RNA conformation
Effect of Conformational Features on the Aminoacylation of tRNAs and Consequences on the Permutation of tRNA Specificities, **226**, 323–333.

Transfer RNA gene
Small Single-copy Region of Plastid DNA in the Non-photosynthetic Angiosperm *Epifagus virginiana* Contains Only Two Genes. Differences Among Dicots, Monocots and Bryophytes in Gene Organization at a Non-bioenergetic Locus, **223**, 95–104.

Transfer RNA identity
Role of Residue Glu152 in the Discrimination between Transfer RNAs by Tyrosyl-tRNA Synthetase from *Bacillus stearothermophilus*, **223**, 801–810.
Synthetase Competition and tRNA Context Determine the *in Vivo* Identity of tRNA Discriminator Mutants, **228**, 1055–1062.

Transfer RNA Methionyl-$tRNA_f^{Met}$ formyltransferase
Nucleotides of tRNA Governing the Specificity of *Escherichia coli* Methionyl-$tRNA_f^{Met}$ Formyltransferase, **224**, 359–367.

Transfer RNA modification
Importance of mRNA Folding and Start Codon Accessibility in the Expression of Genes in a Ribosomal Protein Operon of *Escherichia coli*, **224**, 949–966.

Transfer RNA mutants
Several Regions of a tRNA Precursor Determine the *Escherichia coli* RNase P Cleavage Site, **227**, 1019–1031.

Transfer RNA processing
Several Regions of a tRNA Precursor Determine the *Escherichia coli* RNase P Cleavage Site, **227**, 1019–1031.

Transfer RNA related structures
Mutational Analysis of the Pseudoknot in the tRNA-like Structure of Turnip Yellow Mosaic Virus RNA. Aminoacylation Efficiency and RNA Pseudoknot Stability, **223**, 221–232.
Domains of the *Escherichia coli* Threonyl-tRNA Synthetase Translational Operator and their Relation to Threonine tRNA Isoacceptors, **227**, 621–634.

Transfer RNA specificity switch
Effect of Conformational Features on the Aminoacylation of tRNAs and Consequences on the Permutation of tRNA Specificities, **226**, 323–333.

Transfer RNA structure
Fluorine-19 Nuclear Magnetic Resonance as a Probe of the Solution Structure of Mutants of 5-Fluorouracil-substituted *Escherichia coli* Valine tRNA, **227**, 1164–1172.
Correlations Between Fluorine-19 Nuclear Magnetic Resonance Chemical Shift and the Secondary and Tertiary Structure of 5-Fluorouracil-substituted tRNA, **227**, 1173–1181.

Transfer RNA synthetase
Role of Residue Glu152 in the Discrimination between Transfer RNAs by Tyrosyl-tRNA Synthetase from *Bacillus stearothermophilus*, **223**, 801–810.
Crystallization of the Seryl-tRNA Synthetase–$tRNA^{Ser}$ Complex from *Thermus thermophilus*, **224**, 519–522.
Crystallization of Aspartyl-tRNA Synthetase-$tRNA^{Asp}$ Complex from *Escherichia coli* and First Crystallographic Results, **224**, 1171–1173.
Pre-nucleation *Crystallization* Studies on Aminoacyl-tRNA Synthetases by Dynamic Light-scattering, **225**, 185–191.

Transfer RNA tertiary structure
Correlations Between Fluorine-19 Nuclear Magnetic Resonance Chemical Shift and the Secondary and Tertiary Structure of 5-Fluorouracil-substituted tRNA, **227**, 1173–1181.

Transfer tRNA Primer
Preferential Interaction of Human Immunodeficiency Virus Reverse Transcriptase with Two Regions of Primer $tRNA^{Lys}$ as Evidenced by Footprinting Studies and Inhibition with Synthetic Oligoribonucleotides, **226**, 1–6.

Transferrin
X-ray Solution Scattering Reveals Conformational Changes upon Iron Uptake in Lactoferrin, Serum and Ovo-transferrins, **225**, 811–819.
Preliminary Crystallographic Analyses of the N-Terminal Lobe of Recombinant Human Serum Transferrin, **227**, 575–576.

Transforming growth factor α
Human Epidermal Growth Factor. High Resolution Solution Structure and Comparison with Human Transforming Growth Factor α, **227**, 271–282.

Transition state
Structure of the Complex Between Adenylate Kinase from *Escherichia coli* and the Inhibitor Ap_5A Refined at 1·9 Å Resolution. A Model for a Catalytic Transition State., **224**, 159–177.
Kinetic Coupling between Protein Folding and Prolyl Isomerization. I. Theoretical Models, **224**, 217–229.
Kinetic Coupling between Protein Folding and Prolyl Isomerization. II. Folding of Ribonuclease A and Ribonuclease T_1, **224**, 231–240.

Translation
Leftward Ribosome Frameshifting at a Hungry Codon, **223**, 31–40.
Mechanism of Post-segregational Killing by the *hok/sok* System of Plasmid R1. Sok Antisense RNA Regulates *hok* Gene Expression Indirectly Through the Overlapping *mok* Gene, **223**, 41–54.
Importance of mRNA Folding and Start Codon Accessibility in the Expression of Genes in a Ribosomal Protein Operon of *Escherichia coli*, **224**, 949–966.
Mutational Analysis of an Inherently Defective *Translation* Initiation Site, **224**, 1039–1054.
Influence of Codon Context on UGA Suppression and Readthrough, **225**, 261–269.
Translation Inhibition by an mRNA Coding Region Secondary Structure is Determined by Its Proximity to the *AUG* Initiation Codon, **226**, 609–621.
Domains of the *Escherichia coli* Threonyl-tRNA Synthetase Translational Operator and their Relation to Threonine tRNA Isoacceptors, **227**, 621–634.
Protein Folding within the Cell Is Influenced by Controlled Rates of Polypeptide Elongation, **228**, 7–12.
Seven, Eight and Nine-membered Anticodon Loop Mutants of $tRNA_2^{Arg}$ which Cause +1 Frameshifting: Tolerance of DHU Arm and Other Secondary Mutations, **228**, 1042–1054.
Synthetase Competition and tRNA Context Determine the *in Vivo* Identity of tRNA Discriminator Mutants, **228**, 1055–1062.

Translation coupling to transcription
Interdependence of *Translation*, *Transcription* and mRNA Degradation in the *lacZ* Gene, **226**, 581–596.

Translation eIF-3–40 S complex
Eukaryotic Initiation Factor 3 Does Not Prevent Association through Physical Blockage of the Ribosomal Subunit–Subunit Interface, **226**, 301–304.

Translation elongation factors
Kinetic Properties of *Escherichia coli* Ribosomes with Altered Forms of S12, **224**, 1011–1027.

Translation eukaryotic initiation factor 3
Eukaryotic Initiation Factor 3 Does Not Prevent Association through Physical Blockage of the Ribosomal Subunit–Subunit Interface, **226**, 301–304.

Translation factor eUSF
Transcription Factor eUSF is an Essential Component of Isolated Transcription Complexes on the Duck Histone H5 Gene and it Mediates the Interaction of TFIID with a TATA-Deficient Promoter, **223**, 885–898.

Translation factor Tu
Solution Studies of Elongation Factor Tu from the Extreme Halophile *Halobacterium marismortui*, **222**, 361–371.

Translation frameshifting
Leftward Ribosome Frameshifting at a Hungry Codon, **223**, 31–40.
Mutational Analysis of the "Slippery-sequence" Component of a Coronavirus Ribosomal Frameshifting Signal, **227**, 463–479.
Seven, Eight and Nine-membered Anticodon Loop Mutants of $tRNA_2^{Arg}$ which Cause +1 Frameshifting: Tolerance of DHU Arm and Other Secondary Mutations, **228**, 1042–1054.

Translation IF2α
Both Forms of Translational Initiation Factor IF2 (α and β) are Required for Maximal Growth of *Escherichia coli*. Evidence for Two Translational Initiation Codons for IF2β, **225**, 67–80.

Translation IF2β
Both Forms of Translational Initiation Factor IF2 (α and β) are Required for Maximal Growth of *Escherichia coli*. Evidence for Two Translational Initiation Codons for IF2β, **225**, 67–80.

ıslation *in vitro*
Site-directed Mutagenesis of the GTP-binding Domain of β-Tubulin, **227**, 307–321.

ıslation initiation
Nucleotides of tRNA Governing the Specificity of *Escherichia coli* Methionyl-$tRNA_f^{Met}$ Formyltransferase, **224**, 359–367.
Importance of mRNA Folding and Start Codon Accessibility in the Expression of Genes in a Ribosomal Protein Operon of *Escherichia coli*, **224**, 949–966.
Mutational Analysis of an Inherently Defective *Translation* Initiation Site, **224**, 1039–1054.
Eukaryotic Initiation Factor 3 Does Not Prevent Association through Physical Blockage of the Ribosomal Subunit–Subunit Interface, **226**, 301–304.
Interdependence of *Translation*, *Transcription* and mRNA Degradation in the *lacZ* Gene, **226**, 581–596.

ıslation initiation factor 2
Both Forms of Translational Initiation Factor IF2 (α and β) are Required for Maximal Growth of *Escherichia coli*. Evidence for Two Translational Initiation Codons for IF2β, **225**, 67–80.

ıslation metabolic control
Culture Conditions Differentially Affect the *ranslation* of Individual *Escherichia coli* mRNAs, **226**, 597–608.

ıslation nonsense suppression
Influence of Codon Context on UGA Suppression and Readthrough, **225**, 261 269.

ıslation opal
Bar to Normal UGA Translation by the Selenocysteine tRNA, **223**, 9–15.

ıslation selenocysteine
Bar to Normal UGA Translation by the Selenocysteine tRNA, **223**, 9–15.

ıslation signal peptide
Signal Sequences Containing Multiple Aromatic Residues, **224**, 77–85.

ıslation UGA
Bar to Normal UGA Translation by the Selenocysteine tRNA, **223**, 9–15.

ıslational control
Messenger RNA Secondary Structure and Translational Coupling in the *Escherichia coli* Operon Encoding Translation Initiation Factor IF3 and the Ribosomal Proteins, L35 and L20, **228**, 366–386.

ısport bacterial
Crystallization and Preliminary X-ray Studies of the Liganded Lysine, Arginine, Ornithine-binding Protein from *Salmonella typhimurium*, **225**, 1123–1125.

ısposable element
Ulysses Transposable Element of *Drosophila* Shows High Structural Similarities to Functional Domains of Retroviruses, **225**, 917–924.

uclear copper site
Refined *Crystal Structure* of Ascorbate Oxidase at 1·9 Å Resolution, **224**, 179–205.

sephosphate isomerase
Comparison of the Refined *Crystal Structures* of Liganded and Unliganded Chicken, Yeast and Trypanosomal Triosephosphate Isomerase, **224**, 1115–1126.

A
Effect of Conformational Features on the Aminoacylation of tRNAs and Consequences on the Permutation of tRNA Specificities, **226**, 323–333.
Fluorine-19 Nuclear Magnetic Resonance as a Probe of the Solution Structure of Mutants of 5-Fluorouracil-substituted *Escherichia coli* Valine tRNA, **227**, 1164–1172.

A discriminator mutant
Synthetase Competition and tRNA Context Determine the *in Vivo* Identity of tRNA Discriminator Mutants, **228**, 1055–1062.

omyosin
Structure of Tropomyosin at 9 Ångstroms Resolution, **227**, 441–452.

Troponin T
Complete Nucleotide Sequence and Structural Organization of Rat Cardiac Troponin T Gene. A Single Gene Generates Embryonic and Adult Isoforms *via* Development Regulated Alternative Splicing, **227**, 1269–1276.

Trypanosmal triosephosphate isomerase
Comparison of the Refined *Crystal Structures* of Liganded and Unliganded Chicken, Yeast and Trypanosomal Triosephosphate Isomerase, **224**, 1115–1126.

Trypanosoma brucei
Genomic Organization and Context of a Trypanosome Variant Surface Glycoprotein Gene Family, **225**, 961–971.
Sequence Divergence among Members of a Trypanosome Variant Surface Glycoprotein Gene Family, **225**, 973 -983.

Trypanosome variant surface glycoprotein
Genomic Organization and Context of a Trypanosome Variant Surface Glycoprotein Gene Family, **225**, 961–971.
Sequence Divergence among Members of a Trypanosome Variant Surface Glycoprotein Gene Family, **225**, 973–983.

Trypanothione reductase
Active Site of Trypanothione Reductase. A Target for Rational Drug Design, **227**, 322–333.

Tryptophan biosynthesis
Protein Folding within the Cell Is Influenced by Controlled Rates of Polypeptide Elongation, **228**, 7–12.

Tubulin
Low Resolution Structure of Microtubules in Solution. Synchrotron X-ray Scattering and Electron Microscopy of Taxol-induced Microtubules Assembled from Purified Tubulin in Comparison with Glycerol and MAP-induced Microtubules, **226**, 169–184.
α-Tubulin Gene Family of Maize (*Zea mays* L.). Evidence for Two Ancient α-Tubulin Genes in Plants, **227**, 81–96.
Tubulin Gene Expression in Maize (*Zea mays* L.). Change in Isotype Expression along the Developmental Axis of Seedling Root, **227**, 97–107.
Site-directed Mutagenesis of the GTP-binding Domain of β-Tubulin, **227**, 307–321.

Tumour necrosis factor α
Preformed Ribozyme Destroys Tumour Necrosis Factor mRNA in Human Cells, **223**, 831–835.

Tunicate
Tunicate Muscle Actin Genes. Structure and Organization as a Gene Cluster, **227**, 955–960.

Turnip yellow mossaic virus RNA
Mutational Analysis of the Pseudoknot in the tRNA-like Structure of Turnip Yellow Mosaic Virus RNA. Aminoacylation Efficiency and RNA Pseudoknot Stability, **223**, 221–232.

u.v. cross-linking
Direct Binding of Small Nuclear Ribonucleoprotein G to the Sm Site of Small Nuclear RNA. Ultraviolet Light Cross-linking of Protein G to the AAU Stretch Within the Sm Site (AAUUUGUGG) of U1 Small Nuclear Ribonucleoprotein Reconstituted *in Vitro*, **227**, 15–28.

Ubiquitin
Crystallization and Preliminary X-ray Investigation of a Ubiquitin Carrier Protein (E2) from *Arabidopsis thaliana*, **223**, 1183–1186.

Umbrella sampling
Binding of an Antiviral Agent to a Sensitive and a Resistant Human Rhinovirus. Computer Simulation Studies with Sampling of Amino Acid Side-chain Conformations. I. Mapping the Rotamers of Residue 188 of Viral Protein 1, **225**, 679–696.

H_2-uptake
Nucleotide Sequence and Organization of an H_2-uptake Gene Cluster from *Rhizobium leguminosarum* bv. viciae Containing a Rubredoxin-like Gene and Four Additional Open Reading Frames, **228**, 998–1002.

Urea
Temperature Dependence of the Kinetics of the Urea-induced Dissociation of Human Plasma α_2-Macroglobulin into Half-molecules. A Minimum Rate at 15°C Indicates Hydrophobic Interaction between the Subunits, **225**, 551–556.
^{1}H Nuclear Magnetic Resonance Studies of the Interaction of Urea with Hen Lysozyme. Origins of the Conformational Change Induced in Hen Lysozyme by *N*-Acetylglucosamine Oligosaccharides, **227**, 9–14.

Urease
Preliminary Crystallographic Studies of Urease from Jack Bean and from *Klebsiella aerogenes*, **227**, 934–937.

Uteroglobin
Refined *Structure* of Rat Clara Cell 17 kDa Protein at 3·0 Å Resolution, **224**, 441–448.

V79 cells
Spectrum of Spontaneously Occurring Mutations in the *hprt* Gene of V79 Chinese Hamster Cells, **223**, 627–635.

Vimentin
Identification of a Nonapeptide Motif in the Vimentin Head Domain Involved in Intermediate Filament Assembly, **223**, 637–650.
Characterization of the Nucleic Acid-binding Activities of the Isolated Amino-terminal Head Domain of the Intermediate Filament Protein Vimentin Reveals its Close Relationship to the DNA-binding Regions of some Prokaryotic Single-stranded DNA-binding Proteins, **228**, 41–57.

Viral capsid protein
Conformational Changes of a Viral Capsid Protein. Thermodynamic Rationale for Proteolytic Regulation of Bacteriophage T4 Capsid Expansion, Co-operativity, and Super-stabilization by Soc Binding, **228**, 870–884.

Viroid
Structural Requirements for Viroid Processing by RNase T1, **227**, 719–737.

Virus assembly
Construction of a Microphage Variant of Filamentous Bacteriophage, **228**, 720–724.
Terminating a Macromolecular Helix. Structural Model for the Minor Proteins of Bacteriophage M13, **228**, 885–892.

Virus stability
Model for the Differential Stabilities of Rhinovirus and Poliovirus to Mild Acidic pH, Based on Electrostatics Calculations, **223**, 247–257.

Virus structure
Model for the Differential Stabilities of Rhinovirus and Poliovirus to Mild Acidic pH, Based on Electrostatics Calculations, **223**, 247–257.
Crystallization and Preliminary X-ray Diffraction Studies of Coxsackievirus B1, **223**, 1171–1175.
Crystallization of Sindbis Virus and its Nucleocapsid, **226**, 277–280.
Three-dimensional Structure of a Cloning Vector. X-ray Diffraction Studies of Filamentous Bacteriophage M13 at 7 Å Resolution, **226**, 455–470.
Anatomy and Evolution of Proteins Displaying the Viral Capsid Jellyroll Topology, **228**, 220–242.
Structure of the U2 Strain of Tobacco Mosaic Virus Refined at 3·5 Å Resolution Using X-ray Fiber Diffraction, **228**, 516–528.
Preliminary Crystallographic Study of Bluetongue Virus Capsid Protein, VP7, **228**, 687–689.
Construction of a Microphage Variant of Filamentous Bacteriophage, **228**, 720–724.
Terminating a Macromolecular Helix. Structural Mod for the Minor Proteins of Bacteriophage M13, 22 885–892.
Crystallization and Preliminary X-ray Analysis of Thr Serotypes of Foot-and-Mouth Disease Virus, 22 1263–1268.

Vitellogenin
Sequence of Lamprey Vitellogenin. Implications for t Lipovitellin *Crystal Structure*, **226**, 903–907.

Wheat
Extreme Divergence of a Novel Wheat Thionin Generat by a Mutational Burst Specifically Affecting t Mature Protein Domain of the Precursor, 22 1003–1009.

Xenopus
Specific Interaction of the First Three Zinc Fingers TFIIIA with the Internal Control Region of the *Xen pus* 5 S RNA Gene, **223**, 857–871.
Kinetic Control of 5 S RNA Gene Transcription, 22 1009–1018.

Xeroderma pigmentosum
Modulation of Ultraviolet Light Mutational Hotspots Cellular Stress, **228**, 1031–1036.

Xylanase
Crystallization and Preliminary X-ray Diffraction Anal sis of the Catalytic Domain of Cex, an Exo-β-1 glucanase and β-1,4-xylanase from the Bacterium *C lulomonas fimi*, **228**, 693–695.

YACs
Structure of the Pericentric Long Arm Region of t Human Y Chromosome, **228**, 421–432.

Yeast
Functional Analysis of Internal Transcribed Spacer 2 *Saccharomyces cerevisiae* Ribosomal DNA, 22 899–910.
Identification of Cryptic *lox* Sites in the Yeast Genome Selection for Cre-mediated Chromosome Tra locations that Confer Multiple Drug Resistance, 22 911–928.
The *mcm2* Mutation of Yeast Affects Replication, Rath than Segregation or Amplification of the Two Micr Plasmid, **224**, 545–558.
Site-specific Recombinase, R, Encoded by Yeast Plasm pSR1, **225**, 25–37.
Amino Acid Sequence of Yeast Hemoglobin. A Tv domain Structure, **227**, 948–954.
Protein Folding within the Cell Is Influenced by C trolled Rates of Polypeptide Elongation, **228**, 7–12
Crystallization and Preliminary X-ray Investigation Phosphoribosylaminoimidazolesuccinocarboxamide Synthase from the Yeast *Saccharomyces cerevisiae*, 22 298–299.
Structure Analysis of the 5′ External Transcribed Spa of the Precursor Ribosomal RNA From *Saccharomy cerevisiae*, **228**, 827–839.

y-RPA
Characterization of DNA-binding and Strand-excha Stimulation Properties of y-RPA, a Yeast Sing strand-DNA-binding Protein, **227**, 54–71.

Zinc
Zinc Induces a Bend Within the Transcription Fac IIIA-binding Region of the 5 S RNA Gene, 22 1115–1123.
Role of B13 Glu in Insulin Assembly. The Hexamer Str ture of Recombinant Mutant (B13 Glu→Gln) Insul **228**, 1163–1176.

c finger
Structure of the TFIIIA–5 S DNA Complex, **227**, 407–417.
Adjacent Zinc-finger Motifs in Multiple Zinc-finger Peptides from SWI5 Form Structurally Independent, Flexibly Linked Domains, **228**, 619–636.
Solution Structures of Two Zinc-finger Domains from SWI5 Obtained Using Two-dimensional ^{1}H Nuclear Magnetic Resonance Spectroscopy. A Zinc-finger Structure with a Third Strand of β-Sheet, **228**, 637–651.
